**Sheldon M. Stern**

Ilyushin IL-28 Beagle Yefim Gordon, Dmitrii Komissarov, 2002 Entering service with the USSR Air Force in 1950, the Ilyushin IL-28 Beagle has been dubbed 'The Russian Canberra.' This is the first in-depth study of the long-serving light bomber. Besides the USSR, it served with the air forces of Egypt, China, Czechoslovakia and Poland. The aircraft had a maximum speed of 600 mph at sea level and 515 mph at 36,000 feet. IL-28 was armed with two, fixed forward-firing 23-mm cannons and two, 23-mm cannons in a manually-directed tail position. Hardcover, 7-1/2 x 9-1/2, 224 pp, 24 color, 162 b/w and 36 line drawings

*Ilyushin IL-28* Yefim Gordon, Dmitriy Komissarov, 2015 Encompasses the full development and operational history of the Ilyushin IL-28.

*Aeroplane* Adam Bialek, 2021-04-08 Photographic documentation of the aircraft, with visible details of the external construction elements. The album contains only photos. There is no text or description in the album. IL-28. Reconnaissance plane, 1950, USSR. Span 22.65 m (with additional fuel tanks) Length 17.65 m Take-off weight (nominal) 19,500 kg Maximum speed 876 km/h Ceiling 12,300 m Range 3150 km Armament Powerplant: 2 x VK-1, rated at 2700 kG (2646 kW) The aeroplane was designed as a high wing, twin engine bomber, with a nose wheel. The crew was limited to three men: pilot, navigator/bombardier and rear gunner/radio operator. There were two pressurised compartments, increasing the crew's comfortable working environment in high altitudes. Under the straight leading edges, two engine nacelles with main undercarriage wheel bays were assembled. Swept vertical and horizontal stabilisers allowed for keeping appropriate steering and stability at high speeds. Armament consisted of a 3000kg maximum bomb load, carried in the fuselage inner bomb bay and four 23mm cannons - two fixed in front, on the both sides of fuselage

and twin movable cannons at the rear. The first Il-28 bombers reached Soviet air regiments at the beginning of 1950 and gained recognition among the flying personnel for its outstanding flying characteristics. The ground crews valued the aircraft for its access to engines and other equipment. Along with the Il-28, a reconnaissance version was developed. It was flown in April 1950, and was intended for night or day use, tactical and operational reconnaissance. The aircraft's bomb bay was adopted to carry different cameras, photo flash bombs, flares and fuel tanks. Additional fuel tanks were attached at the wing tips. The Il-28R was armed with three 23mm cannons. In the following years the Il-28 was utilised for radio reconnaissance and electronic warfare (passive and active jamming of enemy electronics). The Il-28 aircraft were in service in many countries. They were also engaged in some military conflicts.

**Ilyushin Il-4 in Action** Hans-Heiri Stapfer, Don Greer, 2004-01-01 Ilyushin Il-4 in Action (SC). Provides an enlightening look at the WW II Soviet bomber. Includes full color profiles, B&W line art, technical data, 80 B&W photos.

*Ilyushin Il-2* Yefim Gordon, Sergey Komissarov, 2010 This is the definitive history of the Ilyushin Il-2 Sturmovik and provides detailed coverage on every aspect of this famous warplane. This is perhaps the most famous aircraft in the history of Russian and Soviet aviation. During World War 2 this rugged ground attack aircraft was arguably the Soviets' most effective weapon. Protected by its heavy armor, the low-flying aircraft was incredibly difficult to shoot down, and its powerful array of weaponry included a cannon, machine guns, rockets, and special HEAT antitank bombs. It was capable of penetrating the armor of every German tank in the field at the time, including the Panther

and Tiger tanks, as well as reaping destruction among the ranks of enemy infantry on the ground. The Il-2 was so successful that the design was produced in greater numbers than any other military aircraft in history, with over 40,000 being built between 1941 and 1955.

