Starship Troopers Robert Anson Heinlein, 1987 In a futuristic military adventure a recruit goes through the roughest boot camp in the universe and into battle with the Terran Mobile Infantry in what historians would come to call the First Interstellar War

War in the Age of Intelligent Machines Manuel De Landa, 1991 The author aims to show how the emergence of intelligent and autonomous bombs and missiles equipped with artificial perception and decision-making capabilities represents a profound historical shift in the relation of human beings both to machines and to information.

Ethics for the Information Age Michael Jay Quinn, 2006 Widely praised for its balanced treatment of computer ethics, Ethics for the Information Age offers a modern presentation of the moral controversies surrounding information technology. Topics such as privacy and intellectual property are explored through multiple ethical theories, encouraging readers to think critically about these issues and to make their own ethical decisions.

Anime from Akira to Princess Mononoke S. Napier, 2001-05-03 With the popularity of Pokemon still far from waning, Japanese animation, known as anime to its fans, has a firm hold on American

pop culture. However, anime is much more than children's cartoons. It runs the gamut from historical epics to sci-fi sexual thrillers. Often dismissed as fanciful entertainment, anime is actually quite adept at portraying important social and cultural issues like alienation, gender inequality, and teenage angst. This book investigates the ways that anime presents these issues in an in-depth and sophisticated manner, uncovering the identity conflicts, fears over rapid technological advancement, and other key themes present in much of Japanese animation.

Submarine Commander Paul R. Schratz, 2013-07-24 A fascinating personal memoir of underwater combat in World War II, told by a man who played a major role in those dangerous operations. Frank and beautifully written, Submarine Commander's breezy style and irrepressible humor place it in a class by itself. This book will be of lasting value as a submarine history by an expert and as an enduring military and political analysis. In early 1943 the submarine USS Scorpion, with Paul R. Schratz as torpedo officer, slipped into the shallow waters east of Tokyo, laid a minefield, and made successful torpedo attacks on merchant shipping. Schratz participated in many more patrols in heavily mined Japanese waters as executive officer of the Sterlet and the

Atule. At war's end he participated in the Japanese surrender, aided the release of American POWs, and had a key role in the disarming of enemy suicide submarines. He then took command of the revolutionary new Japanese submarine I-203 and returned it to Pearl Harbor. But this was far from the end of Schratz's submarine career. In 1949 he commissioned the ultramodern USS Pickerel, the most deadly submarine then afloat, and set a world's record in a 21-day, 5,200-mile submerged passage from Hong Kong to Honolulu. With the outbreak of the Korean War, the Pickerel was immediately sent to Korea to participate in secret intelligence operations only recently declassified and never before revealed in print. Schratz's broad military experience makes this a far from ordinary memoir.

Propaganda Jacques Ellul, 2021-07-27 This seminal study and critique of propaganda from one of the greatest French philosophers of the 20th century is as relevant today as when it was first published in 1962. Taking not only a psychological approach, but a sociological approach as well, Ellul's book outlines the taxonomy for propaganda, and ultimately, its destructive nature towards democracy. Drawing from his own experiences fighting for the French resistance against the Vichy regime, Ellul offers a

unique insight into the propaganda machine.

Entrepreneurship Marc J. Dollinger, 1999 New to Prentice Hall, this upper-level Entrepreneurship text is perfect for the MBA or Executive MBA market. Brief, paperback, the text frames the theories and applications of entrepreneurship within a resource-based theory focus. The new edition is designed to be more user-friendly, with increased pedagogy, (such as the Street Stories mini-cases.)

Blown to Bits Harold Abelson, Ken Ledeen, Harry R. Lewis, 2008 'Blown to Bits' is about how the digital explosion is changing everything. The text explains the technology, why it creates so many surprises and why things often don't work the way we expect them to. It is also about things the information explosion is destroying: old assumptions about who is really in control of our

lives.

Permanent Present Tense Suzanne Corkin, 2013-05-15 In

Permanent Present Tense Suzanne Corkin tells the incredible story of the amnesiac Henry Gustave Molaison - known only as H.M. until his death in 2008 - and what he taught medical science, neuroscience and the world. In 1953, at the age of twenty-seven, Molaison underwent an experimental psychosurgical procedure intended to alleviate his debilitating epilepsy. The outcome was devastating - when Molaison awoke he was unable to form new memories and for the rest of his life would be trapped in the moment. But Molaison's tragedy would prove a gift to humanity, illuminating functions and structures of the brain and revolutionizing the neuroscience of memory. His amnesia became a touchstone for memory impairment in other patients. For nearly five decades,

