**Sukhoi Su-35s Flanker E** Robert Pied,Nicolas Deboeck,2021-08-31 The first close-up look at the newest version of the Flanker, recently taken into service by the Russian Air Force. Including spectacular, never before seen details such as cockpit, thrust-vectoring engine exhausts and more.

**Sukhoi Su-30 Mkk/Mk2/M2: Russo-Kitayshiy Striker from Amur** Hugh Harkins,2015-10-27 The Su-30MKK/MK2/M2 family of combat aircraft share the same numerical designation as the Su-30MK/MKI/SM family of multi-role combat aircraft which were clearly derived from the Su-30M, which was, itself, derived from the Su-27UB two-seat operational conversion variant of the Su-27S single-seat air superiority fighter. However, the numerical designation and some first glance looks aside, the Su-30MKK family is fundamentally a different design from the Su-30MKI family in terms of primary design role, internal systems and structure; certainly in regards to the latter the aircraft having more in common with the Su-27M (first generation Su-35) than the Su-27UB or Su-30M. This volume covers the evolution of the Su-30 design from the Su-27, which was born out of the T-10 development program of the 1970's. The evolution of the Su-30M interceptor into the multi-role Su-30MK is described. The Su-30MKK is covered in detail, as are the improved Su-30MK2 for the export market and the Su-30M2 strike fighter developed for the Russian Federation Air Force. The aircraft and systems are described in detail, as are the weapons that can be employed by the respective variants. The enigma that is the Su-35UB is included as that aircraft, in regards to structure, has more in common with the Su-30MKK family than any other Su-27 family variant. All technical information regarding the aircraft, systems and weapons have been provided by the respective manufacturers, as have many of the photographs and diagrams. Elements of the first and fifth chapters borrow certain texts from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi T-50/PAK FA, Russia's 5th Generation 'Stealth' Fighter'.

**Sukhoi Su-27sm(3)/SKM** Hugh Harkins,2016-06-17 Sukhoi Su-27SM(3)/SKM - The purpose of this volume is to detail the Sukhoi Su-27SM(3)/SKM family of 4th+ generation multirole combat aircraft which emanated from an upgrade program for serial production Su-27S 4th generation air superiority fighter aircraft and a new build program for Su-27SKM and Su-27SM3 aircraft for the export and domestic markets respectively. The volume covers the evolution of the first generation Su-27 air superiority fighter, which was born out of the T-10 development program of the 1970's, leading to the 21st century Su-27SM(3)/SKM multirole combat aircraft through the anomaly that was the Su-30KI development of the late 1990's. No attempt is made to detail the plethora of developments that evolved from the Su-27 such as the two-seat Su-30 families, attention being fixed on the further development of the single-seat Su-27S into the Su-27SM(3)/SKM variants. All technical information regarding the aircraft, systems and weapons have been provided by the respective developers/manufacturers, as have many of the photographs and graphics. Certain elements of text, when pertinent, are taken from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi Su-30MKK/MK2/M2 - Russo Kitashiy Striker from Amur'.

Sukhoi Su-15 Yefim Gordon,Dmitriy Komissarov,2015-04-30 A history of this supersonic Soviet interceptor, including useful information for model makers. In the late 1950s, the Sukhoi Design Bureau, already an established fighter maker, started work on a successor to its Su-9 and Su-11 single-engined interceptors for the national Air Defense Force. Similar to its predecessors, the new aircraft, designated Su-15, had delta wings; unlike the Su-9/Su-11, however, it had twin engines and lateral air intakes freeing up the nose for a powerful fire control radar. First flown in May 1962, the Su-15 officially entered service in 1965 and was built in several versions, the late ones having cranked-delta wings and a more capable radar. Being an air defense fighter, the Su-15 frequently had to deal with intruders. Unfortunately the aircraft gained notoriety in two separate incidents involving shoot-downs of Boeing airliners (a 707 in 1978 and a 747 in 1983), both of which were South Korean and had intruded into Soviet airspace on what were very probably clandestine spy missions. This book describes the developmental and service history of the Sukhoi Su-15, and contains a comprehensive survey of all model-making kits currently available on the market.

**Sukhoi Su-27 Flanker** E. Gordon,Yefim Gordon,1999 The Su-27 entered service with the Russian Air Force in the mid-1980s. This comprehensive history is based on documents supplied from Sukhoi, interviews with design and engineering employees of the company, and all available information that has been published on this deadly aircraft. Contains development history, operational service history, technical details, and explanations of each model in the range. Technical drawings, photos, and text combine to make this the ultimate Sukhoi Su-27 reference.