*First Soviet Jet Bombers* Yefim Gordon, 2004 As World War II drew to a close, the Soviet government was well aware that today's allies would soon be tomorrow's adversaries. This meant new bombers had to be developed for dealing strikes at the potential adversaries' military and political centers. Having gained access to German jet aircraft technology and the men behind it in 1945, the Soviet Union put them to good use when developing its own jet bombers. The first jet bomber to fly in the USSR was the Junkers EF131. Built in 1946, it was based on the unconventional forward-swept wing Ju 287 V2, which had been captured in incomplete form. This was followed by the EF140 (a similar FSW design differing in powerplant) and the equally unusual T-tailed, bicycle-gear 'aircraft 150' developed by Brunolf Baade which was ultimately rejected in favor of the Tupolev Tu-16. The first wholly indigenous Soviet jet bomber came from the Ilyushin design bureau; it was the four-engined IL-22 of 1947. Other experimental Ilyushin bombers - the IL-30, IL-46 and IL-54 which lost out to competing designs - are described in this book, as are the Tupolev 'aircraft 77', 'aircraft 82' and the 'aircraft 72/73/78' series which culminated in the Tu-14 twinjet bomber built on a small scale, mainly for the Soviet Navy.

**Visual Aircraft Recognition** U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US

Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

**Russia and the Arms Trade** Ian Anthony, Stockholm International Peace Research Institute, 1998 For this study, a group of Russian authors were commissioned to describe and assess the arms trade policies and practices of Russia under new domestic and international conditions. The contributors, drawn from the government, industry, and academic communities, offer a wide range of reports on the political, military, economic, and industrial implications of Russian arms transfers, as well as specific case studies of key bilateral arms transfer relationships.

**China's Arms Acquisitions from Abroad** Bates Gill, Taeho Kim, 1995 This book assesses current Chinese arms imports in the light of China's historical efforts to modernize its weapon-production capacity through foreign acquisitions. It considers the implications of these imports for future security developments in the East Asian region.

*Convair B-36 Peacemaker* Meyers K. Jacobsen, 1999 *Convair B-36 Peacemaker, A Photo Chronicle* explores the history of the Strategic Air Command's biggest bomber that helped keep the peace during the early years of the Cold War. The six-engined B-36 - later ten engine - was the first intercontinental bomber that could fly across continents, hit its target, and return to base unrefueled - long a dream of air planners. Presented here through the use of historical photographs is the history of this magnificent airplane, from its origin just prior to America's entry into World War II in 1941, to its final days in 1959 when its last missions were flown. This book will give the reader a

concise overview of the story of the Peacemaker in the 1940s-1950s. A serial number listing is included, as well as a list of all ten B-36 bomb wings.

*Averting 'The Final Failure'* Sheldon M. Stern, 2003 A comprehensive account of the ExComm meetings provides running commentary on the issues and options that were discussed, explaining in accessible terms their specific themes and the roles of individual participants while offering insight into how JFK steered policy makers away from a nuclear conflict. MiG-21 Units of the Vietnam War István Tópercz, 2012-11-20 Having honed their piloting skills on the subsonic MiG-17 and transonic MiG-19, the Vietnamese Peoples' Air Force (VPAF) received their first examples of the legendary MiG-21 supersonic fighter in 1966. Soon thrown into combat over North Vietnam, the guided-missile equipped MiG-21 proved a deadly opponent for the USAF, Navy and Marine Corps crews striking at targets deep into communist territory. Most of the VPAF's 12+ aces scored their bulk of their kills in the MiG-21, which was then the best fighter produced by Russia's premier fast jet manufacturer, Mikoyan Gurevich. Well over 200 MiG-21s were supplied to the VPAF, and the numerous models and the schemes they wore are chronicled in great detail in this unique volume.

