Polikarpov's Biplane Fighters Yefim Gordon, Keith Dexter, 2002 The Soviet Polikarpov design bureau is perhaps best known for the I-16 fighter, the world's first monoplane fighter to have a retractable undercarriage. This aircraft is covered in Volume 3 of the Red Star series. This book explores the development of Polikarpov's fighting biplanes from the 2I-N1 to his first aircraft to see production; to the I-3 and the I-5 created while the designer was in prison. This design paved the way for the I-15 which earned fame as the Chato during the Spanish Civil War and also saw action against the Japanese, and the I-15bis which owed its existence mainly to Soviet Air Force's prejudice against gull wings; and the famous I-153 Chaika, a gull-wing biplane with retractable-landing gear. Experimental versions of this aircraft are also included in the book. A detailed account of the combat role of these aircraft is given as are structural descriptions. The book also includes details of the ill-starred I-190 which was to have superseded the Chaika and of privately owned I-15bis and I-153s which have been restored to airworthy condition.

King of Fighters -- Nikolay Polikarpov and His Aircraft Designs Mikhail Maslov, 2021-01-19 In the century-long history of the conquest of the sky there have been a number of outstanding personalities. Among them is the name of designer Nikolay Polikarpov (1892-1944), which is inseparably associated with the best achievements of the Russian and Soviet aviation. His practical activity in the aircraft industry began upon graduation from the Petersburg Polytechnic Institute in 1916. Aged 25, Polikarpov was sent to the Russo-Baltic Wagon Factory (RBWF), where the four-engined Ilya Muromets bombers designed by Igor Sikorsky were being built at that time. Later, beginning from August 1918, he worked in Moscow at the Dux aircraft factory. For several years, he was engaged in improving products manufactured by the factory, and upgrading production aircraft to accommodate the available engines, equipment and materials. From 1922, Polikarpov focused his attention on fighter aircraft, creation of which was a priority for him during the following years. The first of them was the IL-400 monoplane, designated I-1 by the Air Force. The monoplane was followed by biplanes including the 2I-N1 (1925), the I-3 (1927), the D-2 (1928), and the I-6 (1929). It was specialization in fighter aircraft which, from then on, became his mission in life. At the peak of his career as a designer, Polikarpov was informally styled 'the King of Fighters', which was quite in line with the level of his merits and achievements. In the 1930's, the TsKB-3 (I-15) and TsKB-12 (I-16) fighters were designed under Polikarpov's supervision. These aircraft were the designer's undoubtable success. They also were the main combat fighters in service with the Red Army Air Force. For the creation of the I-15 and the I-16 fighters, Polikarpov was awarded the Order of Lenin in 1935, and the Order of the Red Star a year later. In the 1930's, Nikolay Polikarpov devised a lot of aircraft of various designs, the majority of which can be described as 'advanced' and 'innovative'. In 1940, Polikarpov was granted the degree of the Doctor of Engineering and the title of the Chief Designer of the highest category. In the same year, he was awarded the title of the Hero of Socialist Labor. A year later, he became a recipient of the Stalin Prize. The gifted Soviet engineer was destined to live only 52 years. On 30 July 1944, Nikolay Polikarpov died of a rapidly evolving oncological disease. To venerate his memory, the U-2 trainer has ever since been designated the Po-2 (Polikarpov-2). The book which is presented to the reader describes all Polikarpov's original projects, both those put into reality and unimplemented ones. It took the author many years to prepare for the creation of the book. The author studied materials on the respective topics in all Russian archives, and made use of remembrances of Polikarpov's contemporaries and publications by other researchers. For purposes of clarity and in order to facilitate publication, the author split the book on Nikolai Polikarpov's aircraft into two parts - the 'Biplane Era' and the 'Monoplane Era'. Indeed, during the designer's activity from 1918 through to 1932, he devoted himself predominantly to creating biplanes. For the 1920's, the biplanes were a preferable option; they were more common, more reliable, better studied, and even more desirable for the Red Army Air Force. The first design of the IL-400 (I-1) monoplane fighter appeared as early as 1923; however, it was through its novelty and unpredictability that the aircraft failed to achieve the deserved success. It should be noted that the U-2 (Po-2) and the R-5 biplanes, which were created during that period, became one of the best Polikarpov aircraft, and brought him recognition as a reputed designer. In the 1930's, Nikolai Polikarpov's activity reached its pinnacle. It was during that period that he created his advanced monoplanes such as the I-16, the I-17, the VIT-2, and others. He continued his fruitful and quite successful activity in the area of creating modern aircraft during the war of 1941--45 as well.

