Yefim Gordon

Sukhoi Su-27 Flanker E. Gordon, Yefim Gordon, 1999 The Su-27 entered service with the Russian Air Force in the mid-1980s. This comprehensive history is based on documents supplied from Sukhoi, interviews with design and engineering employees of the company, and all available information that has been published on this deadly aircraft. Contains development history, operational service history, technical details, and explanations of each model in the range. Technical drawings, photos, and text combine to make this the ultimate Sukhoi Su-27 reference.

Sukhoi Su-27 & 30/33/34/35: Famous Russian Aircraft Yefim Gordon, Dmitriy Komissarov, 2018-10 The Sukhoi Design Bureau was tasked in 1969 with developing a fourth-generation heavy fighter and thus began the story of the Su-27, known to the western world as the Flanker--an aircraft which turned out to be one of the most successful Soviet fighter designs. This book tells the story of how the original project developed, how the final configuration of what was known as the T-10 was selected and why the brave decision to scrap the original project and rework it as the T-10S was taken, a decision that proved to be justified. The book covers the design and testing of the prototypes in both

configurations, the production entry of the basic Su-27 single-seat fighter and the Su-27UB two-seat combat trainer together with the efforts of Sukhoi to keep them up to date with mid-life upgrades to Generation 4++' (Su-35S) level. The operational histories of Su-27 versions including the Su-30/Su-34/Su-35 are also described.

When the Soviet Navy decided to bolster its fleet with carriers optimized for conventional take-off and landing (CTOL) aircraft, Sukhoi responded by developing the Su-27K, which later entered service as the Su-33, Russia's first operational CTOL shipboard fighter. These naval variants are included in the book as is a chapter describing the story of how China purchased license manufacturing rights for the Su-27 and went on to develop its own versions with indigenous avionics and weapons, including the basic J-11 fighter and the J-15 Flying Shark--a clone of the Su-33. The post-Soviet republics included, the Su-27/Su-30/Su-34/Su-35 family has seen service with nearly 20 nations, including places as far apart as Vietnam, Malaysia, Ethiopia, Indonesia, Angola, India and Venezuela. The book describes in depth the development and operational career of the Su-27 family, including mid-life upgrades and the latest variants, and features detailed fleet lists. Richly illustrated with color photographs, line drawings and color profiles

of the various color schemes carried by the type, this is the definitive work on a truly outstanding aircraft.

The Sukhoi Su-27/Su-33 Stanislaw Krzysztof

Mokwa,2019-12-27 In the late 1960s Soviet Union started working on fighters that would be a counterbalance for the American F-15 Eagle. In 1969, a competition for a new fighter was announced, but when the parameters to be met were given, Pavel Sukhoi withdrew from it. He considered that the required performance could not be reached. Despite this, the designers from his office - Oleg Samojtowicz, Valery Nikolaenko and Vladimir Antonov - developed the plane and presented it for the competition as T-10 prototype. The aircraft was constructed as a heavy interceptor fighter (light version was the MiG-29, which was submitted in the same competition).

Sukhoi Su-27 Hans-Heiri Stapfer,2007 The Soviet answer to the F-15 Eagle and response to the trend in US fighters design toward improved maneuverability. A supersonic all-weather counter-air fighter, the Su-27 is equipped with a look-down/shoot-down weapons system and beyond-visual-range air-to-air missiles. Its range, thrust-to-weight ratio and maneuverability are all significant improvements over earlier Soviet fighters; one of the

world's foremost combat aircraft and a potent adversary. Over 200 color and b/w photos, line drawings and 10 color profiles; 80 pages.

Su-27 Sukhoi Superfighter Flanker Jon Lake, 1992 Part of Osprey's highly illustrated Aero Colour Series, this book looks at the illustrious Tiger Squadrons of the past.

Sukhoi Su-27 Yefim Gordon, 2007 In the late 1960s, the Soviet Union became aware that the U.S. was developing a new generation of jet fighters that had an exceptional range, heavy armor, and great agility in the air. These U.S. aircraft, the F-14 Tomcat, F-15 Eagle, F-16 Fighting Hornet, and F/A-18 Hornet dominated U.S. air power for three decades. In the context of the Cold War, the Soviets could not be seen to be lagging behind the Americans. Their response to these new U.S. aircraft was the Sukhoi Su-27 Flanker, which was designed as a long-range air superiority aircraft and interceptor. The first of the modified pre-production aircraft appeared in 1981, but it was not until 1984 that significant numbers of the Su-27 started to enter service. Eventually some 680 Su-27 were built for the Soviets, of which 400 remain in service with the Russian Tactical Air Force today. Outside of Russia, the Su-27 is also in service with the Chinese,

and on the inventories of the air forces of Vietnam, Malaysia, Ethiopia, Indonesia, Syria, and Angola. This book describes in depth the development, operational career, history, and variants within the Su-27 family. The book incorporates color and black and white photos to portray some of the various camouflage schemes carried by the type in Soviet, Russian, and other air forces over the past two decades.

