**Swami and Friends** R. K. Narayan, 2012-07-25 R. K. Narayan (1906–2001) witnessed nearly a century of change in his native India and captured it in fiction of uncommon warmth and vibrancy. *Swami and Friends* introduces us to Narayan's beloved fictional town of Malgudi, where ten-year-old Swaminathan's excitement about his country's initial stirrings for independence competes with his ardor for cricket and all other things British. Written during British rule, this novel brings colonial India into intimate focus through the narrative gifts of this master of literary realism.

**WIG Craft and Ekranoplan** Liang Yun, Alan Bliault, Johnny Doo, 2009-12-03 In the last half-century, high-speed water transportation has developed rapidly. Novel high-performance marine vehicles, such as the air cushion vehicle (ACV), surface effect ship (SES), high-speed monohull craft (MHC), catamaran (CAT), hydrofoil craft (HYC), wave-piercing craft (WPC) and small water area twin hull craft (SWATH) have all developed as concepts, achieving varying degrees of commercial and military success. Prototype ACV and SES have achieved speeds of 100 knots in at calm con- tions; however, the normal cruising speed for commercial operations has remained around 35-50 knots. This is partly due to increased drag in an average coastal s- way where such craft operate services and partly due to limitations of the propulsion systems for such craft. Water jets and water propellers face limitations due to c- itation at high speed, for example. SWATH are designed for reduced motions in a seaway, but the hull form is not a low drag form suitable for high-speed operation. So that seems to lead to a problem - maintain water contact and either water propulsion systems run out of power or craft motions and speed loss are a problem in higher seastates. The only way to higher speed would appear to be to disconnect completely from the water surface. You, the reader, might respond with a question about racing hydroplanes, which manage speeds of above 200 kph. Yes, true, but the power-to-weight ratio is extremely high on such racing machines and not economic if translated into a useful commercial vessel.

**Counterrevolution and Revolt** Herbert Marcuse, 2010-07-01

In this book Herbert Marcuse makes clear that capitalism is now reorganizing itself to meet the threat of a revolution that, if realized, would be the most radical of revolutions: the first truly world-historical revolution. Capitalism's counterrevolution, however, is largely preventive, and in the Western world altogether preventive. Yet capitalism is producing its own grave-diggers, and Marcuse suggests that their faces may be very different from those of the wretched of the earth. The future revolution will be characterized by its enlarged scope, for not only the economic and political structure, not only class relations, but also humanity's relation to nature (both human and external nature) tend toward radical transformation. For the author, the liberation of nature is the connecting thread between the economic-political and the cultural revolution, between changing the world and personal emancipation.

New Frontiers of Molecular Epidemiology of Infectious Diseases Serge Morand, François Beaudeau, Jacques Cabaret, 2011-09-08 Molecular epidemiology has recently broadened its focuses due to the development of molecular tools but also by incorporating advances of other fields such as mathematical epidemiology, molecular ecology, population genetics and evolution. Facing new risks of emerging and re-emerging infectious diseases that are threats for humans and their livestock, the objectives of molecular epidemiology include: - the development of molecular tools, genotyping and gene expression - the incorporation of concepts and results of population genetics of infectious diseases - the integration of recent advances in theoretical epidemiology and evolutionary ecology of diseases - a better understanding of transmission for the development of risk factors analyses. This book will demonstrate how the latest developments in molecular tools and in epidemiology can be integrated with studies of host-pathogen interactions. Besides a strong theoretical component, there will also be an emphasis on applications in the fields of epidemiology, public health,

veterinary medicine, and health ecology. Students and researchers in the fields of epidemiology, animal and human health, evolutionary ecology, parasitology are the main potential readers of the book, as well as a broader audience from veterinary medicine and conservation.