The Encyclopedia of Aerodynamics Frank Hitchens, 2015-11-25 The Encyclopedia of Aerodynamics was written for pilots at all levels from private pilot to airline pilot, military pilots and students of aerodynamics as a complete reference manual to aerodynamic terminology. General aerodynamic text books for pilots are relatively limited in their scope while aerodynamic text books for engineering students involve complex calculus. The references in this book, The Encyclopedia of Aerodynamics, are clearly described and only basic algebra is used in a few references but is completely devoid of any calculus - an advantage to many readers. Over 1400 references are included with alternative terms used where appropriate and cross-referenced throughout. The text is illustrated with 178 photographs and 96 diagrams. The Encyclopedia of Aerodynamics is an ideal aerodynamic reference manual for any pilot's bookshelf.

Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Rockets and People Volume I (NASA History Series. NASA Sp-2005-4110) Boris Chertok, 2005-01-01 Much has been written in the West on the history of the Soviet space program, but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoir of academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Thirty years later, he was deputy to the founding figure of the Soviet space program, the mysterious Chief Designer Sergey Korolev. Chertok's 60-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes (volumes two through four are forthcoming), academician Chertok

not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. This book was edited by Asif Siddiqi, a historian of Russian space exploration, and General Tom Stafford contributed a foreword touching upon his significant work with the Russians on the Apollo-Soyuz Test Project. Overall, this book is an engaging read while also contributing much new material to the literature about the Soviet space program.

Women War Photographers Anne-Marie Beckmann, Felicity Korn, 2019-09-03 Discover eight remarkable women war photographers who have documented harrowing and unforgettable crises and combat around the world for the past eighty years. Women have been on the front lines of war for more than a century. With access to places men cannot go, the women who photograph war lend a unique perspective to the consequences of conflict. From intimate glimpses of daily life to the atrocities of war, this exhibition catalog reveals the range and depth of eight women photographers' contributions to wartime photojournalism. Each photographer is introduced by a brief, informative essay followed by reproductions of a selection of their works. Included here are images by Lee Miller, who documented the liberation of Dachau and Buchenwald. The first woman journalist to parachute into Vietnam, Catherine Leroy was on the ground during the Tet Offensive. Susan Meiselas raised international awareness around the Somoza regime's catastrophic effects in Nicaragua. German reporter Anja Niedringhaus worked on assignment in nearly every major conflict of the 1990s, from the Balkans to Libya, Iraq to Afghanistan. The work of Carolyn Cole, Françoise Demulder, Christine Spengler, and Gerda Taro round out this collective profile of courage under pressure and of humanity in the face of war.

Aerodynamic Characteristics of the NACA 747A315 and 747A415 Airfoils from Tests in the NACA Two-dimensional Low-turbulence Pressure Tunnel Albert E. Von Doenhoff, Louis S. Stivers, 1944 Summary: Two low-drag airfoils, the NACA 747A315 and the NACA 747A415, designed to have reduced pitching moments about the quarter-chord point and moderately high values of the design lift coefficient have been tested in the NACA two-dimensional low-turbulence pressure tunnel. Section lift, drag, and pitching-moment coefficients are presented for Reynolds numbers of 3 x 10⁶, 6 x 10⁶, and 9 x 10⁶, together with section lift and section drag data for a Reynolds number of 6 x 10⁶ for the same airfoils with roughened leading edges.

