Sukhoi Su-25 Frogfoot Alexander Mladenov,2013-09-17 Like the American A-10 Warthog, the first Soviet jet dedicated by design to CAS (Close Air Support), the 'Frogfoot' has durability and firepower. In February 2012, the Sukhoi Su-25 (NATO reporting name Frogfoot) celebrated 37 years of its maiden flight, 31 years of its formal induction into squadron service and 25 years of its formal entry into service with the Soviet Air Force. It was the Soviet Air Force's first mass-produced jet purposely designed for the Close Air Support (CAS) role and is a simple, effective and durable attack workhorse that, by 2012, had seen combat in no fewer than 40 conflicts. The Su-25 received its baptism of fire five years after its maiden flight, during Operation Romb in Afghanistan in 1980. This operation saw the new aircraft go through its field evaluation and testing in real-world war conditions. As many as 630 Su-25 Frogfoot-As were built between 1979 and 1991 at the Georgia-based aircraft plant now known as TAM (Tbilisi Aircraft Manufacturing) for the Soviet Air Force, as well as 185 Su-25Ks for export, while no fewer than 70 Su-25UB/UBK Frogfoot-B two-seaters rolled off the production line at the aviation plant in Ulan Ude (UUAP), Russia. Currently, there are plans to resume production of the two-seater variant with state-of-the-art avionics and the latest weaponry to replace those Su-25s dating from the mid/late 1980s that are still in service. The Frogfoot is known as the most cost-effective ground attack aircraft available to the Russian Air Force (RuAF) and, between the RuAF and the Russian Navy's aviation assets, there are some 200-220 Su-25s still in operation today, though only half of that number is airworthy at any one time. As with many Soviet designs, the Su-25 has been widely exported, with 25 nations operating variants of the Frogfoot at one time or another, and it remains in service 19 of these states - a testament to its effectiveness and reliability.

Su-25 'Frogfoot' Units In Combat Alexander Mladenov,2015-04-20 This volume details the technical features and operational performance of the Soviet Su-25 'Frogfoot', which proved itself as a durable and versatile attack aircraft in a variety of theatres such as Afghanistan, Georgia and Ossetia. Today it is widely accepted as the true successor to the types of specialised ground--attack aircraft that emerged during World War II. This book illuminates the service history of the 'Frogfoot' in over 30 years of combat using first-hand accounts and revealing archive photographs. The awkward-looking Su-25 has often been underrated, but the faithful 'Frogfoot' is now slated to remain in service with most of its current operators across the globe until at least 2020. This study explores the successes of the 'Frogfoot' in full, demonstrating its strengths as a formidably armed, armoured and very agile attack aircraft.

Visual Aircraft Recognition U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Russia's Military Modernisation: An Assessment The International Institute for Strategic Studies (IISS), 2020-09-29 This new IISS Strategic Dossier examines the recent development of Moscow's armed forces and military capabilities. It analyses the aspirations underpinning Russia's military reform programme and its successes as well as its failures. The book also provides insights into Russia's operational use of its armed forces, including in the intervention in Syria, the goals and results of recent state armament programmes, and the trajectory of future developments. This full-colour volume includes more than 50 graphics, maps and charts and over 70 images, and contains chapters on: Russia's armed forces since the end of the Cold War Strategic forces Ground forces Naval forces Aerospace forces Russia's approach to military decision-making and joint operations Economics and industry At a time when Russia's relations with many of its neighbours are increasingly strained, and amid renewed concern about the risk of an armed clash, this dossier is essential reading for understanding the state, capabilities and future of Russia's armed forces.

Predator Matt J. Martin, Charles W. Sasser, 2010-11-01 The Nintendo generation has taken to the battlefields of

Iraq and Afghanistan where remotely controlled aircraft are killing Americans enemies and saving American lives. Matt J. Martin is considered a top gun in the world of unmanned aerial vehicles (UAVs). For nearly four years, he has flown hundreds of missions on two warfronts in a new kind of combat that, until recently, was largely classified Top Secret. He and his fellow Predator pilots have been actively involved in virtually every facet of the War on Terror in Iraq and Afghanistan: tracking Osama bin Laden; capturing top al-Qaeda leader al-Zarqawi; fighting with the U.S. Marines in Fallujah; and rescuing aid workers kidnapped in Afghanistan by the Taliban. This is Matt J. Martin's story and that of his aircraft, the 27-foot long Predator.

