Flight Test System Identification Roger Larsson,2019-05-15 With the demand for more advanced fighter aircraft, relying on unstable flight mechanical characteristics to gain flight performance, more focus has been put on model-based system engineering to help with the design work. The flight control system design is one important part that relies on this modeling. Therefore, it has become more important to develop flight mechanical models that are highly accurate in the whole flight envelope. For today's modern fighter aircraft, the basic flight mechanical characteristics change between linear and nonlinear as well as stable and unstable as an effect of the desired capability of advanced maneuvering at subsonic, transonic and supersonic speeds. This thesis combines the subject of system identification, which is the art of building mathematical models of dynamical systems based on measurements, with aeronautical engineering in order to find methods for identifying flight mechanical characteristics. Here, some challenging aeronautical identification problems, estimating model parameters from flight-testing, are treated. Two aspects are considered. The first is online identification during flight-testing with the intent to aid the engineers in the analysis process when looking at the flight mechanical characteristics. This will also ensure that enough information is available in the resulting test data for post-flight analysis. Here, a frequency domain method is used. An existing method has been developed further by including an Instrumental Variable approach to take care of noisy data including atmospheric turbulence and by a sensor-fusion step to handle varying excitation during an experiment. The method treats linear systems that can be both stable and unstable working under feedback control. An experiment has been performed on a radio-controlled demonstrator aircraft. For this, multisine input signals have been designed and the results show that it is possible to perform more time-efficient flight-testing compared with standard input signals. The other aspect is post-flight identification of nonlinear characteristics. Here the properties of a parameterized observer approach, using a prediction-error method, are investigated. This approach is compared with four other methods for some test cases. It is shown that this parameterized observer approach is the most robust one with respect to noise disturbances and initial offsets. Another attractive property is that no user parameters have to be tuned by the engineers in order to get the best performance. All methods in this thesis have been validated on simulated data where the system is known, and have also been tested on real flight test data. Both of the investigated approaches show promising results.

Lightweight and Sustainable Materials for Automotive Applications Omar Faruk,Jimi Tjong,Mohini Sain,2017-06-01 Automotive manufacturers are required to decrease CO2 emissions and increase fuel economy while assuring driver comfort and safety. In recent years, there has been rapid development in the application of lightweight and sustainable materials in the automotive industry to help meet these criteria. This book provides critical reviews and the latest research results of various lightweight and sustainable materials in automotive applications. It discusses current applications and future trends of lightweight materials in the automotive area. While there are a few books published mainly focusing on automotive applications of metallic lightweight materials, to date there is no available book focusing on a broad spectrum of lightweight materials, including metal, plastic, composites, bio-fiber, bio-polymer, carbon fiber, glass fiber,

nanomaterials, rubber materials, and foaming materials, as this work does. The book also includes case studies of commercial lightweight automotive parts from sustainable lightweight materials, providing an invaluable resource to those involved in this in-demand research and commercialization area.

A Hard Look at Hard Power Gary James Schmitt,2020 With the United States facing two major revisionist powers, Russia and China, as well as additional security threats from North Korea, Iran, and jihadist terrorism, a critical advantage for the United States is its global network of alliances and strategic partners. As the 2018 National Defense Strategy states, 'Alliances and partnerships are crucial to our strategy, providing a durable asymmetric strategic advantage that no competitor or rival can match.' The advantage of having military allies and partners is enhanced by the core capacity of the American military having remained largely the same over the past decade, though the global security environment grew more complex and difficult during that time. In short, the United States needs allies and security partners. But the United States needs allies and partners that can pull their weight militarily if the country is going to be able to maintain a favorable balance of power in critical regions of the world. The second edition of A Hard Look at Hard Power provides an in-depth examination of the overall strategic perspective, defense plans, budgets, and capabilities of seven key European and Asian allies, three frontline strategic partners, and NATO--Publisher's web site.

Understanding Space Strategy John J. Klein,2019-03-07 This book examines the rise of great power competition in space, including the relevant and practical space strategies for China, Russia, the United States, and other countries. The work discusses the concepts and writings of past strategists, such as Thucydides, Sun Tzu, and Clausewitz, in relation to warfare initiated in or extending into space. This analysis underscores why polities initiate war based upon an assessment of fear, honor, and interest, and explains why this will also be true of war in space. Based upon the timeless strategic writings of the past, the book uncovers the strategy of space warfare, along with the concepts of deterrence, dissuasion, and the inherent right of self-defense, and outlines strategies for great, medium, and emerging space powers. Additionally, it highlights changes needed to space strategy based upon the Law of Armed Conflict, norms of behavior, and Rules of Engagement. The work also examines advancements and emerging trends in the commercial space sector, as well as what these changes mean for the implementation of a practical space strategy. Given the rise of great power competition in space, this work presents a space strategy based upon historical experience. This book will be of much interest to students of space policy, strategic studies, and International Relations.

Islamic Atomic Bomb Cookbook Fartash Barvarz,2010 Relations between Iran and Pakistan improved after the removal of the Taliban in 2002, but regional rivalry continues. Sunni-majority Pakistan sides with fellow Sunni Muslim Saudi Arabia in its competition with Shiite majority Iran for influence across the broader Islamic world, although Pakistan is far less ideological than either

country, and is more concerned with influence in Central Asia rather than in the Arab world. Iran considers northern and western Afghanistan as its sphere of influence since its population is Persian Dari speaking. Pakistan considers southern and eastern Afghanistan as its sphere of influence since it is Pashto and Baloch speaking like the North-West Frontier Province and Pakistani Baluchistan, respectively. Pakistan expressed concern over India's plan to build a highway linking the southern Afghanistan city of Kandahar to Zahidan, since it will reduce Afghanistan's dependence on Pakistan to the benefit of Iran. It was confirmed that Pakistan built Soviet-style road-mobile missiles, state-of-the-art air defenses around strategic sites, and undertook other concealment measures. Pakistani defense officials have continued to rebuff and deflect American requests for more details about the location and security of the country's nuclear sites. The author provides background on the Islamic nuclear programs in Iran, Pakistan, and India.