Spitfire VC vs A6M2/3 Zero-sen Peter Ingman, 2019-05-30 Just weeks after Pearl Harbor, Darwin was mauled by a massive Japanese attack. Without a single fighter to defend Australian soil, the Australian government made a special appeal to Britain for Spitfires. A year later the Spitfire VC-equipped No 1 Fighter Wing, RAAF, faced the battle-hardened 202nd Kokutai of the IJN, equipped with A6M2 Zero-sens, over Darwin. This was a gruelling campaign between evenly matched foes, fought in isolation from the main South Pacific battlegrounds. Pilots on either side had significant combat experience, including a number of Battle of Britain veterans. The Spitfire had superior flight characteristics but was hampered by short range and material defects in the tropical conditions, while the Japanese employed better tactics and combat doctrine inflicting serious losses on the over-confident Commonwealth forces. Fully illustrated with detailed full-colour artwork, this is the gripping story of two iconic aircraft facing off against each other above Australia.

Propeller Aerodynamics Frank Hitchens, 2015-05-11 Classical aerodynamics is a compulsory study subject for pilots at all levels of experience. Propeller Aerodynamics is a subset of this fascinating subject. Propellers have their unique aerodynamic terminology, forces and handling requirements, knowledge of which all pilots must be aware of to safely handle the aircraft they are flying. Incorrect propeller handling can cause damage to the aircraft and reduce performance efficiency. Most aerodynamic text books only give a brief view of propeller aerodynamics; however this book Propeller Aerodynamics delves more deeply into this subject. The book covers the history and operation of aircraft propellers, prop pitch, thrust, efficiency, aircraft stability, prop forces, constant-speed units and more. This is all essential reading for the pilot progressing to more advanced high-performance aircraft.

Fw 190 Sturmböcke vs B-17 Flying Fortress Robert Forsyth, 2009-11-24 For the first time in the best-selling Duel series, Osprey Publishing presents the horrifying aerial clash between a fighter and a bomber. The Fw 190 was one of the best air superiority aircraft of World War II. When it first appeared over the Channel in 1941 it sent shockwaves through the Allied air commands. By 1944, these fighters had been up-gunned to serve as the front line of defence against the Allied bombing campaign. Although the Fw 190s were responsible for shooting down hundreds of Allied bombers, they met their match against the United States Air-Force B-17 'Flying Fortress.' Capable of carry 4,000 lbs of bombs and bristling with .50-cal machine guns, the B-17 could sow death in every direction. Using brand-new artwork and first-hand accounts, this book recreates the deadly drama in the skies above Germany in 1944.

An-My Lê on Contested Terrain (Signed Edition) DAN. LEERS, 2020-06-16 An-My Lê On Contested Terrain is the first comprehensive survey of the Vietnamese American artist, published on the occasion of a major exhibition organized by Carnegie Museum of Art, Pittsburgh. Drawing, in part, from her own experiences of the Vietnam War, Lê has created a body of work committed to expanding and complicating our understanding of the activities and motivations behind conflict and war. Throughout her thirty-year career, Lê has photographed noncombatant roles of active-duty service members, often on the sites of former battlefields, including those reserved for training or the reenactment of war, and those created as film sets. This publication includes selections from her well-known series *Việt Nam*, *Small Wars*, *29 Palms*, and *Events Ashore*, in addition to never-before-seen images, including recent photographs from the US-Mexico border, formative early work, and lesser-known projects. Essays by the organizing curator Dan Leers and curator Lisa J. Sutcliffe, as well as a dialogue between Lê and Pulitzer Prize-winning author Viet Thanh Nguyen, address the ways in which Lê's quiet, nuanced work complicates the landscapes of conflict that have long informed American identity.