Sukhoi Su-27 Flanker Dennis R. Jenkins, Jay Miller, 1991

Sukhoi Su-27sm(3)/SKM Hugh Harkins, 2016-06-17 Sukhoi Su-27SM(3)/SKM - The purpose of this volume is to detail the Sukhoi Su-27SM(3)/SKM family of 4th+ generation multirole combat aircraft which emanated from an upgrade program for serial production Su-27S 4th generation air superiority fighter aircraft and a new build program for Su-27SKM and Su-27SM3 aircraft for the export and domestic markets respectively. The volume covers the evolution of the first generation Su-27 air superiority fighter, which was born out of the T-10 development program of the 1970's, leading to the 21st century Su-27SM(3)/SKM multirole combat aircraft through the anomaly that was the Su-30KI development of the late 1990's. No attempt is made to detail the plethora of developments that evolved from the

Su-27 such as the two-seat Su-30 families, attention being fixed on the further development of the single-seat Su-27S into the Su-27SM(3)/SKM variants. All technical information regarding the aircraft, systems and weapons have been provided by the respective developers/manufacturers, as have many of the photographs and graphics. Certain elements of text, when pertinent, are taken from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi Su-30MKK/MK2/M2 - Russo Kitashiy Striker from Amur'.

Sukhoi Su-30 Mkk/Mk2/M2: Russo-Kitayshiy Striker from Amur Hugh Harkins, 2015-10-27 The Su-30MKK/MK2/M2 family of combat aircraft share the same numerical designation as the Su-30MK/MKI/SM family of multi-role combat aircraft which were clearly derived from the Su-30M, which was, itself, derived from the Su-27UB two-seat operational conversion variant of the Su-27S single-seat air superiority fighter. However, the numerical designation and some first glance looks aside, the Su-30MKK family is fundamentally a different design from the Su-30MKI family in terms of primary design role, internal systems and structure; certainly in regards to the latter the aircraft having more in common with the Su-27M (first generation Su-35) than the Su-27UB or

Su-30M. This volume covers the evolution of the Su-30 design from the Su-27, which was born out of the T-10 development program of the 1970's. The evolution of the Su-30M interceptor into the multi-role Su-30MK is described. The Su-30MCK is covered in detail, as are the improved Su-30MK2 for the export market and the Su-30M2 strike fighter developed for the Russian Federation Air Force. The aircraft and systems are described in detail, as are the weapons that can be employed by the respective variants. The enigma that is the Su-35UB is included as that aircraft, in regards to structure, has more in common with the Su-30MCK family than any other Su-27 family variant. All technical information regarding the aircraft, systems and weapons have been provided by the respective manufacturers, as have many of the photographs and diagrams. Elements of the first and fifth chapters borrow certain texts from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi T-50/PAK FA, Russia's 5th Generation 'Stealth' Fighter'.

Sukhoi Su-35s Flanker E Robert Pied,Nicolas

Deboeck,2021-08-31 The first close-up look at the newest version of the Flanker, recently taken into service by the Russian Air Force. Including spectacular, never before seen details such as cockpit,

thrust-vectoring engine exhausts and more.

Sukhoi Su-27 Hans Halberstadt,1992 The Sukhoi Su-27 is one of the world's greatest fighter-interceptor aircraft, designed to penetrate deep behind enemy defenses to destroy the all-important AWACS and airborne refueling aircraft that are the keys to Western air superiority. The Flanker is a thoroughly modern interceptor with advanced turbofan engines and fly-by-wire controls that give it unbelievable agility for its size. Since its debut at the 1989 Paris air show where it stunned the audience with an unprecedented maneuver dubbed the Pugachev Cobra, we have seen many beautiful photographs of the aircraft during demonstration flights and on the flight line, but what else do we know about this fascinating new Russian fighter? Little, until now. This book reveals every detail of the Su-27 and fighter operations at a Russian combat base. - Back cover.

