Rise and Kill First Ronen Bergman, 2018-01-30 NEW YORK TIMES BESTSELLER • The first definitive history of the Mossad, Shin Bet, and the IDF's targeted killing programs, hailed by The New York Times as "an exceptional work, a humane book about an incendiary subject." WINNER OF THE NATIONAL JEWISH BOOK AWARD IN HISTORY NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY JENNIFER SZALAI, THE NEW YORK TIMES NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Economist • The New York Times Book Review • BBC History Magazine • Mother Jones • Kirkus Reviews The Talmud says: "If someone comes to kill you, rise up and kill him first." This instinct to take every measure, even the most aggressive, to defend the Jewish people is hardwired into Israel's DNA. From the very beginning of its statehood in 1948, protecting the nation from harm has been the responsibility of its intelligence community and armed services, and there is one weapon in their vast arsenal that they have relied upon to thwart the most serious threats: Targeted assassinations have been used countless times, on enemies large and small, sometimes in response to attacks against the Israeli people and sometimes preemptively. In this page-turning, eye-opening book, journalist and military analyst Ronen Bergman—praised by David Remnick as "arguably [Israel's] best investigative reporter"—offers a riveting inside account of the targeted killing programs: their successes, their failures, and the moral and political price exacted on the men and women who approved and carried out the missions. Bergman has gained the exceedingly rare cooperation of many current and former members of the Israeli government, including Prime

Ministers Shimon Peres, Ehud Barak, Ariel Sharon, and Benjamin Netanyahu, as well as high-level figures in the country's military and intelligence services: the IDF (Israel Defense Forces), the Mossad (the world's most feared intelligence agency), Caesarea (a "Mossad within the Mossad" that carries out attacks on the highest-value targets), and the Shin Bet (an internal security service that implemented the largest targeted assassination campaign ever, in order to stop what had once appeared to be unstoppable: suicide terrorism). Including never-before-reported, behind-the-curtain accounts of key operations, and based on hundreds of on-the-record interviews and thousands of files to which Bergman has gotten exclusive access over his decades of reporting, *Rise and Kill First* brings us deep into the heart of Israel's most secret activities. Bergman traces, from statehood to the present, the gripping events and thorny ethical questions underlying Israel's targeted killing campaign, which has shaped the Israeli nation, the Middle East, and the entire world. "A remarkable feat of fearless and responsible reporting . . . important, timely, and informative."—John le Carré

McMafia Misha Glenny, 2009-01-19 Drugs, weapons, migrant labour, women — these are just a few of the many goods that effortlessly cross national borders in this globalized age, often without the knowledge or permission of the nations concerned. How is this remarkable criminal feat managed? From gun runners in the Ukraine, to money launderers in Dubai, cyber criminals in Brazil, racketeers in Japan, and the booming marijuana industry in western Canada, *McMafia* builds a breathtaking picture of a secret and bloody business. Internationally celebrated writer Misha Glenny crafts a fascinating, highly readable, and impressively well-researched account of the emergence of organized crime as a globalized phenomenon and shows how its secret and bloody business mirrors both the methods and the rewards of the legitimate world economy. Employing his journalistic talent and his prior experience covering organized crime in Eastern Europe, Glenny reports on his travels

around the planet to investigate this worrying and worsening situation. After comprehensively surveying the criminal scene, Glenny ends by considering the future of organized crime. *McMafia* is an important book that assembles all the pieces of this worldwide puzzle for the first time.

The Chief Culprit Viktor Suvorov, 2013-03-15 Bestselling author Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to

conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

Rockets and People Volume I (NASA History Series. NASA Sp-2005-4110) Boris Chertok, 2005-01-01 Much has been written in the West on the history of the Soviet space program, but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoir of academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Thirty years later, he was deputy to the founding figure of the Soviet space program, the mysterious Chief Designer Sergey Korolev. Chertok's 60-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes (volumes two through four are forthcoming), academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. This book was edited by Asif Siddiqi, a historian of Russian space exploration, and General Tom Stafford contributed a foreword touching upon his significant work with the Russians on the Apollo-Soyuz Test Project. Overall, this book is an engaging read while also contributing much new material to the literature about the Soviet space program.

Russia and the Arms Trade Ian Anthony, Stockholm International Peace Research Institute, 1998 For this study, a group of Russian authors were commissioned to describe and assess the arms trade policies and practices of Russia under new domestic and international conditions. The contributors, drawn from the government, industry, and academic communities, offer a wide range of reports on the political, military, economic, and industrial implications of Russian arms

transfers, as well as specific case studies of key bilateral arms transfer relationships.

