The Sukhoi Su-24 Stanislaw Krzysztof Mokwa,2020-02-19 Su-24 (Fencer) is a Soviet jet bomber with variable-geometry wings. The aircraft was supposed to be a response to the American F-111, and therefore it's structurally similar. Su-24 can operate in any weather conditions, also at night. It was designed to carry tactical nuclear weapons. In the 1960s, the military command of the Soviet Union set requirements for a new attack aircraft that would be able to operate despite strong ant-aircraft defense of NATO troops. An aircraft was expected to fly on a very low altitude at a very high speeds. Initially, it was based on Su-7 and Su-15 airframes, but due to the decision to use variable-geometry wing, it was necessary to build a completely new structure. Variable geometry allowed to achieve high speeds while maintaining good takeoff and landing characteristics. This is how Su-24 was born. The first prototype was flown on July 2, 1967 (marked as T6-1), and the second on January 17, 1970 (T6-2I). Variable-geometry wings were only used in the second prototype. In December 1971, the first serial Su-24 was built, but due to the prolonged acceptance tests (lasting until 1974), the aircraft officially did not become operational until February 1975. Su-24 was named Fencer in the NATO code.

Duks in Royal Serbian Air Force Dragan Z. Saler,Aleksandar M. Ognjevic,2021-01-31 In mid-1909, Meller's factory made the first aircraft, according to the brothers Wright model of Flyer A. It was constructed by experienced factory engineer Jevgrafov (Н.П. Евграфов). He was already engaged on the project and construction of the Duks airship Jastreb (Ястреб), so that he was familiar with all the structural elements of aircraft. The test flights were not performed because the factory couldn't provide the appropriate engine. The aircraft was nevertheless shown at an aviation exhibit at the end of 1909, together with the aircraft of famous

manufacturers from Europe. Meller realized on time that Russia could not long fall behind the advanced European countries in the aeronautics development, especially the military one. His plan was that the Duks factory should soon start producing aircraft in larger series, initially under license. The problem was that he should choose the right model of the many that broke records every day in those years. During 1910, Henry Farman HF III aircraft became extremely popular in France, despite their structural imperfection. They were made in two versions, for training and for competition. They had a series of record flights and they often won prizes on many aeronautical competitions. They served as models to many constructors even beyond the borders of France. It was this very aircraft that Meller chose for serial production.

Douglas A-20 Havoc Pilot's Flight Operating Instructions United States Air Force, USAF, 2008-09-01 Designed by Douglas Aviation engineer Ed Heinemann, the A-20 Havoc and its variants served in the U.S. Army Air Force and those of several allies. The plane was configured for attack, night fighter, and bomber roles, and nearly 7,500 were built from 1939 through 1944. The first order for the Havoc came from the French, who extensively tested the prototype aircraft after the USAAF failed to place an order. The French insisted on modifications that included new 1000 hp Pratt & Whitney engines (later upgraded to 1100 hp) and a narrower fuselage. The improved A-20's

speed and handling compared favorably to a fighter aircraft. Little wonder it became one of the most extensively-built light bombers of WWII. Originally printed by the U.S. Army Air Force and Douglas, this handbook provides a fascinating glimpse inside the cockpit of this warbird. Originally classified 'Restricted', the manual was declassified and is here reprinted in book form.

We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are

difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these paperbacks as a service so you don't have to. The books are compact, tightly-bound paperback, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a SDVOSB. <https://usgovpub.com>

Su-22 M4/Um3k Krzysztof Barcz,Dariusz Warszawski,2009-12-15 * Includes free decals and masking foil * Packed with photos and including three color profiles The SU-22 was designed as a high speed, medium range, low level ground attack and reconnaissance aircraft. Although its origin can be traced back to the basic SU7 aircraft of the 1950's, the design was continuously developed emerging as the variable geometry (Swing-wing 30:63) SU17 / 22, the most modern and powerful Warsaw Pact fighter bomber. The intent of the design was to have trouble free use under the most demanding operating and environmental conditions combined with ease of maintenance. The SU22 M4 is still widely used in Europe and the Middle East, being broadly compatible to

a Tornado GR1 although lacking the latter's all-weather capability. Like the Tornado it is equipped with a laser range finder designator and terrain following radar and could be equipped with bombs, guided missiles and rockets in addition to the installed twin 30mm canon for the air to surface attack role. Air-to-air threats were countered via rockets, guided missiles and canon. This is a Monograph on this supersonic fighter bomber, containing 165 photos, including numerous color photos with English/Polish photo captions, featuring external and internal views, and 3 color profiles. Includes a free decal sheet. About the Series This is a classic series of highly illustrated books on the best machines of war, with several hundred photographs of each aircraft or vehicle. With close-up views of the key features of each machine, including its variations, markings and modifications, customizing and creating a model has never been easier. Includes extra features such as decals and masking foil.