distinguished neuroscientist Suzanne Corkin studied Molaison and oversaw his care. Her account of his life and legacy in *Permanent Present Tense* reveals an intelligent man who, despite his profound amnesia, was altruistic, friendly, open, and humorous. She explores how his case transformed an entire field, helping to address eternal questions. How do we store and retrieve memories? How do we know that there are different kinds of memory, controlled by different brain circuits? Is our identity bound up with remembering? If you can recall people or events for only a few seconds and cannot learn from the past or plan the future, can you still live a meaningful life? *Permanent Present* explores the astonishing complexity of the human brain with great clarity, sensitivity, and grace, showing how one man's story challenged our very notions of who we are. Suzanne Corkin is Professor of Behavioral Neuroscience and head of the Corkin Lab at MIT. The author of nine books, Corkin lives in Charlestown, Massachusetts. 'A fascinating account of perhaps the most important case study in the history of neuroscience, rich with implications for our understanding of the brain, our experience, and what it means to be human' Steven Pinker, author of *'How the Mind Works'* and *'The Stuff of Thought'* 'The best way to understand memory is to witness

the ways it can disassemble. In this remarkable book, Suzanne Corkin gifts us with a rare insider's view, revealing how a man who could not remember his immediate past so profoundly influenced science's future' David Eagleman, neuroscientist and New York Times-bestselling author of 'Incognito: The Secret Lives of the Brain' 'Suzanne Corkin has written an enjoyable and sensitive story of H.M.'s life and what it has taught us about memory. Millions of patients have been the source of advances in science but few are celebrated as individuals. We learn through H.M. that 'Our brains are like hotels with eclectic arrays of guests-homes to different kinds of memory, each of which occupies its own suite of rooms' Philip A. Sharp, Institute Professor, Massachusetts Institute of Technology, and winner of the Nobel Prize in Physiology or Medicine 'Drawing on her unique investigations over more than four decades, neuroscientist Suzanne Corkin relates the fascinating story of how one severely amnesic man transformed our understanding of mind, brain, and memory' Howard Gardner, author of 'Multiple Intelligences'

Radiology Education Rethy K. Chhem, Kathryn M.

Hibbert, Teresa van Deven, 2008-10-01 This is a book about scholarship in the broadest sense. The writing of this book has

shown how through scholarship we can bring together academics, practitioners, scientists, radio logists, and administrators from around the world to begin the kinds of conversations that promise to move us to a new way of thinking about and enacting radiology education. Over the past century, we have witnessed tremendous change in biomedical science and the scope of this change has demanded new approaches to medical education. The most significant of the changes in medical education has been a fundamental paradigm shift from a teacher-centered approach to a student-centered approach. This shift, combined with the explosion of knowledge, has pressed medical schools to undertake major curricular and institutional reform. At the same time, progress in medical education research methods has led to innovative approaches to support the improvement of learning methods and evaluation. Over the past several years there has also been a shift toward thinking about and planning for medical education beyond the undergraduate level to include postgraduate and continuing medical education, but also to consider learning within the professional environment and the development of professional continuous education. Viewing medical education as a continuum that spans from the first year of medical school until retirement

introduces new ways to conceptualize the teaching and learning needs that address lifelong learning demands that extend over 30 or 40 years.

Gramophone, Film, Typewriter Friedrich A. Kittler, 1999 On history of communication

The Transformation of the Armed Forces Michele Nones, Alessandro Marrone, 2012 Information technology (IT) has had, and will continue to have, a deep impact on the defence sector. The most advanced countries, not only the U.S. but also France, Great Britain and Italy, over the past few years have undergone a transformation of their armed forces aimed at exploiting the strategic advantages of IT. The goal pursued in Europe, and also promoted by NATO, is Network Enabled Capability (NEC). That is combining equipment and soldiers, as well as different doctrinal, procedural, technical and organizational elements, into a single network to obtain their interaction in order to achieve substantial strategic superiority. In practice, this also occurs with a strong, efficient and secure telecommunications network, and through netcentric modernization of armed forces' capability and systems aimed at connecting them to the net. This research paper analyzes the military netcentric modernization and

transformation programs - still in progress - in France, Britain and Italy, with special focus on the joint program led by the Italian army called Forza NEC. Opportunities and challenges of Forza NEC have been considered according to the Italian armed force's requirements, developed during two decades of experience in international military operations, as well as in the light of the evolution of strategic doctrine at a European and transatlantic level. Particular attention has been devoted to the interaction between industry and the armed forces, and to the involvement of many Italian companies in different Forza NEC activities, as it represents one of the pillars of the procurement program.

With Our Backs to Berlin Tony Le Tissier, 2005-03-24 Based upon interviews with a wide-range of former German Army and SS soldiers, these unique personal episodes vividly depict the extraordinary circumstances of the Third Reich's final days as armies closed in from all sides. Le Tissier's interviews link the brutality of combat with the humanity of the desperate battles.

