Shadow of the Xel'naga Gabriel Mesta, 2002-01-19 Far in the future, 60,000 light-years from Earth, a loose confederacy of Terran exiles are locked in battle with the enigmatic Protoss and the ruthless Zerg Swarm. Each species struggles to ensure its own survival among the stars in a war that will herald the beginning of mankind's greatest chapter -- or foretell its violent, bloody end. It is a veritable wasteland -- one speck of dust among many in the vast, dark sea of space. But when the most violent storm in recent memory unearths an unfathomable alien artifact, Bhekar Ro becomes the greatest prize in the Terran Sector -- the Holy Grail of the Zerg, the Protoss, and Humanity alike -- as forces from the three great powers converge to claim the lost secrets of the most powerful species the universe has ever known. shadow of the xel'naga An original tale of space warfare novels set in the world of the bestselling computer game!

With a Little Help Cory Doctorow, 2015-07-16 With a Little Help is my first serious experiment in self-publishing. I've published many novels, short story collections, books of essays and so on with publishers, and it's all been very good and satisfying and educational and so on, but it seems like it's time to try something new. With a Little Help consists of 12 stories, all reprints except for Epoch (commissioned by Mark Shuttleworth).

Applications of Evolutionary Computation Cecilia Di Chio, Stefano Cagnoni, Carlos Cotta, Marc Ebner, Aniko Ekart, Anna I. Esparcia-Alcázar, Chi-Keong Goh, Juan J. Merelo, Ferrante Neri, Mike Preuss, Julian Togelius, Georgios N. Yannakakis, 2010-04-03 Evolutionary Computation (EC) techniques are efficient, nature-inspired methods based on the principles of natural evolution and genetics. Due to their efficiency and simple underlying principles, these methods can be used for a diverse range of activities including problem solving, optimization, machine learning and pattern recognition. A large and continuously increasing number of researchers and professionals make use of EC techniques in various application domains. This volume presents a careful selection of relevant EC examples combined with a thorough examination of the techniques used in EC. The papers in the volume illustrate the current state of the art in the application of EC and should help and inspire researchers and professionals to develop efficient EC methods for design and problem solving. All papers in this book were presented during EvoApplications 2010, which included a range of events on application-oriented aspects of EC. Since 1998, EvoApplications — formerly known as EvoWorkshops — has provided a unique opportunity for EC researchers to meet and discuss application aspects of EC and has been an important link between EC research and its application in a variety of domains. During these 12 years, new events have arisen, some have disappeared, while others have matured to become conferences of their own, such as EuroGP in 2000, EvoCOP in 2004, and EvoBIO in 2007. And from this year, EvoApplications has become a conference as well.

Adaptation in Natural and Artificial Systems John H. Holland, 1992-04-29 Genetic algorithms are playing an increasingly important role in studies of complex adaptive systems, ranging from adaptive agents in economic theory to the use of machine learning techniques in the design of complex devices such as aircraft turbines and integrated circuits. *Adaptation in Natural and Artificial Systems* is the book that initiated this field of study, presenting the theoretical foundations and exploring applications. In its most familiar form, adaptation is a biological process, whereby organisms evolve by rearranging genetic material to survive in environments confronting them. In this now classic work, Holland presents a mathematical model that allows for the nonlinearity of such complex interactions. He demonstrates the model's universality by applying it to economics, physiological psychology, game theory, and artificial intelligence and then outlines the

way in which this approach modifies the traditional views of mathematical genetics. Initially applying his concepts to simply defined artificial systems with limited numbers of parameters, Holland goes on to explore their use in the study of a wide range of complex, naturally occurring processes, concentrating on systems having multiple factors that interact in nonlinear ways. Along the way he accounts for major effects of coadaptation and coevolution: the emergence of building blocks, or schemata, that are recombined and passed on to succeeding generations to provide, innovations and improvements.

