World War Z Max Brooks,2013 An account of the decade-long conflict between humankind and hordes of the predatory undead is told from the perspective of dozens of survivors who describe in their own words the epic human battle for survival, in a novel that is the basis for the June 2013 film starring Brad Pitt. Reissue. Movie Tie-In.

**A New Direction for China's Defense Industry** Evan S. Medeiros,Roger Cliff,Keith Crane,James C. Mulvenon,2005-12-19 Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

Frontier Encounters Franck Billé,Grégory Delaplace,Caroline Humphrey,2012-08-01 China and Russia are rising economic and political powers that share thousands of miles of border. Despite their proximity, their interactions with each other - and with their third neighbour Mongolia - are rarely discussed. Although the three countries share a boundary, their traditions, languages and worldviews are remarkably different. Frontier Encounters presents a wide range of views on how the borders between these unique countries are enacted, produced, and crossed. It sheds light on global uncertainties: China's search for energy resources and the employment of its huge population, Russia's fear of Chinese migration, and the precarious independence of Mongolia as its neighbours negotiate to extract its plentiful resources. Bringing together anthropologists, sociologists and economists, this timely collection of essays offers new perspectives on an area that is currently of enormous economic, strategic and geo-political relevance.

**Buy, Build, Or Steal** Phillip Charles Saunders,Joshua K. Wiseman,2011 This study identifies potential aviation technology development and procurement strategies, presents a general model of the options available to developing countries, and applies that model to explain Chinese procurement and aviation technology acquisition efforts over the last 60 years. The model articulates three main technology procurement avenues: purchase (buy), indigenous development (build), and espionage (steal), and three subavenues: reverse engineering (combining buy/steal and build), coproduction (combining buy and build), and codevelopment (combining buy and build, with an emphasis on build). It examines the costs, benefits, and tradeoffs inherent in each approach. Four variables influence decisions about the mix of strategies: (1) a country's overall level of economic development, in particular the state of its technical/industrial base; (2) the technological capacity of a country's military aviation sector; (3) the willingness of foreign countries to sell advanced military aircraft, key components, armaments, and related production technology; and (4) the country's bargaining power vis-avis potential suppliers.

Aircraft Design Mohammad H. Sadraey,2012-11-20 A comprehensive approach to the air vehicle design processusing the principles of systems engineering Due to the high cost and the risks associated with development,complex aircraft systems have become a prime candidate for theadoption of systems engineering methodologies. This book presents the entire process of aircraft design based on a systemsengineering approach from conceptual design phase, through to preliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraftdesign, this book covers the components and the issues

affected by design procedures. The basic topics that are essential to the process, such as aerodynamics, flight stability and control, aero-structure, and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic manner to emphasise the integration of the individual components into the overall design. Throughout the book the various design options are considered and weighed against each other, to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero-structure, and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real-world projects. Key features:

- Provides full coverage of the design aspects of an air vehicle including: aeronautical concepts, design techniques and design flowcharts
- Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level
- Includes fundamental explanations for aeronautical engineering students and practicing engineers
- Features a solutions manual to sample questions on the book's companion website

Private Empire Steve Coll, 2013-05-28 "ExxonMobil has met its match in Coll, an elegant writer and dogged reporter . . . extraordinary . . . monumental." —The Washington Post "Fascinating . . . Private Empire is a book meticulously prepared as if for trial . . . a compelling and elucidatory work." —Bloomberg From the award-winning and bestselling author of Ghost Wars and Directorate S, an extraordinary exposé of Big Oil. Includes a profile of current Secretary of State and former chairman and chief executive of ExxonMobil, Rex Tillerson In this, the first hard-hitting examination of ExxonMobil—the largest and most powerful private corporation in the United States—Steve Coll reveals the true extent of its power. Private Empire pulls back the curtain, tracking the corporation's recent history and its central role on the world stage, beginning with the Exxon Valdez accident in 1989 and leading to the Deepwater Horizon oil spill in the Gulf of Mexico in 2010. The action spans the globe—featuring kidnapping cases, civil wars, and high-stakes struggles at the Kremlin—and the narrative is driven by larger-than-life characters, including corporate legend Lee "Iron Ass" Raymond, ExxonMobil's chief executive until 2005, and current chairman and chief executive Rex Tillerson, President-elect Donald Trump's nomination for Secretary of State. A penetrating, news-breaking study, Private Empire is a defining portrait of Big Oil in American politics and foreign policy.