Losing Military Supremacy Andrei Martyanov, 2018-06-04 Martyanov explains why and how the US armed forces have lost the military supremacy they thought they once had and how Russia, which supposedly had been defeated in the Cold War, succeeded not only in catching up with USA, but actually surpassing it in many key domains such as long range cruise missiles, diesel-electric submarines, air defenses, electronic warfare, air superiority and many others. Andrei Martyanov's book is an absolute 'must read' for any person wanting to understand the reality of modern warfare and super-power competition. THE SAKER While exceptionalism is not unique to America, the intensity of their conviction and its global ramifications are. This view of its exceptionalism has led the US to grossly misinterpret—sometimes deliberately—the causative factors of key events of the past two centuries. Accordingly, the wrong conclusions have been derived, and very wrong lessons learned. Nowhere has this been more manifest than in American military thought and its actual application of military power. Time after time the American military has failed to match lofty declarations about its superiority, producing instead a mediocre record of military accomplishments. Starting from the Korean War the United States hasn't won a single war against a technologically inferior, but mentally tough enemy. The technological dimension of American “strategy” has completely overshadowed any concern with the social, cultural, operational and even tactical requirements of military (and political) conflict. With a new Cold War with Russia emerging, the United States enters a new period of geopolitical turbulence completely unprepared in any meaningful way—intellectually, economically, militarily or culturally—to face a reality which was hidden for the last 70+ years behind the curtain of never-ending Chalabi moments and a strategic delusion concerning Russia, whose history the US viewed through a Solzhenitsynified caricature kept alive by a powerful neocon lobby, which even today dominates US policy makers' minds. Martyanov's former Soviet military background enables deep insight into the fundamental issues of warfare and military power as a function of national power—assessed correctly, not through the lens of Wall Street “economic” indices and a FIRE economy, but through the numbers of enclosed technological cycles and culture, much of which has been shaped in Russia by continental warfare and which is practically absent in the US.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed, 2017-07-06 Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book's first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be

studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.

Increasing Small Arms Lethality In Afghanistan: Taking Back The Infantry Half-Kilometer Major Thomas P. Ehrhart, 2015-11-06 Operations in Afghanistan frequently require United States ground forces to engage and destroy the enemy at ranges beyond 300 meters. These operations occur in rugged terrain and in situations where traditional supporting fires are limited due to range or risk of collateral damage. With these limitations, the infantry in Afghanistan require a precise, lethal fire capability that exists only in a properly trained and equipped infantryman. While the infantryman is ideally suited for combat in Afghanistan, his current weapons, doctrine, and marksmanship training do not provide a precise, lethal fire capability to 500 meters and are therefore inappropriate. Comments from returning non-commissioned officers and officers reveal that about fifty percent of engagements occur past 300 meters. The enemy tactics are to engage United States forces from high ground with medium and heavy weapons, often including mortars, knowing that we are restricted by our equipment limitations and the inability of our overburdened soldiers to maneuver at elevations exceeding 6000 feet. Current equipment, training, and doctrine are optimized for engagements under 300 meters and on level terrain There are

several ways to extend the lethality of the infantry. A more effective 5.56-mm bullet can be designed which provides enhanced terminal performance out to 500 meters. A better option to increase incapacitation is to adopt a larger caliber cartridge, which will function using components of the M16/M4. The 2006 study by the Joint Service Wound Ballistics-Integrated Product Team discovered that the ideal caliber seems to be between 6.5 and 7-mm. This was also the general conclusion of all military ballistics studies since the end of World War I.

Iran's Rocket and Missile Forces and Strategic Options Anthony H. Cordesman, 2015-01-23 Iran's rocket and missile forces serve a wide range of Iranian strategic objectives. This study examines how Iran's forces and systems are steadily evolving.

The Sukhoi Su-24 Stanislaw Krzysztof Mokwa, 2020-02-19 Su-24 (Fencer) is a Soviet jet bomber with variable-geometry wings. The aircraft was supposed to be a response to the American F-111, and therefore it's structurally similar. Su-24 can operate in any weather conditions, also at night. It was designed to carry tactical nuclear weapons. In the 1960s, the military command of the Soviet Union set requirements for a new attack aircraft that would be able to operate despite strong anti-aircraft defense of NATO troops. An aircraft was expected to fly on a very low altitude at a very high speeds. Initially, it was based on Su-7 and Su-15 airframes, but due to the decision to use variable-geometry wing, it was necessary to build a completely new structure. Variable geometry allowed to achieve high speeds while maintaining good takeoff and landing characteristics. This is how Su-24 was born. The first prototype was flown on July 2, 1967 (marked as T6-1), and the second on January 17, 1970 (T6-2I). Variable-geometry wings were only used in the second prototype. In December 1971, the first serial Su-24 was built, but due to the prolonged acceptance tests (lasting until 1974), the aircraft officially did not become operational until February 1975. Su-24 was named Fencer in the NATO code.
