King of Fighters -- Nikolay Polikarpov and His Aircraft Designs

Mikhail Maslov, 2021-01-19 In the century-long history of the conquest of the sky there have been a number of outstanding personalities. Among them is the name of designer Nikolay Polikarpov (1892-1944), which is inseparably associated with the best achievements of the Russian and Soviet aviation. His practical activity in the aircraft industry began upon graduation from the Petersburg Polytechnic Institute in 1916. Aged 25, Polikarpov was sent to the Russo-Baltic Wagon Factory (RBWF), where the four-engined Ilya Muromets bombers designed by Igor Sikorsky were being built at that time. Later, beginning from August 1918, he worked in Moscow at the Dux aircraft factory. For several years, he was engaged in improving products manufactured by the factory, and upgrading production aircraft to accommodate the available engines, equipment and materials. From 1922, Polikarpov focused his attention on fighter aircraft, creation of which was a priority for him during the following years. The first of them was the IL-400 monoplane, designated I-1 by the Air Force. The monoplane was followed by biplanes including the 2I-N1 (1925), the I-3 (1927), the D-2 (1928), and the I-6 (1929). It was specialization in fighter

aircraft which, from then on, became his mission in life. At the peak of his career as a designer, Polikarpov was informally styled 'the King of Fighters', which was quite in line with the level of his merits and achievements. In the 1930's, the TsKB-3 (I-15) and TsKB-12 (I-16) fighters were designed under Polikarpov's supervision. These aircraft were the designer's undoubtable success. They also were the main combat fighters in service with the Red Army Air Force. For the creation of the I-15 and the I-16 fighters, Polikarpov was awarded the Order of Lenin in 1935, and the Order of the Red Star a year later. In the 1930's, Nikolay Polikarpov devised a lot of aircraft of various designs, the majority of which can be described as 'advanced' and 'innovative'. In 1940, Polikarpov was granted the degree of the Doctor of Engineering and the title of the Chief Designer of the highest category. In the same year, he was awarded the title of the Hero of Socialist Labor. A year later, he became a recipient of the Stalin Prize. The gifted Soviet engineer was destined to live only 52 years. On 30 July 1944, Nikolay Polikarpov died of a rapidly evolving oncological disease. To venerate his memory, the U-2 trainer has ever since been designated the Po-2 (Polikarpov-2). The book which is presented to the reader describes all Polikarpov's original projects, both those

put into reality and unimplemented ones. It took the author many years to prepare for the creation of the book. The author studied materials on the respective topics in all Russian archives, and made use of remembrances of Polikarpov's contemporaries and publications by other researchers. For purposes of clarity and in order to facilitate publication, the author split the book on Nikolai Polikarpov's aircraft into two parts - the 'Biplane Era' and the 'Monoplane Era'. Indeed, during the designer's activity from 1918 through to 1932, he devoted himself predominantly to creating biplanes. For the 1920's, the biplanes were a preferable option; they were more common, more reliable, better studied, and even more desirable for the Red Army Air Force. The first design of the IL-400 (I-1) monoplane fighter appeared as early as 1923; however, it was through its novelty and unpredictability that the aircraft failed to achieve the deserved success. It should be noted that the U-2 (Po-2) and the R-5 biplanes, which were created during that period, became one of the best Polikarpov aircraft, and brought him recognition as a reputed designer. In the 1930's, Nikolai Polikarpov's activity reached its pinnacle. It was during that period that he created his advanced monoplanes such as the I-16, the I-17, the VIT-2, and others. He continued his fruitful and quite

successful activity in the area of creating modern aircraft during the war of 1941--45 as well.

Energiya-Buran Bart Hendrickx,Bert Vis,2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

The Chinese Air Force Richard P. Hallion,Roger Cliff,Phillip C. Saunders,Center for the Study of Chinese Military Affairs (National Defense University),2012-10-03 Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This books offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.

MIG Alley: The Fight For Air Superiority [Illustrated Edition]

William Y'Blood, 2014-08-15 Includes more than 20 photo illustrations The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

The Spy Who Changed History Svetlana Lokhova, 2019-06-13 'A superbly researched and groundbreaking account of Soviet espionage in the Thirties ... remarkable' 5* review, Telegraph On the trail of Soviet infiltrator Agent Blériot, in this bestseller, Svetlana Lokhova takes the reader on a thrilling journey through Stalin's most audacious intelligence operation.