**Sukhoi Su-27 & 30/33/34/35: Famous Russian Aircraft** Yefim Gordon,Dmitriy Komissarov,2018-10 The Sukhoi Design Bureau was tasked in 1969 with developing a fourth-generation heavy fighter and thus began the story of the Su-27, known to the western world as the Flanker--an aircraft which turned out to be one of the most successful Soviet fighter designs. This book tells the story of how the original project developed, how the final configuration of what was known as the T-10 was selected and why the brave decision to scrap the original project and rework it as the T-10S was taken, a decision that proved to be justified. The book covers the design and testing of the prototypes in both configurations, the production entry of the basic Su-27 single-seat fighter and the Su-27UB two-seat combat trainer together with the efforts of Sukhoi to keep them up to date with mid-life upgrades to Generation 4++' (Su-35S) level. The operational histories of Su-27 versions including the Su-30/Su-34/Su-35 are also described. When the Soviet Navy decided to bolster its fleet with carriers optimized for conventional take-off and landing (CTOL) aircraft, Sukhoi responded by developing the Su-27K, which later entered service as the Su-33, Russia's first operational CTOL shipboard fighter. These naval variants are included in the book as is a chapter describing the story of how China purchased license manufacturing rights for the Su-27 and went on to develop its own versions with indigenous avionics and weapons, including the basic J-11 fighter and the J-15 Flying Shark--a clone of the Su-33. The post-Soviet republics included, the Su-27/Su-30/Su-34/Su-35 family has seen service with nearly 20 nations, including places as far apart as Vietnam, Malaysia, Ethiopia, Indonesia, Angola, India and Venezuela. The book describes in depth the development and operational career of the Su-27

family, including mid-life upgrades and the latest variants, and features detailed fleet lists. Richly illustrated with color photographs, line drawings and color profiles of the various color schemes carried by the type, this is the definitive work on a truly outstanding aircraft.

Sukhoi Su-27 Yefim Gordon, 2007 In the late 1960s, the Soviet Union became aware that the U.S. was developing a new generation of jet fighters that had an exceptional range, heavy armor, and great agility in the air. These U.S. aircraft, the F-14 Tomcat, F-15 Eagle, F-16 Fighting Hornet, and F/A-18 Hornet dominated U.S. air power for three decades. In the context of the Cold War, the Soviets could not be seen to be lagging behind the Americans. Their response to these new U.S. aircraft was the Sukhoi Su-27 Flanker, which was designed as a long-range air superiority aircraft and interceptor. The first of the modified pre-production aircraft appeared in 1981, but it was not until 1984 that significant numbers of the Su-27 started to enter service. Eventually some 680 Su-27 were built for the Soviets, of which 400 remain in service with the Russian Tactical Air Force today. Outside of Russia, the Su-27 is also in service with the Chinese, and on the inventories of the air forces of Vietnam, Malaysia, Ethiopia, Indonesia, Syria, and Angola. This book describes in depth the development, operational career, history, and variants within the Su-27 family. The book incorporates color and black and white photos to portray some of the various camouflage schemes carried by the type in Soviet, Russian, and other air forces over the past two decades.

Sukhoi Su-27 Hans-Heiri Stapfer, 2007 The Soviet answer to the F-15 Eagle and response to the trend in US fighters design toward improved maneuverability. A supersonic all-weather counter-air fighter, the Su-27 is equipped with a look-down/shoot-down weapons system and beyond-visual-range air-to-air missiles. Its range, thrust-to-weight ratio and maneuverability are all significant improvements over earlier Soviet fighters; one of the world's foremost combat aircraft and a potent adversary. Over 200 color and b/w photos, line drawings and 10 color profiles; 80 pages.

**Su-34: Russia's 4th+ Generation Strike Fighter** Hugh Harkins, 2019-10-18 Su-34 The Sukhoi Su-34 'Fullback' strike fighter was developed from the Sukhoi Su-27 'Flanker' air superiority fighter as a 4th+ generation strike aircraft for service with the VKS - Russian Federation Air Force - from the second decade of the twenty first century. The Su-34 was designed to replace the Russian Federations aging fleet of Sukhoi Su-24M/2 variable-geometry strike aircraft and possibly the Su-24MR in the tactical reconnaissance role. Conceived under the T-10V program in the twilight years of the Soviet Union - Union of Soviet Socialist Republics - the design weathered the financial crisis that gripped Russia following the break-up of that union on 25 December 1991. The T-10V matured into an advanced strike aircraft, deliveries to the Russian Federation Air Force commencing in second half of the first decade of the twenty first century. This volume covers the program from conception to operational service with chapters describing the aircraft design, development, production, systems, weapons complexes and strike operations flown by the Russian Aerospace Group supporting the Syrian Arab Republic in the civil war that gripped that nation in the 2010's.

