Soviet Tank Company Tactics Defense Intelligence Agency, 2019-07-25 Soviet Tank Company Tactics, May 1976 We were surprised to find there were no clean copies in print so we decided to reconstitute the report as best we could. Unfortunately, the photos are not very good and the originals are nowhere to be found, so we did not replace them. Rather than change the document, we decided to add a new document at the end that would show current (2019) Russian tanks and include what little information is available. As far as tactics go, not really sure how the new tanks, such as the T-14 will cause changes to Russian tank tactics but some of the information is still valid today, such as the use of snorkel, night vision and the effects of poor weather conditions. You will note that we added some additional information regarding Russian New Generation Warfare (RNGW), 4th Generation Warfare, Hybrid War, and new Russian weapons at the end including: - 1K17 Szhatie (1K17 Сжатие) Russian Stiletto Laser Tank - Combat Laser System (Peresvet) Russian Laser Cannon - T-14 Armata Main Battle Tank - T-15 Heavy Infantry Combat Vehicle - Kurganets-25 Light Tracked Armored Vehicle - 2S35 Koalitsiya-SV 152-mm Self-Propelled Howitzer - VPK-7829 Bumerang Modular Infantry Wheeled Fighting Vehicle Why buy a book you can download for free? We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all

those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these paperbacks as a service so you don't have to. T-34 Medium Tank (1939-1943) Mikhail Baryatinskiy, 2007 This is the fourth title in our new Russian Armour series which has been designed to provide much needed authoritative information on the classic Soviet tank designs of the 20th century. The books are written by Russian experts and the research has been done in Russian archives. The series has already established itself as required reading for all those interested in the development of armored warfare over the past 100 years. The latest title examines in detail the T-34, one of the most famous and successful vehicles in the history of armored warfare. The T-34 was a Soviet medium tank produced from 1940 to 1958. It was widely regarded as the world's best tank when the Soviet Union entered the Second World War, and although its armour and armament were surpassed by later World War II tanks, it is credited as the war's most effective, efficient and influential design. First produced at the KhPZ factory in Kharkov, it was the mainstay of Soviet armored forces throughout World War II, and widely exported afterwards. At least 39 countries are known to have operated T-34s. It was the most-produced tank of the war, and the second most-produced tank of all time, after its successor, the T-54/55 series. The T-34 was still in service with twenty-seven countries as late as 1996. There are hundreds of surviving T-34s. Examples of the type are in the

military collections and museums around the globe, and hundreds more serve as war memorials in Russian and former Eastern bloc countries. Aimed at the modeler, military historian and wargamer, we believe that the Russian Armour series provides authoritative information on the classic Soviet tank designs of the 20th century, to a level of detail probably not previously available in the English language.

Soviet T-54 Main Battle Tank James Kinnear, Stephen Sewell, 2018-11-29 The menacing silhouette of the T-54 tank prowling down streets of Eastern European capitals or roaring across fields in massive exercises remains one of the most enduring images of Soviet power in the early years of the Cold War. Its sleek and unmistakable shape was a warning to any nation that wanted to stand against the USSR. Yet all of this masked a flawed, outdated design, and when T-54s began to clash with the Western armoured vehicles in proxy wars in Southeast Asia and the Middle East, they were found to be on the losing side of many of the battles. Containing over 500 stunning contemporary and modern photographs, and written by two experts on Soviet armour, this authoritative book tells the complete story of the T-54, one of the most widely produced tanks of all time, including many previously unheard of variants.

Soviet Tanks in Combat, 1941-1945 Steve Zaloga, 1997

T-34 Anthony Tucker-Jones, 2015-03-31 “The most iconic tank for the Red Army in World War II . . . a pictorial history of the design, development and usage of the T-34 and its derivatives.” —Military Archive Research It could be said that the T-34 was the tank that won the Second World War. In total, 57,000 were produced between 1941 and 1945. Stalin’s tank factories outstripped Hitler’s by a factor of three to one, and production of the

T-34 also exceeded that of the famed American M4 Sherman. Not only did this output swamp German panzer production, the T-34 was a robust, no-frills war-winning design—easy to manufacture and reliable. Its sloping armor was innovative at the time, and its wide tracks suited it to off-road warfare. Crucially, it required little maintenance in comparison to German tanks, and its chassis was used as the basis for a range of assault guns: the SU-85, SU-100, and SU-122. Anthony Tucker-Jones's photographic history of this exceptional armored vehicle follows its story through the course of the war, from its combat debut against the Wehrmacht during Operation Barbarossa, through the Red Army's defeats and retreats of 1941 and 1942, to the tide-turning victories at Stalingrad and Kursk, and on through the long, rapid Soviet advance across Ukraine and Byelorussia to Berlin. As well as a range of rare archive photographs and those of a surviving example of the T-34, the book features specially commissioned color illustrations. "There is a plethora of information for the modeler and armor enthusiasts . . . I really don't think you would go wrong with this book. Recommended." —inSCALE

T-34-85 Medium Tank 1944-94 Steven J. Zaloga, 2013-08-20 The T-34-85 tank is one of those rare weapons that have remained in service for more than half a century. First introduced in 1944, it has seen combat in nearly every corner of the globe. Steven Zaloga and Jim Kinnear look at this long-serving tank at length. Although long obsolete in Europe, it has proven a reliable and potent weapon in many Third World conflicts, and is still in service with more than a dozen armies around the world.

