**Liberty's Crusade** Jeff Grubb, 2001-04-13 Far in the future, 60,000 light-years from Earth, a loose confederacy of Terran exiles is locked in battle with the enigmatic Protoss and the ruthless Zerg Swarm. Each species struggles to ensure its own survival among the stars in a war that will herald the beginning of mankind's greatest chapter -- or foretell its violent, bloody end. Danny Liberty was a good reporter...too good. When his investigations struck too close to the heart of the corrupt Terran Confederacy, he faced a simple choice: continue his current series of exposés, or take a hazardous new assignment covering the Marines on the front lines of the Koprulu Sector. It didn't take him long to decide.... Behind the attacks of the Zerg and the Protoss lies the story of a lifetime, but every piece of information blurs the mystery further. Thrown into the middle of a war where the outcome will determine mankind's very survival, the only thing that Danny Liberty knows for sure is that the only person he can trust to keep him alive is himself. Liberty's Crusade The first in an epic new series of space warfare novels set in the world of the bestselling computer game!

Organometallic Polymers Charles E. Jr. Carraher, 2012-12-02 Organometallic Polymers focuses on the synthesis, characterization, and potential applications of organometallic polymers. The discussion is organized around seven themes: vinyl polymerization of organometallic monomers; condensation polymerization of organometallic monomers; polymer-bound catalysts; applications of organotin polymers; developments in organosilicon polymers; phosphonitrile and sulfur nitride polymers; and coordination polymers. This book is comprised of 33 chapters and begins with a general review of polymerized vinyl monomers containing transition metals, as well as the reactivity of such monomers in addition to homo- and copolymerizations. The following chapters explore the participation of the ferrocene nucleus in the polymerization of vinylferrocene and its effect on polymer properties; thermomechanical transitions of ferrocene-containing polymers; photocrosslinkable organometallic polyesters; and supported catalysts for ethylene polymerization. The remaining sections discuss antifouling applications of various tin-containing organometallic polymers; structure and applications of polyphosphazenes and polymeric sulfur nitride; and coordination of inorganic ions to polymers. This monograph will be a useful resource for organic chemists and research workers in the field.
