**Witness to Hope** George Weigel, 2009-10-13 INTERNATIONAL BESTSELLER A remarkable book. Weigel's biography is likely to remain the standard one-volume reference on John Paul II for many years to come. – Pittsburgh Post-Gazette ?“Fascinating. . . sheds light on the history of the twentieth century for everyone.” –New York Times Book Review The definitive biography of Pope John Paul II that explores how influential he was on the world stage and in some of the most historic events of the twentieth century that can still be felt today Witness to Hope is the authoritative biography of one of the singular figures–some might argue the singular figure–of our time. With unprecedented cooperation from John Paul II and the people who knew and worked with him throughout his life, George Weigel offers a groundbreaking portrait of the Pope as a man, a thinker, and a leader whose religious convictions defined a new approach to world politics–and changed the course of history. As even his critics concede, John Paul II occupied a unique place on the world stage and put down intellectual markers that no one could ignore or avoid as humanity entered a new millennium fraught with possibility and danger. The Pope was a man of prodigious energy who played a crucial, yet insufficiently explored, role in some of the most momentous events of our time, including the collapse of European communism, the quest for peace in the Middle East, and the democratic transformation of Latin America. With an updated preface, this edition of Witness to Hope explains how this “man from a far country” did all of that, and much more–and what both his accomplishments and the unfinished business of his pontificate mean for the future of the Church and the world.

*The Psychology of Entrepreneurship* J. Robert Baum, Michael Frese, Robert A. Baron, 2014-04-16 Entrepreneurship is essential for international social and economic well-being, as new ventures are the dominant source of job creation, market innovation, and economic growth in many societies. In this book, a noted group of researchers use findings, methods, and theories of modern psychology as the basis for gaining important, new insights into entrepreneurship–and into the hearts and minds of the talented, passionate professionals who create new business ventures. *The Psychology of Entrepreneurship*, a volume in the SIOP Organizational Frontiers Series, is the first book written about the psychology of entrepreneurship, and includes over 60 research questions to guide industrial organizational psychology, organizational behavior, and entrepreneurship research about entrepreneurs. It seeks to answer questions such as, how and why do some people, but not others, recognize opportunities, decide to start new ventures, and organize successful, rapidly growing new ventures? Some topics addressed include: methods to help researchers explore the domain of entrepreneurship research; the entire process of starting a new business; characteristics of the individual entrepreneur; the history of entrepreneurship education; the cross-cultural effects of entrepreneurship; and the viewpoints of seasoned psychologists who analyze current entrepreneurship research methods. This book will appeal to teachers, students, and researchers in the areas of industrial organizational psychology, organizational behavior, entrepreneurship, and management.

**Relict Species** Jan Christian Habel, Thorsten Assmann, 2009-12-03 Mankind has evolved both genetically and culturally to become a most successful and dominant species. But we are now so numerous and our technology is so

perful that we are having major effects on the planet, its environment, and the biosphere. For some years prophets have warned of the possible detrimental consequences of our activities, such as pollution, deforestation, and overfishing, and recently it has become clear that we are even changing the atmosphere (e. g. ozone, carbon dioxide). This is worrying since the planet's life systems are involved and dependent on its functioning. Current climate change – global warming – is one recognised consequence of this larger problem. To face this major challenge, we will need the research and advice of many disciplines – Physics, Chemistry, Earth Sciences, Biology, and Sociology – and particularly the commitment of wise politicians such as US Senator Al Gore. An important aspect of this global problem that has been researched for several decades is the loss of species and the impoverishment of our ecosystems, and hence their ability to sustain themselves, and more particularly us! Through evolutionary time new species have been generated and some have gone extinct. Such extinction and regeneration are moulded by changes in the earth's crust, atmosphere, and resultant climate. Some extinctions have been massive, particularly those associated with catastrophic meteoric impacts like the end of the Cretaceous Period 65Mya.