The Chief Culprit Viktor Suvorov, 2013-03-15 Bestselling author

Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of

Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

Buy, Build, Or Steal Phillip Charles Saunders, Joshua K.

Wiseman, 2011 This study identifies potential aviation technology development and procurement strategies, presents a general model of the options available to developing countries, and applies that model to explain Chinese procurement and aviation technology acquisition efforts over the last 60 years. The model articulates three main technology procurement avenues: purchase (buy), indigenous development (build), and espionage (steal), and three subavenues: reverse engineering (combining buy/steal and build), coproduction (combining buy and build), and codevelopment (combining buy and build, with an emphasis on build). It examines the costs, benefits, and tradeoffs inherent in each approach. Four

variables influence decisions about the mix of strategies: (1) a country's overall level of economic development, in particular the state of its technical/industrial base; (2) the technological capacity of a country's military aviation sector; (3) the willingness of foreign countries to sell advanced military aircraft, key components, armaments, and related production technology; and (4) the country's bargaining power vis-avis potential suppliers.

A New International History of the Spanish Civil War Michael Alpert, 1994-06-28 '...a lucid and scholarly account of an important and immensely complex subject...Dr. Alpert's command of a broad range of archival material, printed documents and secondary works in six languages is extremely impressive.' - P. Preston, London School of Economics and Political Science It is now twenty years since a study was dedicated to the international aspects of the Spanish Civil War and this new synthesis covering the whole of the era and setting it against major events of the late 1930s is well overdue. Michael Alpert takes full advantage of newly accessible archival sources to disentangle the intricacies of this complex issue.

Russia's Air Power at the Crossroads Benjamin S. Lambeth, 1996 This report assesses trends and prospects in

Russian military aviation, drawing on the extensive reportage on air power in the Russian defense literature since the onset of glasnost in 1986.

Ramjet Engines Mikhail Makarovich Bondariuk,1969

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook

provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

A Dance With Death Anne Noggle, 1994 For their heroism and success against the enemy, two of the women's regiments were honored by designation as Guard regiments. At least thirty women were decorated with the gold star of Hero of the Soviet Union, their nation's highest award.

Korean War Aces Robert F Dorr, 2013-01-20 The first virtually all-jet war, the conflict in Korea saw F-86 Sabres of the USAF take on MiG-15s of the North Korean and Chinese air forces. Although the Allied pilots were initially taken aback by the ability of the communist fighter in combat, sound training and skilful leadership soon enabled Sabre pilots to dominate the dogfights over the Yalu River. In all 39 F-86 pilots achieved ace status, and a number of these are profiled in this volume, as are notable pilots from the US Navy, Marine Corps and Royal Navy and, for the first time, the

handful of MiG-15 aces.

The Diary of Georgi Dimitrov, 1933–1949

Georgi Dimitrov (1882–1949) was a high-ranking Bulgarian and Soviet official, one of the most prominent leaders of the international Communist movement and a trusted member of Stalin's inner circle. Accused by the Nazis of setting the Reichstag fire in 1933, he successfully defended himself at the Leipzig Trial and thereby became an international symbol of resistance to Nazism. Stalin appointed him head of the Communist International (Comintern) in 1935, and he held this position until the Comintern's dissolution in 1943. After the end of the Second World War, Dimitrov returned to Bulgaria and became its first Communist premier. During the years between 1933 and his death in 1949, Dimitrov kept a diary that described his tumultuous career and revealed much about the inner working of the international Communist organizations, the opinions and actions of the Soviet leadership, and the Soviet Union's role in shaping the postwar Eastern Europe. This important document, edited and introduced by renowned historian Ivo Banac, is now available for the first time in English. It is an essential source for information about international Communism, Stalin and Soviet policy, and the origins

of the Cold War.

The Korean War Stanley Sandler, 2021-09-15 The Korean War has been termed The Forgotten War or the Unknown War. It is a conflict which never assumed the mythic character of the American Civil War or World War II. However, this book asserts, it would be impossible to understand the Cold War and indeed post 1945 global history without knowledge of the Korean War. Providing a history of the Korean peninsula before the war and including a detailed analysis of the fighting itself, *The Korean War* goes beyond the battlefield to deal with the war in the air, ground attack, and air evacuation. The study also evaluates the contributions of the UN naval forces, the impact of the war on various homefronts and issues such as defectors, opposition to the war, racial segregation and integration, POWs and the media. Recently-released Soviet documents are used to assess the role of China, the Soviet Union, North and South Korea and the allied forces in the conflict. This fascinating work offers a unique analysis of the Korean War and will be invaluable to students of twentieth-century history, particularly those concerned with American and Pacific history.