Tactical Nuclear Weapons and NATO Douglas T. Stuart, 2012 is understudied, both inside and outside of government. Tactical weapons, although less awesome than their strategic siblings, carry significant security and political risks, and they have not received the attention that is commensurate to their importance. Second, it is clear that whatever the future of these arms, the status quo is unacceptable. It is past the time for NATO to make more resolute decisions, find a coherent strategy, and formulate more definite plans about its nuclear status. Consequently, decisions about the role of nuclear weapons within the Alliance and the associated supporting analysis are fundamental to the future identity of NATO. At the Lisbon Summit in Portugal in November 2010, the Alliance agreed to conduct the Deterrence and Defense Posture Review (DDPR). This effort is designed to answer these difficult questions prior to the upcoming NATO Summit in May 2012.

Physical and Mathematical Modeling of Earth and Environment Processes Vladimir Karev, Dmitry Klimov, Konstantin Pokazeev, 2018-03-24 This book is the result of collaboration within the framework of the Third International Scientific School for Young Scientists held at the Ishlinskii Institute for Problems in Mechanics of Russian Academy of Sciences, 2017, November. The papers included describe studies on the dynamics of natural system - geosphere, hydrosphere, atmosphere—and their interactions, the human contribution to naturally occurring processes, laboratory modeling of earth and environment processes, and testing of new developed physical and mathematical models. The book particularly focuses on modeling in the field of oil and gas production as well as new alternative energy sources.

The Next Arms Race Henry D. Sokolski, 2015-01-31 With most of the world's advanced

economies now stuck in recession; Western support for defense cuts and nuclear disarmament increasing; and a major emerging Asian power at odds with its neighbors and the United States; it is tempting to think our times are about to rhyme with a decade of similar woes—the disorderly 1930s. Might we again be drifting toward some new form of mortal national combat? Or, will our future more likely ape the near-half-century that defined the Cold War—a period in which tensions between competing states ebbed and flowed but peace mostly prevailed by dint of nuclear mutual fear and loathing? The short answer is, nobody knows. This much, however, is clear: The strategic military competitions of the next 2 decades will be unlike any the world has yet seen. Assuming U.S., Chinese, Russian, Israeli, Indian, French, British, and Pakistani strategic forces continue to be modernized and America and Russia continue to reduce their strategic nuclear deployments, the next arms race will be run by a much larger number of contestants—with highly destructive strategic capabilities far more closely matched and capable of being quickly enlarged than in any other previous period in history.

Theory of Elasticity and Plasticity Valentin Molotnikov, Antonina Molotnikova, 2021-04-12 This book serves as a core text for university curricula in solid body mechanics and, at the same time, examines the main achievements of state of the art research in the mechanics of elastic and non-

elastic materials. This latter goal of the book is achieved through rich bibliographic references, many from the authors' own work. Distinct from similar texts, there are no claims in this volume to a single universal theory of plasticity. However, solutions are given to some new problems and to the construction of models useful both in pedagogic terms for students and practical terms for professional design engineers. Examples include the authors' decisions about the Brazilian test, stability of rock exposure, and pile foundations. Designed for both upper-level university students and specialists in the mechanics of deformable hard body, the material in this book serves as a source for numerous topics of course and diploma concentration.

It concisely summarizes the state of the art in topical and critical reviews written by professionals in this and related fields.

Buy, Build, Or Steal Phillip Charles Saunders, Joshua K. Wiseman, 2011 This study identifies potential aviation technology development and procurement strategies, presents a general model of the options available to developing countries, and applies that model to explain Chinese procurement and aviation technology acquisition efforts over the last 60 years. The model articulates three main technology procurement avenues: purchase (buy), indigenous development (build), and espionage (steal), and three subavenues: reverse engineering (combining buy/steal and build), coproduction (combining buy and build), and codevelopment (combining buy and build, with an emphasis on build). It examines the costs, benefits, and tradeoffs inherent in each approach. Four variables influence decisions about the mix of strategies: (1) a country's overall level of economic development, in particular the state of its technical/industrial base; (2) the technological capacity of

a country's military aviation sector; (3) the willingness of foreign countries to sell advanced military aircraft, key components, armaments, and related production technology; and (4) the country's bargaining power vis-avis potential suppliers.