*On Fuzziness* Rudolf Seising, Enric Trillas, Claudio Moraga, Settimo Termini, 2013-01-12 The notion of Fuzziness stands as one of the really new concepts that have recently enriched the world of Science. Science grows not only through technical and formal advances on one side and useful applications on the other side, but also as consequence of the introduction and assimilation of new concepts in its corpus. These, in turn, produce new developments and applications. And this is what Fuzziness, one of the few new concepts arisen in the XX Century, has been doing so far. This book aims at paying homage to Professor Lotfi A. Zadeh, the “father of fuzzy logic” and also at giving credit to his exceptional work and personality. In a way, this is reflected in the variety of contributions collected in the book. In some of them the authors chose to speak of personal meetings with Lotfi; in others, they discussed how certain papers of Zadeh were able to open for them a new research horizon. Some contributions documented results obtained from the author/s after taking inspiration from a particular idea of Zadeh, thus implicitly acknowledging him. Finally, there are contributions of several “third generation fuzzysists or softies” who were firstly led into the world of Fuzziness by a disciple of Lotfi Zadeh, who, following his example, took care of opening for them a new road in science. Rudolf Seising is Adjoint Researcher at the European Centre for Soft Computing in Mieres, Asturias (Spain). Enric Trillas and Claudio Moraga are Emeritus Researchers at the European Centre for Soft Computing, Mieres, Asturias (Spain). Settimo Termini is Professor of Theoretical Computer Science at the University of Palermo, Italy and Affiliated Researcher at the European Centre for Soft Computing, Mieres, Asturias (Spain)

*Historical Ecology of the British Flora* M. Ingrouille, 2012-12-06 The native British flora is today relatively ant species on the continent, such as *Picea* impoverished. Today the British Isles has a *abies* (Norway spruce), did not get into Britain flora of only about 1500 species of native in time. However, we must not over flowering plants. France and Spain, each emphasize the importance of Britain being an geographically only about twice the area, island. A comparison of floras on either side have 3-4 times as many species each. The of the English

Channel shows that there are comparison is more marked when consider species present in England and not in the endemic species, those specialities of northern France as well as vice versa. Many each geographical region which grow of the species present in northern France but nowhere else. If only normal sexual species absent from England are weeds adapted to are considered, then there are only about 13 French agriculture. Others may be limited endemic species in the British Isles while 1000 not by the sea but by the climate. species are endemic to Spain. Nevertheless, the example of Ireland, However, the poverty of the British flora is which was isolated much earlier than the rest not a unique phenomenon. The whole of of the British Isles, does show the effect of north-western Europe, an area including isolation because it does have a much poorer northern France and much of Germany and flora and fauna.

**Second Assessment of Climate Change for the Baltic Sea Basin** The BACC II Author Team, 2015-04-03 □ This book is an update of the first BACC assessment, published in 2008. It offers new and updated scientific findings in regional climate research for the Baltic Sea basin. These include climate changes since the last glaciation (approx. 12,000 years ago), changes in the recent past (the last 200 years), climate projections up until 2100 using state-of-the-art regional climate models and an assessment of climate-change impacts on terrestrial, freshwater and marine ecosystems. There are dedicated new chapters on sea-level rise, coastal erosion and impacts on urban areas. A new set of chapters deals with possible causes of regional climate change along with the global effects of increased greenhouse gas concentrations, namely atmospheric aerosols and land-cover change. The evidence collected and presented in this book shows that the regional climate has already started to change and this is expected to continue. Projections of potential future climates show that the region will probably become considerably warmer and wetter in some parts, but dryer in others. Terrestrial and aquatic ecosystems have already shown adjustments to increased temperatures and are expected to undergo further changes in the near future. The BACC II Author Team consists of 141 scientists from 12 countries, covering various disciplines related to climate research and related impacts. BACC II is a project of the Baltic Earth research network and contributes to the World Climate Research Programme.