Foxbats Over Dimona Isabella Ginor, Gideon Remez, 2008-10-01 Isabella Ginor and Gideon Remez's groundbreaking history of the Six-Day War in 1967 radically changes our understanding of that conflict, casting it as a crucial arena of Cold War intrigue that has shaped the Middle East to this day. The authors, award-winning Israeli journalists and historians, have investigated newly available documents and testimonies from the former Soviet Union, cross-checked them against Israeli and Western sources, and arrived at fresh and startling conclusions. Contrary to previous interpretations, Ginor and Remez's book shows that the Six-Day War was the result of a joint Soviet-Arab gambit to provoke Israel into a preemptive attack. The authors reveal how the Soviets received a secret Israeli message indicating that Israel, despite its official ambiguity, was about to acquire nuclear weapons. Determined to destroy Israel's nuclear program before it could produce an atomic bomb, the Soviets then began preparing for war—well before Moscow accused Israel of offensive intent, the overt trigger of the crisis. Ginor and Remez's startling account details how the Soviet-Arab onslaught was to be unleashed once Israel had been drawn into action and was branded as the aggressor. The Soviets had submarine-based nuclear missiles poised for use against Israel in case it already possessed and tried to use an atomic device, and the USSR prepared and actually began a marine landing on Israel's shores backed by strategic bombers and fighter squadrons. They sent their most advanced, still-secret aircraft, the MiG-25 Foxbat, on provocative sorties over Israel's Dimona nuclear complex to prepare the planned attack on it, and to scare Israel into making the first strike. It was only the unpredicted devastation of Israel's response that narrowly thwarted the Soviet design.

Tupolev Tu-16 Badger Yefim Gordon, Vladimir Rigmant, 2004-06-21 The establishment of NATO posed the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics

and systems. The Tu-16 even found civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West. Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967. Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.

**ColdFusion Presents: New Thinking** Dagogo Altraide, 2019-01-15 The creator of YouTube's ColdFusion explores the development of technology from Industrial Revolution to Artificial Intelligence to figure out what's next. As each new stage of technology builds on the last, advancements start to progress at an exponential rate. In order to know where we're headed, it's essential to know how we got here. What hidden stories lie behind the technology we use today? What drove the men and women who invented it? What were those special moments that changed the world forever? Dagogo Altraide explores these questions in a history of human innovation that reveals how new technologies influence each other, how our modern world came to be, and what future innovations might look like. From the electric world of Tesla and the steam engine revolution to the first computers, the invention of the internet, and the rise of artificial intelligence, New Thinking tells the stories of the men and women who changed our world with the power of new thought.

*The Evolution of the Airline Industry* James Baldwin, 2019-08-18 This book gives a brief but concise narrative on the evolution of the airline industry from its beginnings to the present day. The focus is on regulations, historic events and influencing factors that shaped the industry. Starting with the Wright Flyer, the book details the early conventions and regulatory framework, the development of the commercial airline industry through the 1930s, World War II and the Chicago Convention, that created the current regulatory framework of the industry. The book then goes into the regulated and protectionist era and developments that eventually led to the deregulation and liberalization of the industry. At this point, the industry transcended from heavy government involvement to an industry driven by economic factors. Following this change, the industry experienced unprecedented growth leading to the formation of the so-called Sixth Freedom airlines, the airline alliances and the low-cost and ultra-low-cost carriers. This book is an excellent guide to how the airline industry evolved into what it is today.

Energy Minimization Methods in Computer Vision and Pattern Recognition Anand Rangarajan, Mário A. T. Figueiredo, 2003-06-26 This book constitutes the refereed proceedings of the 4th International Workshop on Energy Minimization Methods in Computer Vision and Pattern Recognition, EMMCVPR 2003, held in Lisbon, Portugal in July 2003. The 33 revised full papers presented were carefully reviewed and selected from 66 submissions. The papers are organized in topical sections on unsupervised learning and matching, probabilistic modeling, segmentation and grouping, shape modeling, restoration and reconstruction, and graphs and graph-based methods.