The Encyclopedia of Aerodynamics Frank Hitchens, 2015-11-25

The Encyclopedia of Aerodynamics was written for pilots at all levels from private pilot to airline pilot, military pilots and students of aerodynamics as a complete reference manual to aerodynamic terminology. General aerodynamic text books for pilots are relatively limited in their scope while aerodynamic text books for engineering students involve complex calculus. The references in this book, The Encyclopedia of Aerodynamics, are clearly described and only basic algebra is used in a few references but is completely devoid of any calculus - an advantage to many readers. Over 1400 references are included with alternative terms used where appropriate and cross-referenced throughout. The text is illustrated with 178 photographs and 96 diagrams. The Encyclopedia of Aerodynamics is an ideal aerodynamic reference manual for any pilot's bookshelf.

Worked Examples in Physics V. L. Zubov, V. P.

Shal'nov, 2013-10-22 *Worked Examples in Physics: A Textbook for Private Study* consists of worked examples encountered at examinations in secondary schools at Moscow University. The examples for this collection focus on those physical questions, situations, and laws that give rise to the most number of errors. Organized into two parts, this book begins with an overview of

several problems that have been specially selected to show in detail the methods of applying the more important laws, which often are not mastered by the student. This text then discusses the general methods of solving problems by means of the resolution and composition of the motion. This book discusses as well a large number of examples that serves to indicate how one may reduce the solution of a complicated problem on curvilinear motion to the solution of a simple and previously solved problem dealing with two independent linear motions. This book is a valuable resource for secondary school students.

Wings, Women, and War Reina Pennington, 2002-01-22 The Soviet Union was the first nation to allow women pilots to fly combat missions. During World War II the Red Air Force formed three all-female units-grouped into separate fighter, dive bomber, and night bomber regiments-while also recruiting other women to fly with mostly male units. Their amazing story, fully recounted for the first time by Reina Pennington, honors a group of fearless and determined women whose exploits have not yet received the recognition they deserve. Pennington chronicles the creation, organization, and leadership of these regiments, as well as the experiences of the pilots, navigators, bomb loaders, mechanics,

and others who made up their ranks, all within the context of the Soviet air war on the Eastern Front. These regiments flew a combined total of more than 30,000 combat sorties, produced at least thirty Heroes of the Soviet Union, and included at least two fighter aces. Among their ranks were women like Marina Raskova (the Soviet Amelia Earhart), a renowned aviator who persuaded Stalin in 1941 to establish the all-women regiments; the daredevil night witches who flew ramshackle biplanes on nocturnal bombing missions over German frontlines; and fighter aces like Liliia Litviak, whose twelve kills are largely unknown in the West. She also tells the story of Alexander Gridnev, a fighter pilot twice arrested by the Soviet secret police before he was chosen to command the women's fighter regiment. Pennington draws upon personal interviews and the Soviet archives to detail the recruitment, training, and combat lives of these women. Deftly mixing anecdote with analysis, her work should find a wide readership among scholars and buffs interested in the history of aviation, World War II, or the Russian military, as well as anyone concerned with the contentious debates surrounding military and combat service for women.

The Officer's Handbook □□□□□□□□ □□□□□□□□

□□□□□□,1977

Soviet Secret Projects Tony Buttler,Yefim Gordon,2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

Unveiling the Power of Verbal Artistry: An Emotional Sojourn

through Soviet Polikarpov R 5 Bomber Free Aircraft Paper Model Download

In a global inundated with monitors and the cacophony of instantaneous connection, the profound energy and psychological resonance of verbal art usually disappear in to obscurity, eclipsed by the regular onslaught of sound and distractions. Yet, set within the lyrical pages of **Soviet Polikarpov R 5 Bomber Free Aircraft Paper Model Download**, a fascinating function of fictional brilliance that pulses with natural feelings, lies an wonderful trip waiting to be embarked upon. Penned with a virtuoso wordsmith, that mesmerizing opus books viewers on a psychological odyssey, gently exposing the latent potential and profound affect stuck within the elaborate web of language. Within the heart-wrenching expanse of this evocative analysis, we will embark upon an introspective exploration of the book is key themes, dissect its captivating writing style, and immerse ourselves in the indelible impression it leaves upon the depths of readers souls.