**Diabetes Its Medical and Cultural History** Dietrich v. Engelhardt, 2012-12-06 Diabetes. Its Medical and Cultural History covers the history of scientific inquiry into this affliction from antiquity to the discovery of insulin (1921) with concurrent consideration of the history of the patient and the cultural historical background. The reprints of medical historical studies discuss general relationships as well as specific details and exceptional research achievements of the past. Included in the bibliography of primary sources are the most important historical contributions in diabetic research and diabetic therapy with the author's name and information on the place of publication. The bibliography of secondary literature consolidates international studies from the past century to the present on the history of the theory of diabetes and therapeutic approaches. Illustrations and literary texts document cultural historical relationships. In index of persons and items facilitates use of this work which is intended to provide a stimulus for the physician, medical historian, medical student, general

historian as well as diabetics themselves.

High Mountain Conservation in a Changing World Jordi Catalan, Josep M Ninot, M. Mercè Aniz, 2017-08-03 This book provides case studies and general views of the main processes involved in the ecosystem shifts occurring in the high mountains and analyses the implications for nature conservation. Case studies from the Pyrenees are preponderant, with a comprehensive set of mountain ranges surrounded by highly populated lowland areas also being considered. The introductory and closing chapters will summarise the main challenges that nature conservation may face in mountain areas under the environmental shifting conditions. Further chapters put forward approaches from environmental geography, functional ecology, biogeography, and paleoenvironmental reconstructions. Organisms from microbes to large carnivores, and ecosystems from lakes to forest will be considered. This interdisciplinary book will appeal to researchers in mountain ecosystems, students and nature professionals. This book is open access under a CC BY license.

**Carabid Beetles: Ecology and Evolution** K. Desender, M. Dufrêne, M. Loreau, M.L. Luff, J-P. Maelfait, 2013-04-17 The Carabidae form one of the largest and best studied families of insects, occurring in nearly every terrestrial habitat. The contributions included in this book cover a broad spectrum of recent research into this beetle family, with an emphasis on various aspects of ecology and evolution. They deal both with individual carabid species, for example in studies on population and reproductive biology or life history in general, and with ground beetle communities, as exemplified in papers treating assemblages in natural habitats, on agricultural land and in forests. Disciplines range from biogeography and faunistics, over morphology, taxonomy and phylogenetics, ecophysiology and functional ecology, to population, community, conservation and landscape ecology. This volume is the result of the 8th European Carabidologists' Meeting, 2nd International Symposium of Carabidology, September 1-4, 1992, Belgium.

**Ecology of Red Deer** Brian Mitchell, Brian W. Staines, David Welch, 1977

Microbial Growth on C1 Compounds H.W. Verseveld, J.A. Duine, 2012-12-06 The 5th International Symposium on Microbial Growth on C Compounds was held at the Biological 1 Center of the University of Groningen, Haren, The Netherlands, 11-16 August 1986. The meeting attracted well over 200 participants from 15 countries. This volume contains the formal presentations made at that time, which, because of the breadth of topics covered, were divided into seven sections of related papers. This meeting, under the chairmanship of Wim Harder, was both scientifically and socially very successful. This success cannot only be credited to the main presentations, but also to the well cared for 121 poster presentations, whereof the abstracts have been published separately. The series of Symposia will be continued in 1989, in the Federal Republic of Germany. We wish to acknowledge the invaluable help of Joke Daniels, Roberta Stroer-Schneider, Karin Uyldert, Hansje Bartelson and Josine van Verseveld-Stroer, who retyped the manuscripts resulting in a uniform presentation of these proceedings.

*Robotics, Machinery and Engineering Technology for Precision Agriculture* Mark Shamtsyan, Marco Pasetti, Alexey Beskopylny, 2021-10-04 This book is a collection of papers presented at XIV International Scientific Conference

"INTERAGROMASH 2021", held at Don State Technical University, Rostov-on-Don, Russia, during 24–26 February 2021. The research results presented in this book cover applications of unmanned aerial systems, satellite-based applications for precision agriculture, proximal and remote sensing of soil and crop, spatial analysis, variable-rate technology, embedded sensing systems, drainage optimization and variable rate irrigation, wireless sensor networks, Internet of things, robotics, guidance and automation, software and mobile apps for precision agriculture, decision support for precision agriculture and data mining for precision agriculture.

