**Alternative Fuels** Krzysztof Biernat, 2016-03-24 The presented book provides an overview of the most widely used alternative fuels in the power supply systems in spark-ignition engines and compression-ignition engines, such as LPG, CNG and RME, including the assessment of their operational usefulness, especially in terms of environmental impact in urban traffic. The possibilities of optimizing the ignition processes in engines fueled by gas are presented. The monograph also contains the results of exploitation tests with an assessment of the environmental impact of fuels containing oxygen additives in diesel engines. The possibilities of producing a wide range of advanced alternative fuels (biofuels) with the use of microorganisms as raw materials are also presented.

**Smart and Green Solutions for Transport Systems** Grzegorz Sierpiński, 2019-11-13 This proceedings book gathers selected papers presented at the 16th Scientific and Technical Conference "Transport Systems. Theory and Practice", organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16-18 September 2019 in Katowice (Poland). More details at [www.TSTP.polsl.pl](http://www.TSTP.polsl.pl) Which of the multi-criteria methods should be applied to support decision-making processes while tackling problems of sustainable transport solutions? How can individual issues encountered when implementing smart solutions in transport systems be solved? What advanced tools can be used to assess the current condition of selected elements of transport systems (both in terms of transport infrastructure and traffic streams)? What data concerning transport processes can be collected automatically and how can we use it? What is the right approach to the problem of the development of the spatial planning of transport systems? This book provides the answers to these and many other questions. It also includes a wealth of numerical analyses based on significant data sets, illustrating the close affiliation between smart transport systems and environment-friendly solutions. The book primarily addresses the needs of three target groups: • Scientists and researchers (ITS field) • Those working for local authorities (responsible for the transport systems at the urban and regional levels) • Representatives of business (traffic strategy management) and industry (manufacturers of ITS components).

**Dynamic Charging of Electric Buses** Mikolaj Bartlomiejczyk, 2018-11-09 Despite the continuous development of electrochemical battery technology and the multitude of electric buses on offer, it is still not possible to exploit electric buses in urban transport on an all-day basis without the necessity of charging them. It is therefore necessary to build point-to-point contact charging stations or induction charging stations at the terminals. This will result in substantial financial outlays connected with the construction of the charging stations, and the need to extend stopping times at the terminals; there are also problems which could arise regarding the situations where the bus routes are. The alternative solution is a Dynamic Charging System of electric vehicles, also known as In Motion Charging (IMC). This book is devoted to the dynamic charging of electric buses using a trolleybus traction network. It was based on the author's scientific and research work carried out into the Gdynia trolleybus network. The requirements and limiting parameters for the infrastructure of the transport system based on dynamic loading are presented. **Transportation for Livable Cities** Vukan Vuchic, 2017-09-08 The twenty-first century finds civilization heavily based in cities that have grown into large metropolitan areas. Many of these focal points of human activity face problems of economic inefficiency, environmental deterioration, and an unsatisfactory quality of life—problems that go far in determining whether a city is livable. A large share of these problems stems from the inefficiencies and other impacts of urban transportation systems. The era of projects aimed at maximizing vehicular travel is being replaced by the broader goal of achieving livable cities: economically efficient, socially sound, and environmentally friendly. This book explores the complex relationship between transportation and the character of cities and metropolitan regions. Vukan Vuchic applies his experience in urban transportation systems and policies to present a systematic review of transportation modes and their characteristics. Transportation for Livable Cities dispels the myths and emotional advocacies for or against freeways, rail transit, bicycles, and other modes of transportation. The author discusses the consequences of excessive automobile dependence and shows that the most livable cities worldwide have intermodal systems that balance highway and public transit modes while providing for pedestrians, bicyclists, and paratransit. Vuchic defines the policies necessary for achieving livable cities: the effective implementation of integrated intermodal transportation systems.

