Anaesthesia for Veterinary Nurses Liz Welsh,2009-08-07 Anaesthesia for Veterinary Nurses has been written specifically for veterinary nurses by veterinary nurses and veterinary surgeons. Easy to read and understand, it provides detailed coverage of the physiological, pharmacological and physical aspects of anaesthesia. Fully updated and reflecting recent changes to veterinary nursing qualifications, this second edition is now also illustrated in colour. Sedation and anaesthesia are a crucial part of veterinary practice, and the protocols and methods involved are often complex and vary considerably from animal to animal. In addition to cats and dogs, Anaesthesia for Veterinary Nurses contains detailed sections on rabbits, rodents, birds, reptiles, and larger animals. Suitable for those with or without previous subject knowledge, this book is ideal for quick reference by veterinary nurses and technicians in practice, or for more substantial study by students. • Reflects recent changes to veterinary nursing qualifications, current terminology and drugs in use. • Includes chapters on small mammals, birds, reptiles, and large animals. • Now illustrated with colour photographs.

Mapping Different Geographies Karel Kriz,William Cartwright,Lorenz Hurni,2010-09-15 This book is the outcome of the work of contributors who participated in the wo- shop “Mapping Different Geographies (MDG)” in February 2010, held in Puchberg am Schneeberg, Austria. This meeting brought together cartographers, artists and geoscientists who research and practice in applications that focus on enhancing o- to-one communication or develop and evaluate methodologies that provide inno- tive methods for sharing information. The main intention of the workshop was to investigate how ‘different’ geographies are being mapped and the possibilities for developing new theories and techniques for information design and transfer based on place or location. So as to communicate these concepts it was important to appreciate the many contrasting meanings of ‘mapping’ that were held by workshop participants. Also, the many (and varied) viewpoints of what different geographies are, were ela- rated upon and discussed. Therefore, as the focus on space and time was embedded within everyone’s felds of investigation, this was addressed during the workshop. This resulted in very engaging discourse, which, in some cases, exposed the restrictions that certain approaches need to consider. For participants, this proved to be most useful, as this allowed them to appreciate the limits and restrictions of their own approach to understanding and representing different geographies. As well, the workshop also was most helpful as a vehicle for demonstrating the common ground of interest held by the very diverse areas of endeavour that the workshop participants work within.

Cartographic Relief Presentation Eduard Imhof,2007 This new edition of Cartographic Relief Presentation was edited for clarity and consistency but preserves Imhof’s insightful commentary and analytical style. Color maps, aerial photographs, and instructive illustrations are faithfully reproduced. The book offers guidelines for properly rendering terrain in maps of all types and scales whether drawn by traditional means or with the aid of a computer. Cartographic Relief Presentation was among the essential mapping and graphical design books of the twentieth century. Its continuing relevance for the twenty-first century is assured with this publication.--BOOK JACKET.

Creating Space Mat Irvine,2002 Foreword by Sir Arthur C Clarke. Space exploration began with model and toy rockets. History shows that the greatest Rocketeers began their careers flying model rockets. Now in this book the story of the space race is told in dazzling colour. From the birth of models to the present day the toy rockets have often inspired the real rockets of the future. In fact model manufacturers like Revell and Aurora were frequently in trouble with the defence department for revealing military secrets! This is the Story of the Space Age, and uses the models to illustrate the way history twisted and turned to put us where we are today -- and maybe how space travel will develop in the future.

Map Use A. Jon Kimerling,2010 Map Use: Reading and Analysis demonstrates the importance of understanding the significant distinctions, formats, and functionality of maps. The book is specifically designed for course adoption, but is written for anyone who wants to effectively read and use maps. Map Use: Reading and Analysis will likely remain a permanent fixture in any cartographic resource library.

True-3D in Cartography Manfred Buchroithner,2014-02-22 As corroborated by the never-sagging and even increasing interest within the last decade, the intuitive attraction of True 3D in geodata presentation is well worth covering its current status and recent developments in a compendium like the present one. It covers most aspects of (auto-) stereoscopic representation techniques of both topographic and thematic geodata, be they haptic or not. Theory is treated as well as are many fields of concrete applications. Displays for big audiences and special single-user applications are presented, well-established technologies like classical manual fabrication of landscape reliefs contrast with cutting-edge developments
