Lavochkin Fighters of the Second World War Jason

Moore ,2017-03-13 The Lavochkin fighters remain little known in the West, although with the Yakovlev fighter series they were the backbone of the Red Air Force fighter force during the Second World War. The author rectifies that with this comprehensive history of these fighters. With this book he describes in great detail the three main variants of the Lavochkin fighter series during the Second World War: the only partially successful LaGG-3 inline-engined fighter, the successful radial-engined La-5 fighter, and the superb radial engined La-7 fighter, one of the best piston-engined fighter aircraft of the entire Second World War. Both the design and history of these fighters are featured, including how the mediocre inline engined LaGG-3 was turned into a top notch fighter by the replacement of the Klimov inline engine by the Shvetsov M-82 radial engine. Besides describing the wartime designs he includes a section on the postwar successors to the Second World War fighters, the completely new all metal La-9 and La-11, which saw extensive postwar service. Accurate color profiles illustrate all variants.

Soviet Fighters Doug Richardson,1989-09

The Lavochkin La-7 Dariusz Paduch,2022-09-30 La-7 Soviet single-engine, single-seat fighter aircraft of the World War II period. Developed in the design bureau of S. A. Lavochkin as a successor to the Ła-5FN aircraft. The La-7 was a development of the La-5 design. Both the sizes and shapes of the two aircraft models differed slightly.

Lavochkin's Piston-Engined Fighters (Red Star Series) Yefim Gordon,2003 The latest addition to the Red Star series addresses the formation and early years of OKB-301, the design bureau created by Semyon shortly before the outbreak of the Great Pacific War. This book describes in detail all the piston-engined fighters developed by OKB-301 starting with the LaGG-3, an aircraft that first saw service in the Winter War against Finland.

The story continues with the legendary La-5 and La-7 which rendered sterling service during the war. For Soviet airmen these aircraft were what the Spitfire was to the RAF and the P-51 Mustang was to the Americans. They were a match for the Messerschmitt Bf109 and the Focke Wulf Fw190, and several pilots were awarded the decoration Hero of the Soviet Union for their exploits in these aircraft. The concluding chapters deal with the last of the line, the La-9 and the La-11, which saw combat in China and Korea in the late 1940s and early 1950s. Illustrated with numerous rare and previously unpublished photos drawn from Russian military archives, the book's color content will delight the aviation modeler and anyone interested in Soviet aviation in the World War II era. The colorful nose art, which many aircraft sported, is recorded as are Lavochkin fighters in the liveries of allies of the Soviet Union and captured aircraft in the colors of the enemies of the Soviets.

MIG Alley: The Fight For Air Superiority [Illustrated Edition]
William Y'Blood, 2014-08-15 Includes more than 20 photo illustrations The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

Energiya-Buran Bart Hendrickx, Bert Vis, 2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's

plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

Korean War Aces Robert F Dorr, 2013-01-20 The first virtually all-jet war, the conflict in Korea saw F-86 Sabres of the USAF take on MiG-15s of the North Korean and Chinese air forces. Although the Allied pilots were initially taken aback by the ability of the communist fighter in combat, sound training and skilful leadership soon enabled Sabre pilots to dominate the dogfights over the Yalu River. In all 39 F-86 pilots achieved ace status, and a number of these are profiled in this volume, as are notable pilots from the US Navy, Marine Corps and Royal Navy and, for the first time, the handful of MiG-15 aces.

Messerschmitt Bf 110 Marek Józef Murawski, 2010-07 * Free extras for modelers, including decals and masking foil * Thirty-two sheets of technical drawings and nine color charts The first part of a monograph on the German WW2 aircraft, Messerschmitt Bf 110 describes the development history of its all versions with coverage of changes made in their variants, sub-variants and field modifications. Originally designed as a long range heavy fighter (Zerstörer), Bf 110 was used as a reconnaissance and ground attack aircraft as well as a night fighter with advanced radio, navigation and radar systems. The book features a detailed description of the aircraft's structure and technical data and a chapter about camouflage and markings. Complete with 116 pages, 124 photographs, 32 sheets of technical drawings in 1:48 and 1:72 scale with specification of external changes in production-run versions of the aircraft and 9 color charts with 16 examples of camouflage schemes. Free 1:48 and 1:72 decals for 2 schemes: Bf 110 E-2, '3U+KS' of 8./ZG 26, North Africa, 1942. Bf 110 G-4/R3, 'G9+DC', flown by Oblt. Leo Baro of Stab II./NJG 1,

Germany, May 1945. About the Series Monographs is a series focusing on an individual type of aircraft. Each monograph contains descriptions of the aircraft's origins, its variants and combat history. Each volume includes several hundred archive photographs, technical scale drawings and color profile artworks, with free extras for modelers, including decals and masking foil.