**The Economics of Urban Transportation** Kenneth A. Small, Erik T. Verhoef, 2007-10-18 This timely new edition of Kenneth A. Small's seminal textbook Urban Transportation Economics, co-authored with Erik T. Verhoef, has been fully updated, covering new areas such as parking policies, reliability of travel times, and the privatization of transportation services, as well as updated treatments of congestion modelling, environmental costs, and transit subsidies. Rigorous in approach and making use of real-world data and econometric techniques, it contains case studies from a range of countries including congestion charging in Norway, Singapore and the UK, light rail in the Netherlands and freeway tolls in the US. Small and Verhoef cover all basic topics needed for any application of economics to transportation: forecasting the demand for transportation services under alternative policies measuring all the costs including those incurred by users setting prices under practical constraints choosing and evaluating investments in basic facilities designing ways in which the private and public sectors interact to provide services. This book will be of great interest to students with basic calculus and some knowledge of economic theory who are engaged with transportation economics, planning and, or engineering, travel demand analysis, and many related fields. It will also be essential reading for researchers in any aspect of urban transportation.

**Room at the Inn** Kristy Dykes, Pamela Griffin, 2004 These two holiday romances are perfectly paired at one irresistible price! Authors Kristy Dykes and Pamela M. Griffin celebrate hospitality by hanging out the welcome sign at a bed-and-breakfast inn in Florida and a bed-and-breakfast ranch in Texas. Characters seeking rest and seclusion for the holidays are about to get a surprise--Lois steps under the orange tree and into a love triangle, and Derrick is roped by a match-making scheme. Will faith, hope, and love be invited to take up permanent residence in their hearts after the holidays--or be asked to check out when the Christmas tree comes down?

**Land and the City** Philip Kivell, 2002-11-01 First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

**Skyscraper Gothic** Kevin D. Murphy, Lisa Reilly, 2017-06-08 Of all building types, the skyscraper strikes observers as the most modern, in terms not only of height but also of boldness, scale, ingenuity, and daring. As a phenomenon born in late nineteenth-century America, it quickly became emblematic of New York, Chicago, and other major cities. Previous studies of these structures have tended to foreground examples of more evincing modernist approaches, while those with styles reminiscent of the

great Gothic cathedrals of Europe were initially disparaged as being antimodernist or were simply unacknowledged. Skyscraper Gothic brings together a group of renowned scholars to address the medievalist skyscraper—from flying buttresses to dizzying spires; from the Chicago Tribune Tower to the Woolworth Building in Manhattan. Drawing on archival evidence and period texts to uncover the ways in which patrons and architects came to understand the Gothic as a historic style, the authors explore what the appearance of Gothic forms on radically new buildings meant urbanistically, architecturally, and socially, not only for those who were involved in the actual conceptualization and execution of the projects but also for the critics and the general public who saw the buildings take shape. Contributors: Lisa Reilly on the Gothic skyscraper ● Kevin Murphy on the Trinity and U.S. Realty Buildings ● Gail Fenske on the Woolworth Building ● Joanna Merwood-Salisbury on the Chicago School ● Katherine M. Solomonson on the Tribune Tower ● Carrie Albee on Atlanta City Hall ● Anke Koeth on the Cathedral of Learning ● Christine G. O'Malley on the American Radiator Building

*Transportation Systems Analysis* Ennio Cascetta,2009-08-22 This book provides a rigorous and comprehensive coverage of transportation models and planning methods and is a must-have to anyone in the transportation community, including students, teachers, and practitioners. Moshe Ben-Akiva, Massachusetts Institute of Technology.

*Case Study Research* Peter Swanborn,2010-06-22 How should case studies be selected? Is case study methodology fundamentally different to that of other methods? What, in fact, is a case? Case Study Research: What, Why and How? is an authoritative and nuanced exploration of the many faces of case-based research methods. As well as the what, how and why, the author also examines the when and which – always with an eye on practical applications to the design, collection, analysis and presentation of the research. Case study methodology can prove a confusing and fragmented topic. In bringing diverse notions of case study research together in one volume and sensitising the reader to the many varying definitions and perceptions of 'case study', this book equips researchers at all levels with the knowledge to make an informed choice of research strategy.