**Sukhoi Su-27** Hans Halberstadt,1992 The Sukhoi Su-27 is one of the world's greatest fighter-interceptor aircraft, designed to penetrate deep behind enemy defenses to destroy the all-important AWACS and airborne refueling aircraft that are the keys to Western air superiority. The Flanker is a thoroughly modern interceptor with advanced turbofan engines and fly-by-wire controls that give it unbelievable agility for its size. Since its debut at the 1989 Paris air show where it stunned the audience with an unprecedented maneuver dubbed the Pugachev Cobra, we have seen many beautiful photographs of the aircraft during demonstration flights and on the flight line, but what else do we know about this fascinating new Russian fighter? Little, until now. This book reveals every detail of the Su-27 and fighter operations at a Russian combat base. - Back cover.

Polish Wings Dariusz Karnas,2009-08-31 The Polish Air Force was a major user of Sukhoi's heavyweight fighter-bombers for more than 30 years. Starting with delivery of the Su-7BM in 1964, with the -BKL variant following from 1966 and eight 2-seat Su-7Us from 1969, the Poles then operated the swing-wing Su-20 from 1974 to 1997. This new volume in the Polish Wings series describes and illustrates all these Polish Sukhois, with full details of all the airframes and their fates, detailed description of color schemes and markings, as well as many color photos and color profiles. This book is an invaluable reference source for aircraft historians and enthusiasts, and scale modelers.

Flying beyond the stall Douglas A. Joyce,2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. Flying Beyond the Stall begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Technology and Nationalism Marco Adria,2010-01-28 Revisiting Marshall McLuhan's work on the ways that technologies influence societies, Adria reconsiders the effects technologies have had on Canadian regionalism and nationalism. Offering key insights into media history, the author outlines the influence that newspapers, radio,

and television have had in forming a mindset ready to welcome the internet age. As the digital revolution continues to shape the world into a global village, Technology and Nationalism provides a detailed and overdue reflection on the influence of technology on the social and political bonds we form and inhabit.

Russia's Military Modernisation: An Assessment The International Institute for Strategic Studies (IISS), 2020-09-29 This new IISS Strategic Dossier examines the recent development of Moscow's armed forces and military capabilities. It analyses the aspirations underpinning Russia's military reform programme and its successes as well as its failures. The book also provides insights into Russia's operational use of its armed forces, including in the intervention in Syria, the goals and results of recent state armament programmes, and the trajectory of future developments. This full-colour volume includes more than 50 graphics, maps and charts and over 70 images, and contains chapters on: Russia's armed forces since the end of the Cold War Strategic forces Ground forces Naval forces Aerospace forces Russia's approach to military decision-making and joint operations Economics and industry At a time when Russia's relations with many of its neighbours are increasingly strained, and amid renewed concern about the risk of an armed clash, this dossier is essential reading for understanding the state, capabilities and future of Russia's armed forces.

*Viper Force* , 2011-06-24 The pilot of the F-16 Viper, which is the U.S. Air Force's frontline fighter and attack aircraft, is at the pinnacle of combat aviation. Viper Force tells the story of what it takes to become an F-16 pilot and what it's like to fly and fight the Viper in combat. Because the F-16 is a dual-purpose combat aircraft, its pilot must master two widely divergent disciplines: air-to-air flying against enemy fighters to maintain control of the air over the battle field and air-to-ground flying in support of ground forces, soldiers, and marines, in contact. The crucible for creation of the Viper pilot is the air force's 56th Fighter Wing, the successor to World War II's 56th Fighter Group, the legendary Zemke's Wolfpack, which also flew a fighter/attack aircraft, the P-47 Thunderbolt. Viper Force also provides an up-close and personal look at the F-16 Viper squadron at war with information on its missions, command and control in the air, and the crucially important but often overlooked maintenance and ordnance ground crew.

**Shaking the Heavens and Splitting the Earth** Roger Cliff, 2011 Less than a decade ago, China's air force was an antiquated service equipped almost exclusively with weapons based on 1950s-era Soviet designs and operated by

personnel with questionable training according to outdated employment concepts. Today, the People's Liberation Army Air Force (PLAAF) appears to be on its way to becoming a modern, highly capable air force for the 21st century. This monograph analyzes publications of the Chinese military, previously published Western analyses of China's air force, and information available in published sources about current and future capabilities of the PLAAF. It describes the concepts for employing forces that the PLAAF is likely to implement in the future, analyzes how those concepts might be realized in a conflict over Taiwan, assesses the implications of China implementing these concepts, and provides recommendations about actions that should be taken in response.

**Russia's Air Power at the Crossroads** Benjamin S. Lambeth, 1996 This report assesses trends and prospects in Russian military aviation, drawing on the extensive reportage on air power in the Russian defense literature since the onset of glasnost in 1986.