The Origin of Mountains Cliff Ollier, Colin Pain, 2004-08-02 The Origins of Mountains approaches mountains from facts about mountain landscapes rather than theory. The book illustrates that almost everywhere, mountains arose by vertical uplift of a former plain, and by a mixture of cracking and warping by earth movements, and erosion by rivers and glaciers, the present mountainous landscapes were created. It also gives evidence that this uplift only occurred in the last few million years, a time scale which does not fit the plate tectonics theory. Another fascinating part of the evidence, shows that mountain uplift correlates very well with climatic change. Mountain building could have been responsible for the onset of the ice age. It certainly resulted in the creation of new environments. Fossil plants and animals are used in places to work out the time of mountain uplift, which in turn helps to explain biogeographical distributions.

*The Genesis of the Bodhisattva Ideal* Anālayo, 2010 In this book, Bhikkhu Anālayo investigates the genesis of the bodhisattva ideal, one of the most important concepts in the history of Buddhist thought. He brings together material from the corpus of the early discourses preserved mainly in Pāli and Chinese that appear to have influenced the arising of the bodhisattva ideal. Anālayo convincingly shows that the early sources do not present compassionate concern for others as a motivating force for the Buddha's quest for awakening. He further offers an analysis of the only reference to Maitreya in the Pāli canon, showing that this reference is most likely a later addition. In sum, Bhikkhu Anālayo is able to delineate a gradual genesis of central aspects of the bodhisattva ideal by documenting (1) an evolution in the bodhisattva concept reflected in the early discourses, (2) the emergence of the notion of a vow to pursue the path to buddhahood, and (3) the possible background for the idea of a prediction an aspirant to buddhahood receives from a former buddha.

*Reason's Traces* Matthew Kapstein, 2001-06-15 Reason's Traces addresses some of the key questions in the study of

Indian and Buddhist thought: the analysis of personal identity and of ultimate reality, the interpretation of Tantric texts and traditions, and Tibetan approaches to the interpretation of Indian sources. Drawing on a wide range of scholarship, Reason's Traces reflects current work in philosophical analysis and hermeneutics, inviting readers to explore in a Buddhist context the relationship between philosophy and traditions of spiritual exercise.

**Their Brothers' Keepers** Philip Friedman, 2018-12-01 This book documents the tales of scores of Christian heroes and heroines from all walks of life, in various European countries, who aided the oppressed escape the Nazi terror. Christians in Czechoslovakia, Yugoslavia, Bulgaria, Greece, France, Italy, Hungary and Eastern Europe defied Gestapo truncheons to be their brothers' keepers. Fully documented addition to material which has not been treated before in this way. "...One of the most thrilling stories of our generation, excitingly written and well-documented...it serves as an inspiration for all those who have the courage to express their love to their fellowman..."—The Very Rev. JAMES A. PIKE, Dean of the Cathedral of St. John the Divine in New York "...a major document of human solidarity, this story testifies to the survival of the spirit of heroism, as well as of martyrdom, in behalf of humanitarian ideals."—Professor SALO W. BARON, Columbia University "...I commend this work to all who are interested in seeing how people reached up gentle hands and took Christ's law of love out of the sky and...put it into practice...I hope it is read by millions."—Rev. JOHN A. O'BRIEN, University of Notre Dame

*Fluorine Chemistry at the Millennium* R.E. Banks, 2000-12-04 This volume brings together contributions by leading researchers covering a wide scope so characteristic of fluorine chemistry. It is a monograph of historical character comprising personalized accounts of progress and events in areas of particular interest. There is also much to interest and instruct chemists from other disciplines as a good proportion of the chapters contain a considerable amount of 'hard' referenced information relating to modern organic, organoelemental and inorganic chemistry. Historians of chemistry and technology will no doubt be tempted to dip into this book, and surely whoever addresses the task of commemorating Moissan's achievement at the 150-years stage will bless us all in some measure for its existence.