Light Tanks Mikhail Baryatinskiy, 2006 It is one of the ironies of Soviet tank development that a country opposed to free enterprise and capitalism was largely reliant on influences

from Britain and the USA for many of its early designs. However, unhindered by many of the tactical constraints that affected tank development in the West, the Red Army was able to acquire and develop technology that was under-rated in both Britain and the USA. From Britain, the famous manufacturer Vickers produced a Six-Ton light tank; effectively rejected by the War Office, one example was acquired by the Russians and this formed the basis of the Russian T-26 of 1931. Further British designs also influenced the later light tanks, equipment which was pivotal to the Red Army during its campaigns in Manchuria, Finland and against the initial German assault in 1941. In the USA, Walter Christie was also largely ignored as a designer but, as with Vickers, his designs came to be highly important. His influence was seen in the 'BT' - short for 'Bystrochodri' or 'Fast Tank' - series of light-medium tanks that was first introduced in 1932. The BT series saw service in Spain, Manchuria, Finland and in the defense of Russia itself in 1941. The critical aspect of the Christie design was that the vehicles were capable of operating both with nor without tracks; in the latter case eight road wheels carried the weight of the vehicle, with steering being achieved via a steering wheel acting in conjunction with the clutch/brake system. In the second of the new 'Soviet Tanks' series, Mikhail Baryatinsky provides the reader with a comprehensive account of the development and operational record of Soviet light tanks. Utilizing photographs, line drawings and specially prepared artworks, he provides a detailed portrait of these highly successful tanks. Aimed at the modeler, military historian and war gamer, the new 'Soviet Tanks' series is designed to provide, probably for the first time in the English language, authoritative information on the classic Soviet tank designs of the 20th century. The series will be required reading for all those interested in the development

of armored warfare over the past 100 years.

T-34/76 Medium Tank 1941-45 Steven J. Zaloga, 2013-08-20 The T-34 was the most influential tank design of World War 2. When first introduced into combat in the summer of 1941, it represented a revolutionary leap forward in tank design. Its firepower, armour protection and mobility were superior to that of any other medium tank of the period. This superiority did not last long. While the T-34 underwent a series of incremental improvements during 1943, it was being surpassed by new German tank designs, most notably the Panther. This title traces the life of the original T-34 through all its difficulties to eventual success.

Russian and Soviet Tanks 1914-1941 Maximino Argüelles Martinez, 2014-02-17 About the evolution of the Soviet offensive doctrine during World War II. Where did this doctrine and armored formations that takes practice arise?. Why was the USSR as a nation which in 1940 developed a tank as advanced as the T-34?. 100 pages trying to answer these and other questions with a description of the principal armored vehicles and the formations in which were integrated from its beginnings in the Russian Empire until June 22, 1941.

The T-34/76 Tank Przemysław Skulski, Mariusz Filipiuk, 2009-01-19 The T-34 was possibly the best medium tank of WW2, and was a major influence on all subsequent tank designs. It served in huge numbers with the Soviet Army and its allies, though it was also used by their enemies. This book describes the colors and markings applied to the T-34/76 in service with all major users, including unit and tactical markings, individual names and insignia, and air recognition features. Illustrated with photos and color profiles, this is

essential reading for armor enthusiasts and modelers.

TM 9-750 Ordnance Maintenance Lee Medium Tanks M3, M3a1, and M3a2: Technical Manual War Department, 2013-05-01 The Lee Medium Tank M3 was an American tank used during World War II. In Britain the tank was called by two names based on the turret configuration. Tanks employing US pattern turrets were called the General Lee, named after Confederate General Robert E. Lee. Variants using British pattern turrets were known as General Grant, named after U.S. General Ulysses S. Grant. Design commenced in July of 1940, and the first M3s were operational in late 1941. The M3 was well armed and armored for the period, but due to design flaws (high silhouette, archaic sponson mounting of the main gun, below average off-road performance) it was not satisfactory and was withdrawn from front line duty as soon as the M4 Sherman became available in large numbers. Of the 6,258 M3s produced by the U.S., 2,855 M3s were supplied to the British Army, and about 1,386 to the Soviet Union. One of the American M3 medium tank's first actions during the war was in 1942, during the North African Campaign. British Lees and Grants were in action against Rommel's forces at the disastrous Battle of Gazala on May 27th that year. They continued to serve in North Africa until the end of that campaign. A regiment of M3s was also used by the U.S. 1st Armored Division in North Africa. In the North African campaign, the M3 was generally appreciated for its mechanical reliability, good armor and heavy firepower. Created in 1942, this technical manual reveals a great deal about the M3's design and capabilities. Intended as a manual for those charged with maintenance, it details many aspects of its engine, cooling, transmission and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form.

Seek, Strike, and Destroy Christopher Richard Gabel, 1986 In the seventy years that have passed since the tank first appeared, antitank combat has presented one of the greatest challenges in land warfare. Dramatic improvements in tank technology and doctrine over the years have precipitated equally innovative developments in the antitank field. One cycle in this ongoing arms race occurred during the early years of World War II when the U.S. Army sought desperately to find an antidote to the vaunted German blitzkrieg. This Leavenworth Paper analyzes the origins of the tank destroyer concept, evaluates the doctrine and equipment with which tank destroyer units fought, and assesses the effectiveness of the tank destroyer in battle.

Designing the T-34 Peter Samsonov, 2019-12-27 When the German army launched Operation Barbarossa – the invasion of the Soviet Union – on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it “the finest tank in the world”. Using

original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war's most revolutionary tank design.