Autonomous Control for a Reliable Internet of Services Ivan Ganchev, R. D. van der Mei, Hans van den Berg, 2018-05-30 This open access book was prepared as a Final Publication of the COST Action IC1304 "Autonomous Control for a Reliable Internet of Services (ACROSS)". The book contains 14 chapters and constitutes a show-case of the main outcome of the Action in line with its scientific goals. It will serve as a valuable reference for undergraduate and post-graduate students, educators, faculty members, researchers, engineers, and research strategists working in this field. The explosive growth of the Internet has fundamentally changed the global society. The emergence of concepts like SOA, SaaS, PaaS, IaaS, NaaS, and Cloud Computing in general has catalyzed the migration from the information-oriented Internet into an Internet of Services (IoS). This has opened up virtually unbounded possibilities for the creation of new and innovative services that facilitate business processes and improve the quality of life. However, this also calls for new approaches to ensuring the quality and reliability of these services. The objective of this book is, by applying a systematic approach, to assess the state-of-the-art and consolidate the main research results achieved in this area.

Designing EEG Experiments for Studying the Brain Aamir Saeed Malik, Hafeez Ullah Amin, 2017-05-25 Designing EEG Experiments for Studying the Brain: Design Code and Example Datasets details the design of various brain experiments using electroencephalogram (EEG). Providing guidelines for designing an EEG experiment, it is primarily for researchers who want to venture into this field by designing their own experiments as well as those who are excited about neuroscience and want to explore various applications related to the brain. The first chapter describes how to design an EEG experiment and details the various parameters that should be considered for success, while remaining chapters provide experiment design for a number of neurological applications, both clinical and behavioral. As each chapter is accompanied with experiment design codes and example datasets, those interested can quickly design their own experiments or use the current design for their own purposes. Helpful appendices provide various forms for one's experiment including recruitment forms, feedback forms, ethics forms, and recommendations for related hardware equipment and software for data acquisition, processing, and analysis. Written to assist neuroscientists in experiment designs using EEG Presents a step-by-step approach to designing both clinical and behavioral EEG experiments Includes experiment design codes and example datasets Provides inclusion and exclusion criteria to help correctly identify experiment subjects and the minimum number of samples Includes appendices that provide recruitment forms, ethics forms, and various subjective tests associated with each of the chapters

The Revolt of the Cockroach People Oscar Zeta Acosta, 2013-02-06 The further adventures of Dr. Gonzo as he defends the cucarachas -- the Chicanos of East Los Angeles. Before his mysterious disappearance and probable death in 1971, Oscar Zeta Acosta was famous as a Robin Hood Chicano lawyer and notorious as the real-life model for Hunter S. Thompson's Dr. Gonzo a fat, pugnacious attorney with a gargantuan appetite for food, drugs, and life on the edge. In this exhilarating sequel to *The Autobiography of a Brown Buffalo*, Acosta takes us behind the front lines of the militant Chicano movement of the late sixties and early seventies, a movement he served both in the courtroom and on the barricades. Here are the brazen games of chicken Acosta played against the Anglo legal establishment; battles fought with bombs as well as writs; and a reluctant hero who faces danger not only from the police but from the vatos locos he champions. What emerges is at once an important political document of a genuine popular uprising and a revealing, hilarious, and moving personal saga.

An Encyclopedia of Swearing Geoffrey Hughes, 2015-03-26 This is the only encyclopedia and social history of swearing and foul language in the English-speaking world. It covers the various social dynamics that generate swearing, foul language, and insults in the entire range of the English language. While the emphasis is on American and

British English, the different major global varieties, such as Australian, Canadian, South African, and Caribbean English are also covered. A-Z entries cover the full range of swearing and foul language in English, including fascinating details on the history and origins of each term and the social context in which it found expression. Categories include blasphemy, obscenity, profanity, the categorization of women and races, and modal varieties, such as the ritual insults of Renaissance flyting and modern sounding or playing the dozens. Entries cover the historical dimension of the language, from Anglo-Saxon heroic oaths and the surprising power of medieval profanity, to the strict censorship of the Renaissance and the vibrant, modern language of the streets. Social factors, such as stereotyping, xenophobia, and the dynamics of ethnic slurs, as well as age and gender differences in swearing are also addressed, along with the major taboo words and the complex and changing nature of religious, sexual, and racial taboos.