The Former Soviet Union in Transition, 1993

Soviet Secret Projects Tony Buttler, Yefim Gordon, 2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

The Chief Culprit Viktor Suvorov, 2013-03-15 Bestselling author Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and

weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation

engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Militarizing Outer Space Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 *Militarizing Outer Space* explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry. Concentrating on weapons, warfare and violence, this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens. The third and final volume in the groundbreaking European Astroculture trilogy, *Militarizing Outer Space* zooms in on the interplay between security, technopolitics and knowledge from the 1920s through the 1980s. Often hailed as the site of heavenly utopias and otherworldly salvation, outer space transformed from a promised sanctuary to a present threat, where the battles of the future were to be waged. Astroculture proved instrumental in fathoming forms and functions of warfare's futures past, both on earth and in space. The allure of dominating outer space, the book shows, was neither limited to the early twenty-first century nor to current American space force rhetorics.

Rockets and People Volume I (NASA History Series. NASA Sp-2005-4110) Boris Chertok, 2005-01-01 Much has been written in the West on the history of the Soviet space program, but few

Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoir of academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Thirty years later, he was deputy to the founding figure of the Soviet space program, the mysterious Chief Designer Sergey Korolev. Chertok's 60-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes (volumes two through four are forthcoming), academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. This book was edited by Asif Siddiqi, a historian of Russian space exploration, and General Tom Stafford contributed a foreword touching upon his significant work with the Russians on the Apollo-Soyuz Test Project. Overall, this book is an engaging read while also contributing much new material to the literature about the Soviet space program.

European-Russian Space Cooperation Brian

Harvey, 2021-04-10 The story of European-Russian collaboration in space is little known and its importance all too often understated. Because France was the principal interlocutor between these nations, such cooperation did not receive the attention it deserved in English-language literature. This book rectifies that history, showing how Russia and Europe forged a successful partnership that has continued to the present day. Space writer Brian Harvey provides an in-depth picture of how this European-Russian relationship evolved and what factors—scientific, political and industrial—propelled it over the decades. The history begins in the cold war period with the first collaborative ventures between the Soviet Union and European countries, primarily France, followed later by Germany and other

European countries. Next, the chapters turn to the missions when European astronauts flew to Russian space stations, the Soyuz rocket made a new home in European territory in the South American jungle and science missions were flown to study deep space. Their climax is the joint mission to explore Mars, called ExoMars, which has already sent a mission to Mars. Through this close examination of these European-Russian efforts, readers will appreciate an altogether new perspective on the history of space exploration, no longer defined by competition, but rather by collaboration and cooperation.

Moon Viorel Badescu, 2012-03-22 The Earth has limited material and energy resources. Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources. The exploitation of the natural resources of the Moon is a first natural step on this direction. Lunar materials may contribute to the betterment of conditions of people on Earth but they also may be used to establish permanent settlements on the Moon. This will allow developing new technologies, systems and flight operation techniques to continue space exploration. In fact, a new branch of human civilization could be established permanently on Moon in the next century. But, meantime, an inventory and proper social assessment of Moon's prospective energy and material resources is required. This book investigates the possibilities and limitations of various systems supplying manned bases on Moon with energy and other vital resources. The book collects together recent proposals and innovative options and solutions. It is a useful source of condensed information for specialists involved in current and impending Moon-related activities and a good starting point for young researchers.

Space Tethers and Space Elevators Michel van Pelt,2009-06-12 Michel van Pelt explains for the first time the principle of space tethers: what they are and how they can be used in space. He introduces non-technical space enthusiasts to the various possibilities and feasibility of space tethers including the technological challenges and potential benefits. He illustrates how, because of their inherent simplicity, space tethers have the potential to make space travel much cheaper, while ongoing advances in tether material technology may make even seemingly far-fetched ideas a reality in the not too distant future.

Hidden Tibet Sergius L. Kuzmin,2011-01-01 This book traces the history of Tibetan statehood from ancient times to our days, describes the life of the Tibetans at the times of Feudalism and Socialism, the coercive inclusion of Tibet into People's Republic of China, the suppression of the national liberation movement, the Cultural Revolution, and subsequent reforms. Many pictures and data concerning these events are being published for the first time.

Storm the Castle (Marry the Scot, #1) Jolie Vines,2019-03-02 Come, lass. Get on a plane with me.After a business deal goes awry, Laird Callum McRae is in over his head, struggling to keep his castle afloat. He knows exactly what he has to do to save his family of brothers. Collecting a debt from the corrupt man who swindled him is his only mission. But when he meets a compassionate and determined woman, his plans change.Now, he needs to get the girl while confronting her father...Mathilda Storm will do anything for her sister--even if it means entering into a contract for a loveless marriage. After all, it will solve her family's problems. But she doesn't count on meeting a broad-shouldered, rugged Scottish laird. And resisting him is harder than she imagined. As the chemistry between Callum and

Mathilda ignites, Mathilda is torn between her desire and her need to help her family. Can the practical daughter marry the Scot without losing her heart along the way?