In-Flight Simulators and Fly-by-Wire/Light Demonstrators Peter G. Hamel, 2017-03-15 This book offers the first complete account of more than sixty years of international research on In-Flight Simulation and related development of electronic and electro-optic flight control system technologies ("Fly-by-Wire" and "Fly-by-Light"). They have provided a versatile and experimental procedure that is of particular importance for verification, optimization, and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems. Extensive coverage is given in the book to both fundamental information related to flight testing and state-of-the-art advances in

the design and implementation of electronic and electro-optic flight control systems, which have made In-Flight Simulation possible. Written by experts, the respective chapters clearly show the interdependence between various aeronautical disciplines and in-flight simulation methods. Taken together, they form a truly multidisciplinary book that addresses the needs of not just flight test engineers, but also other aeronautical scientists, engineers and project managers and historians as well. Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful. The omission of mathematical equations and in-depth theoretical discussions in favor of fresh discussions on innovative experiments, together with the inclusion of anecdotes and fascinating photos, make this book not only an enjoyable read, but also an important incentive to future research. The book, translated from the German by Ravindra Jategaonkar, is an extended and revised English edition of the book *Fliegende Simulatoren und Technologieträger*, edited by Peter Hamel and published by Appelhans in 2014.

**Aircraft Design** Mohammad H. Sadraey, 2012-11-20 A comprehensive approach to the air vehicle design process using the principles of systems engineering. Due to the high cost and the risks associated with development, complex aircraft systems have become a prime candidate for the adoption of systems engineering methodologies. This book presents the entire process of aircraft design based on a systems engineering approach from conceptual design phase, through preliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraft design, this book covers the components and the issues affected by design procedures. The basic topics that are essential to the process, such as aerodynamics, flight stability and control, aero-structure, and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic

manner to emphasise the integration of the individual components into the overall design. Throughout the book the various design options are considered and weighed against each other, to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero-structure, and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real-world projects. Key features:

- Provides full coverage of the design aspects of an air vehicle including: aeronautical concepts, design techniques and design flowcharts
- Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level
- Includes fundamental explanations for aeronautical engineering students and practicing engineers
- Features a solutions manual to sample questions on the book's companion website

World War II at Sea [2 volumes] Spencer C. Tucker, 2011-11-10 The war at sea was a key aspect of World War II, one that is too-often under-studied. This comprehensive encyclopedia shares current understandings of the struggle to control the seas during that conflict—and it opens our eyes to the reasons sea power continues to be of critical importance today. Scholarly treatment of World War II is constantly changing as new materials inform new interpretations. At the same time, current military operations lead to reevaluation of the tactics and technologies of the past. Marshalling the latest information and insights into this epic conflict, *World War II at Sea: An Encyclopedia* will enable students and other interested readers to explore specific naval

engagements, while also charting the transformation of naval history through innovations in ordnance. In treating the naval aspects of World War II, this two-volume ready reference enhances the understanding of a part of the war that is often overshadowed by the fighting on land and in the air. The encyclopedia focuses on the events, individuals, organizations, and ideas that shaped the world's navies during World War II, as well as the resultant battles that changed naval history. It also covers the numerous innovations that occurred during the conflict and shows how strategies evolved and were executed.

Cuba on the Brink James G. Blight, Bruce J. Allyn, David A. Welch, 2002 With the disintegration of the Soviet Union and international socialism, Cuba now finds itself isolated as the United States continues to press for its economic and political collapse. How Fidel Castro sees Cuba's plight and what he hopes to do about it emerge from this account of a unique conference held in Havana in 1992. The meeting brought together participants in the Cuban missile crisis from the former Soviet Union, Cuba, and the U.S. to discuss its causes and course. This account is now available for the first time in paperback, on the 40th anniversary of the Cuban Missile Crisis. This first meeting between Castro, his ex-Soviet allies, and his American foes produced startling revelations about his dealings with the Soviets, chilling details of the number and kind of Soviet nuclear arms that Cuba possessed in 1962, and an illuminating account of Castro's view of the American threat--then and now. The dramatic exchanges between Castro and such conference participants as Anatoly I. Gribkov, former head of the Warsaw Pact; former U.S. Secretary of Defense Robert McNamara; and Arthur Schlesinger, Jr., Special Assistant to John Kennedy, reveal misperceptions on all sides that led us to the brink of nuclear war. An extraordinary examination of an international crisis, Cuba on the Brink illustrates the ongoing Cuba problem, and will help guide our actions toward other countries

deemed hostile to our national interest.