Globalization, Growth, and Poverty Paul Collier, David

Dollar, 2002 Globalization - the growing integration of economies and societies around the world, is a complex process. The focus of this research is the impact of economic integration on developing countries and especially the poor people living in these countries. Whether economic integration supports poverty reduction and how it can do so more effectively are key questions asked. The research yields 3 main findings with bearings on current policy debates about globalization. Firstly, poor countries with some 3 billion people have broken into the global market for manufactures and services, and this successful integration has generally supported poverty reduction. Secondly, inclusion both across countries and within them is important as a number of countries (pop. 2 billion) are failing as states, trading less and less, and becoming marginal to the world economy. Thirdly, standardization or homogenization is a concern - will economic integration lead to cultural or institutional homogenization?

Aircraft Design Mohammad H. Sadraey, 2012-11-20 A

comprehensive approach to the air vehicle design process using the principles of systems engineering Due to the high cost and the risks associated with development, complex aircraft systems have become a prime candidate for the adoption of systems engineering methodologies. This book presents the entire process

of aircraft design based on a systems engineering approach from conceptual design phase, through topreliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraft design, this book covers the components and the issues affected by design procedures. The basic topics that are essential to the process, such as aerodynamics, flight stability and control, aero-structure, and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic manner to emphasise the integration of the individual components into the overall design. Throughout the book the various design options are considered and weighed against each other, to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero-structure, and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real-world projects. Key features:

- Provides full coverage of the design aspects of an air vehicle including: aeronautical concepts, design techniques and design flowcharts
- Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level
- Includes fundamental explanations for aeronautical engineering students and practicing engineers
- Features a solutions manual to sample questions on the book's companion website

*Phonetics* Martin J Ball, Joan Rahilly, 2014-02-04 In their comprehensive new introduction to phonetics, Ball and Rahilly offer a detailed explanation of the process of speech production, from the anatomical initiation of sounds and their modification in

the larynx, through to the final articulation of vowels and consonants in the oral and nasal tracts. This textbook is one of the few to give a balanced account of segmental and suprasegmental aspects of speech, showing clearly that the communication chain is incomplete without accurate production of both individual speech sounds (segmental features) and aspects such as stress and intonation (suprasegmental features). Throughout the book the authors provide advice on transcription, primarily using the International Phonetic Alphabet (IPA). Students are expertly guided from basic attempts to record speech sounds on paper, to more refined accounts of phonetic detail in speech. The authors go on to explain acoustic phonetics in a manner accessible both to new students in phonetics, and to those who wish to advance their knowledge of key pursuits in the area, including the sound spectrograph. They describe how speech waves can be measured, as well as considering how they are heard and decoded by listeners, discussing both physiological and neurological aspects of hearing and examining the methods of psychoacoustic experimentation. A range of instrumentation for studying speech production is also presented. The next link is acoustic phonetics, the study of speech transmission. Here the authors introduce the basic concepts of sound acoustics and the instrumentation used to analyse the characteristics of speech waves. Finally, the chain is completed by examining auditory phonetics, and providing a fascinating psychoacoustic experimentation, used to determine what parts of the speech signal are most crucial for listener understanding. The book concludes with a comprehensive survey and description of modern phonetic instrumentation, from the sound spectrograph to magnetic resonance imaging (MRI).

**Advances in Human Factors, Business Management and Leadership** Jussi Ilari Kantola, Salman Nazir, Vesa Salminen, 2020-06-30 This book analyzes new theories and practical approaches for promoting excellence in human resource management and leadership. It shows how the principles of

creating shared value can be applied to ensure faster learning, training, business development and social renewal. In particular, it presents novel methods and tools for tackling the complexity of management and learning in both business organizations and society. Discussing ontologies, intelligent management systems, and methods for creating knowledge and value added, it offers novel insights into time management and operations optimization, as well as advanced methods for evaluating customers' satisfaction and conscious experience. Based on two AHFE 2020 Virtual Conferences: the AHFE 2020 Conference on Human Factors, Business Management and Society and the AHFE 2020 Conference on Human Factors in Management and Leadership, held on July 16-20, 2020, the book provides researchers and professionals with extensive information, practical tools and inspiring ideas for achieving excellence in a broad spectrum of business and societal activities.

