Introductory Grammar of Amharic Wolf Leslau, 2000
This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's *Traite de langue amharique* (1936), but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove to be useful for the Semitist as well as for the general linguist.

JeongMee Yoon Bonnie Yochelson, 2019 Why do girls love pink toys, and boys love blue ones? The fine arts photographer Jeongmee Yoon (*1969, Seoul) poses this question in her work, *The Pink and Blue Project*, for which she began photographing Korean and American girls and boys in their rooms in 2005. The gender-specific color schemes quickly established themselves as an overarching phenomenon, independent of cultural or ethnic background. Yoon's impressive portraits, for which she spent hours carefully arranging pink or blue objects, question these color codes and the consumer habits of both parents and children. They reveal the connections linking gender identity and social norms, consumer culture, and media. She continued this project by visiting the children years later and capturing how their favorite colors had changed. Jeongmee Yoon was awarded the ILWOO Foundation Prize for her project.

The India Way Peter Cappelli, 2010 Exploding growth. Soaring investment. Incoming talent waves. India's top companies are scoring remarkable successes on these fronts - and more. How? Instead of adopting management practices that dominate Western businesses, they're applying fresh

practices of their own in strategy, leadership, talent, and organizational culture. In *The India Way*, the Wharton School India Team unveils these companies' secrets. Drawing on interviews with leaders of India's largest firms - including Mukesh Ambani of Reliance Industries, Narayana Murthy of Infosys Technologies, and Vineet Nayar of HCL Technologies - the authors identify what Indian managers do differently, including: Looking beyond stockholders' interests to public mission and national purpose Drawing on improvisation, adaptation, and resilience to overcome endless hurdles Identifying products and services of compelling value to customers Investing in talent and building a stirring culture The authors explain how these innovations work within Indian companies, identifying those likely to remain indigenous and those that can be adapted to the Western context. With its in-depth analysis and research, *The India Way* offers valuable insights for all managers seeking to strengthen their organization's performance.

Hardware Malware Edgar Weippl, Christian Krieg, Adrian Dabrowski, 2022-05-31 In our digital world, integrated circuits are present in nearly every moment of our daily life. Even when using the coffee machine in the morning, or driving our car to work, we interact with integrated circuits. The increasing spread of information technology in virtually all areas of life in the industrialized world offers a broad range of attack vectors. So far, mainly software-based attacks have been considered and investigated, while hardware-based attacks have attracted comparatively little

interest. The design and production process of integrated circuits is mostly decentralized due to financial and logistical reasons. Therefore, a high level of trust has to be established between the parties involved in the hardware development lifecycle. During the complex production chain, malicious attackers can insert non-specified functionality by exploiting untrusted processes and backdoors. This work deals with the ways in which such hidden, non-specified functionality can be introduced into hardware systems. After briefly outlining the development and production process of hardware systems, we systematically describe a new type of threat, the hardware Trojan. We provide a historical overview of the development of research activities in this field to show the growing interest of international research in this topic. Current work is considered in more detail. We discuss the components that make up a hardware Trojan as well as the parameters that are relevant for an attack. Furthermore, we describe current approaches for detecting, localizing, and avoiding hardware Trojans to combat them effectively. Moreover, this work develops a comprehensive taxonomy of countermeasures and explains in detail how specific problems are solved. In a final step, we provide an overview of related work and offer an outlook on further research in this field.