Organometallic Polymers Charles E. Jr. Carraher, 2012-12-02 *Organometallic Polymers* focuses on the synthesis, characterization, and potential applications of organometallic polymers. The discussion is organized around seven themes: vinyl polymerization of organometallic monomers; condensation polymerization of organometallic monomers; polymer-bound catalysts; applications of organotin polymers; developments in organosilicon polymers; phosphonitrile and sulfur nitride polymers; and coordination polymers. This book is comprised of 33 chapters and begins with a general review of polymerized vinyl monomers containing transition metals, as well as the reactivity of such monomers in addition to homo- and copolymerizations. The following chapters explore the participation of the ferrocene nucleus in the polymerization of vinylferrocene and its effect on polymer properties; thermomechanical transitions of ferrocene-containing polymers; photocrosslinkable organometallic polyesters; and supported catalysts for ethylene polymerization. The remaining sections discuss antifouling applications of various tin-containing organometallic polymers; structure and applications of polyphosphazenes and polymeric sulfur nitride; and coordination of inorganic ions to polymers. Sexual Identities and the Media Wendy Hilton-Morrow, Kathleen Battles, 2015-03-05 *Sexual Identities and the Media* encourages students to examine media as a site of negotiation for how people make sense of their own and others' sexual identities. Taking a critical/cultural approach, Wendy Hilton-Morrow and Kathleen Battles weave together theory, synthesis of existing research, and original analysis of contemporary media examples in order to explore key areas of debate, including: an historical context for contemporary GLBTQ representations; the advantages and limitations of media visibility, including a discussion of the strengths and limitations of stereotype research and the quest for positive representations; the role of consumer culture in constructing GLBTQ identities; strategies of mainstream media resistance by GLBTQ community members, including oppositional/queer reading strategies and the production of media products by and for the GLBTQ community; the complexities of comedy as a popular narrative device in GLBTQ portrayals; the closet as a structuring metaphor in both GLBTQ identities and engagement with media; media representations of GLBTQ bodies as sites of non-normative desires and gender identities. Featuring an enormous range of discussion questions and case studies—from celebrity coming-out narratives, transgender models, and slash fiction writers to *Glee* and *Modern Family*—this textbook offers a timely, informative, and demystifying introduction to this vital intersection in contemporary culture.

Rebooting AI Gary Marcus, Ernest Davis, 2019-09-10 Two leaders in the field offer a

compelling analysis of the current state of the art and reveal the steps we must take to achieve a truly robust artificial intelligence. Despite the hype surrounding AI, creating an intelligence that rivals or exceeds human levels is far more complicated than we have been led to believe. Professors Gary Marcus and Ernest Davis have spent their careers at the forefront of AI research and have witnessed some of the greatest milestones in the field, but they argue that a computer beating a human in Jeopardy! does not signal that we are on the doorstep of fully autonomous cars or superintelligent machines. The achievements in the field thus far have occurred in closed systems with fixed sets of rules, and these approaches are too narrow to achieve genuine intelligence. The real world, in contrast, is wildly complex and open-ended. How can we bridge this gap? What will the consequences be when we do? Taking inspiration from the human mind, Marcus and Davis explain what we need to advance AI to the next level, and suggest that if we are wise along the way, we won't need to worry about a future of machine overlords. If we focus on endowing machines with common sense and deep understanding, rather than simply focusing on statistical analysis and gathering ever larger collections of data, we will be able to create an AI we can trust—in our homes, our cars, and our doctors' offices. Rebooting AI provides a lucid, clear-eyed assessment of the current science and offers an inspiring vision of how a new generation of AI can make our lives better.