**Aerodynamics of a Lifting System in Extreme Ground Effect** Kirill V. Rozhdestvensky, 2013-03-09 This book is dedicated to the memory of a distinguished Russian engineer, Rostislav E. Alexeyev, who was the first in the world to develop the largest ground effect machine - Ekranoplan. One of Alexeyev's design concepts with the aerodynamic configuration of a jlying wing can be seen on the front page. The book presents a description of a mathematical model of flow past a lifting system, performing steady and unsteady motions in close proximity to the underlying

solid surface (ground). This case is interesting for practical purposes because both the aerodynamic and the economic efficiency of the system near the ground are most pronounced. Use of the method of matched asymptotic expansions enables closed form solutions for the aerodynamic characteristics of the wings-in-ground effect. These can be used for design, identification, and processing of experimental data in the course of developing ground effect vehicles. The term extreme ground effect, widely used through out the book, is associated with very small relative ground clearances of the order of 10% or less. The theory of a lifting surface, moving in immediate proximity to the ground, represents one of the few limiting cases that can be treated analytically. The author would like to acknowledge that this work has been influenced by the ideas of Professor Sheila E. Widnall, who was the first to apply the matched asymptotics techniques to treat lifting flows with the ground effect. Saint Petersburg, Russia February 2000 Kirill V. Rozhdestvensky

### **The Holocaust and European Societies** Frank

Bajohr, Andrea Löw, 2016-11-30 This book explores the Holocaust as a social process. Although the mass murder of European Jews was essentially the result of political-ideological decisions made by the Nazi state leadership, the events of the Holocaust were also part of a social dynamic. All European societies experienced developments that led to the social exclusion, persecution and murder of the continent's Jews. This volume therefore questions Raul Hilberg's category of the 'bystander'. In societies where the political order expects citizens to endorse the exclusion of particular groups in the population, there cannot be any completely uninvolved bystanders. Instead, this book examines the multifarious forms of social action and behaviour connected with the Holocaust. It focuses on institutions and persons, helpers, co-perpetrators, facilitators and spectators, beneficiaries

and profiteers, as well as Jewish victims and Jewish organisations trying to cope with the dynamics of exclusion and persecution.

*On the Border of Language and Dialect* Marjatta

Palander, Helka Riionheimo, 2018-04-23 This volume considers the linguistic borders between languages and dialects, as well as the administrative, cultural and mental borders that reflect or affect linguistic ones; it comprises eight articles examining the mental borders between dialects, dialect continua and areas of mixed dialect, language ideologies, language mixing and contact-induced language change. The book opens with Dennis R. Preston's review article on perceptual dialectology, showing how this field of study provides insights on laymen's perceptions about dialect boundaries, and how such perceptions explain regional and social variation. Johanna Laakso problematizes the common notion of languages as having clear-cut boundaries and stresses the artificialness and conventionality of linguistic borders. Vesa Koivisto introduces the Border Karelian dialects as an example of language and dialect mixing. Marjatta Palander and Helka Riionheimo's article examines the mental boundaries between Finnish and Karelian, demonstrated by the informants when recalling their fading memories of a lost mother tongue. Niina Kunnas focuses on how speakers of White Sea Karelian perceive the boundaries between their language and other varieties. Within the framework of language ideology, Tamás Péter Szabó highlights the ways in which linguistic borders are interactionally (co)constructed in the school environment in Hungary and Finland. Anna-Riitta Lindgren and Leena Niiranen present a contact-linguistic study investigating the vocabulary of Kven, a variety lying on the fuzzy boundary of a language and a dialect. Finally, Vesa Jarva and Jenni Mikkonen approach demographically manifested linguistic boundaries by examining the Old Helsinki slang, a mixture of lexical features derived from Finnish and Swedish. Together, the articles paint a picture of a multidimensional, multilingual, variable and ever-changing

linguistic reality where diverse borders, boundaries and barriers meet, intertwine and cross each other. As a whole, the articles also seek to cross disciplinary and methodological boundaries and present new perspectives on earlier studies.