Sukhoi Su-34 'Fullback': Russia's 21st Century Striker Hugh Harkins,2013-10-02 Su-34 The Su-34 'Fullback' was developed from the Su-27 'Flanker' interceptor/fighter as a fourth plus generation strike aircraft for service with the Russian Air Force. Conceived in the twilight years of the Soviet Union, the aircraft weathered the financial crisis that gripped post communist Russia

following the collapse of the Soviet Union in the early 1990's, maturing into an advanced strike aircraft, deliveries to the Russian Air Force commencing in late 2006. The aircraft is currently in service with increasing numbers being ordered to replace that countries aging fleet of Su-24M/M2 strike aircraft. It is also planned for the Su-34 to replace the Su-24MR in the tactical reconnaissance role. This volume covers the program from conception to operational service with chapters describing the aircraft, systems and weapons, production, flight testing and initial service. The text is complimented by black and white photographs

Su-27 Andrei Fomin,2000 Beretter om udviklingen og anvendelsen af det sovjetiske jager- og jagerbombefly, Su-27 Flanker, samt heraf udviklede varianter.

Sukhoi Su-27 Series Theodore Gianna,2023-09-20 Sukhoi Su-27 production began in 1982. The Su-27 project, however, started in 1969, when the United States declared intentions to construct a new fighter, the F-15 Eagle. The Soviet government wasted no time developing a response to counterbalance the latest American aircraft. The project was named the 'Promising Frontline Fighter Project'. Sukhoi was chosen as the project's winner, and the new frontline fighter was named the Su-27.After the Su-27

entered service with the Russian Air Force (VVS), the sky was the limit for Sukhoi and its family of fighters. The company churned out outstanding variants of the Su-27 series. The first variant is the Su-30 two-seat all-weather, air-to-air, and air interdiction missions multirole fighter. The Su-30, which evolved from the Su-27UB two-seat combat trainer, features updated avionics and can conduct ground attack missions. The following aircraft is the two-seat Su-32 fighter bomber. It was designed for round-the-clock, all-weather engagement of ground and surface targets at considerable distances from home bases. It also has precision-guided weapons to attack enemy aircraft in an intense counter-fire and ECM environment. The subsequent aircraft is the Su-33 all-weather carrier-based twin-engine air superiority fighter, designed primarily for use on the Russian 'Admiral Kuznetsov' heavy aviation cruiser. Next is the superb Su-34 multifunctional supersonic fighter bomber which is equipped with the 'Kinzhal' hypersonic missile system. Then comes the granddaddy of the series, the Su-35S 4++ generation multirole super-maneuverable fighter, arguably the most visually striking fighter aircraft on the market today, and is an exceedingly lethal adversary in a combat situation. It possesses extreme super maneuverability and is exceptionally agile and quick.

It could also strike targets on the ground. Lastly, there was the Su-37, the most maneuverable variant due to the 'Thrust Vector Control' (TVC) system, which allowed the aircraft to evade a stall scenario during low-speed situations when the control surfaces became ineffective. Using TVC, the aircraft could be controlled in these conditions by relying on engine thrust as opposed to airflow. The Su-37 project was terminated, and only one Su-37 was produced. Nonetheless, the Su-35s today continue to utilize TVC technology.

Sukhoi Su-27 Flanker Jon Lake, 1994 En beskrivelse af den avancerede Su-27 serie.

Su-27 Flanker Tom Basham, 1995 The first Windows 95 military flight simulation and a flight model with unprecedented accuracy, this game had Russia's top test pilot, Anatoly Kvochur, as a technical advisor to its development process. This book is sure to give the player a clear and concise knowledge of the SU-27 Flanker.

Flying beyond the stall Douglas A. Joyce, 2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed,

manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's

VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Flankers Yefim Gordon, 2001 The development of Russian military aviation did not end with the collapse of Communism. The Su-27 has seen considerable upgrading in recent years. In effect, all versions of the Su-27 Flanker from the Su-27M onwards can be regarded as a new generation of combat aircraft -- by Russian standards. The book describes how the Sukhoi Company strives to make the most of a good design, adapting it to today's changing requirements by integrating new weapons and state-of-the-art avionics.

Visual Aircraft Recognition U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it

is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

Russia's Air Power at the Crossroads Benjamin S.

Lambeth, 1996 This report assesses trends and prospects in Russian military aviation, drawing on the extensive reportage on air power in the Russian defense literature since the onset of glasnost in 1986.
