*Archaeology, Anthropology, and Interstellar Communication* National Aeronautics Administration, Douglas Vakoch, 2014-09-06 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

A discussion of astrodynamics leads to a look at experimental facilities and instrumentation for space experiments and, ultimately, astrobiology missions, backed in each case by the latest research results from this fascinating field. Includes a CD-ROM with additional course material.

**Environmental Isotopes in Biodegradation and Bioremediation** C. Marjorie Aelion, Patrick Höhener, Daniel Hunkeler, Ramon Aravena, 2009-11-04 Enhanced analytical capabilities and separation techniques, improved detection limits, and accessibility of instrumentation have led to massive strides in the use of isotopes to assess microbial processes in surface and subsurface sediments. Considering the rapid growth of research and commercial interest in stable isotope and radioisotope applications for contaminant hydrology and microbial ecology, an up-to-date overview of the field is long overdue. *Environmental Isotopes in Biodegradation and Bioremediation* comprehensively covers established and emerging isotope methods for environmental applications, focusing on biodegradation and bioremediation. This book is an invaluable tool for researchers, practitioners, and regulators who require an extensive understanding of the application of isotope methods to natural compounds and environmental contaminants. It addresses questions including: What amount of a compound comes from anthropogenic release? Do the chemicals involved undergo degradation in the environment? Do they persist and accumulate? This book is divided into four sections: *Isotope Fundamentals* covers important background and theoretical information needed to understand later chapters *Isotopes and Microbial Processes* discusses the application of isotopes to different environmental redox conditions that dictate the predominant microbial processes that will occur *Isotopes in Field Applications* describes the transformation of anthropogenic pollutants and the application of isotope tools to field sites *Isotope Emerging Areas* addresses the use of compounds labeled with stable isotopes, including stable isotope probing and the use of radiocarbon at natural abundance and novel stable isotopes This reference details how isotope tools can be used to gain insight into the origin and fate of natural compounds and contaminants in the environment. Integrating theoretical and practical knowledge, the authors

examine the principles of isotope tools and then present an extensive overview of key environmental processes that can be investigated with isotope methods. They also discuss analytical and data evaluation procedures, addressing established and emerging applications. To illustrate concepts and methodology, the authors use a wide range of case studies and recent field and laboratory research from various disciplines currently employing these methods. This book is a valuable tool for expanding the application of both stable isotopes and radioisotopes into untapped areas.

Women in Mongol Iran Bruno De Nicola, 2017-03-08 This book shows the development of women's status in the Mongol Empire from its original homeland in Mongolia up to the end of the Ilkhanate of Iran in 1335. Taking a thematic approach, the chapters show a coherent progression of this development and contextualise the evolution of the role of women in medieval Mongol society. The arrangement serves as a starting point from where to draw comparison with the status of Mongol women in the later period. Exploring patterns of continuity and transformation in the status of these women in different periods of the Mongol Empire as it expanded westwards into the Islamic world, the book offers a view on the transformation of a nomadic-shamanist society from its original homeland in Mongolia to its settlement in the mostly sedentary-Muslim Iran in the mid-13th century.