Armor and Blood: The Battle of Kursk Dennis E.

Showalter, 2013-08-27 One of America's most distinguished military historians offers the definitive account of the greatest tank battle of World War II—an epic clash of machines and men that matched the

indomitable will of the Soviet Red Army against the awesome might of the Nazi Wehrmacht. While the Battle of Kursk has long captivated World War II aficionados, it has been unjustly overlooked by historians. Drawing on the masses of new information made available by the opening of the Russian military archives, Dennis Showalter at last corrects that error. This battle was the critical turning point on World War II's Eastern Front. In the aftermath of the Red Army's brutal repulse of the Germans at Stalingrad, the stakes could not have been higher. More than three million men and eight thousand tanks met in the heart of the Soviet Union, some four hundred miles south of Moscow, in an encounter that both sides knew would reshape the war. The adversaries were at the peak of their respective powers. On both sides, the generals and the dictators they served were in agreement on where, why, and how to fight. The result was a furious death grapple between two of history's most formidable fighting forces—a battle that might possibly have been the greatest of all time. In *Armor and Blood*, Showalter re-creates every aspect of this dramatic struggle. He offers expert perspective on strategy and tactics at the highest levels, from the halls of power in Moscow and Berlin to the battlefield command posts on both sides. But it is the author's

exploration of the human dimension of armored combat that truly distinguishes this book. In the classic tradition of John Keegan's *The Face of Battle*, Showalter's narrative crackles with insight into the unique dynamics of tank warfare—its effect on men's minds as well as their bodies. Scrupulously researched, exhaustively documented, and vividly illustrated, this book is a chilling testament to man's ability to build and to destroy. When the dust settled, the field at Kursk was nothing more than a wasteland of steel carcasses, dead soldiers, and smoking debris. The Soviet victory ended German hopes of restoring their position on the Eastern Front, and put the Red Army on the road to Berlin. *Armor and Blood* presents readers with what will likely be the authoritative study of Kursk for decades to come. Advance praise for *Armor and Blood* "The size and the brutality of the vast tank battle at Kursk appalls, this struggle that gives an especially dark meaning to that shopworn phrase 'last full measure.' Prepare yourself for a wild and feverish ride over the steppes of Russia. You can have no better guide than Dennis E. Showalter, who speaks with an authority equaled by few military historians."—Robert Cowley, founding editor of *MHQ: The Quarterly Journal of Military History* "A fresh, skillful, and complete synthesis of recent revelations

about this famous battle . . . As a myth buster, *Armor and Blood* is a must-read for those interested in general and military history.”—David M. Glantz, editor of *The Journal of Slavic Military Studies* “Refreshingly crisp, pointed prose . . . Throughout, [Showalter] demonstrates his adeptness at interweaving discussions of big-picture strategy with interesting revelations and anecdotes. . . . Showalter does his best work by keeping his sights set firmly on the battle at hand, while also parsing the conflict for developments that would have far-reaching consequences for the war.”—Publishers Weekly

Mediapolis Alex de Jong, Marc Schuilenburg, 2006 Popular culture is taking an ever firmer grip on our living environment and on our lives. Survey of the urban pop culture and of concepts of pop philosophy. Bespreking van K. Wenz 'Changing popular culture in relation to urban space' verschenen in: *Krisis*. (2008)1(.89-91).

Mechademia 3 Frenchy Lunning, 2014-11-01 Dramatic advances in genetics, cloning, robotics, and nanotechnology have given rise to both hopes and fears about how technology might transform humanity. As the possibility of a posthuman future becomes increasingly likely, debates about how to interpret or shape this future abound. In Japan, anime and manga artists have

for decades been imagining the contours of posthumanity, creating dazzling and sometimes disturbing works of art that envision a variety of human/nonhuman hybrids: biological/mechanical, human/animal, and human/monster. Anime and manga offer a constellation of posthuman prototypes whose hybrid natures require a shift in our perception of what it means to be human. *Limits of the Human*—the third volume in the *Mechademia* series—maps the terrain of posthumanity using manga and anime as guides and signposts to understand how to think about humanity’s new potentialities and limits. Through a wide range of texts—the folklore-inspired monsters that populate Mizuki Shigeru’s manga; Japan’s Gothic Lolita subculture; Tezuka Osamu’s original cyborg hero, Atom, and his manga version of Fritz Lang’s *Metropolis* (along with Ôtomo Katsuhiro’s 2001 anime film adaptation); the robot anime, *Gundam*; and the notion of the uncanny in *Ghost in the Shell 2: Innocence*, among others—the essays in this volume reject simple human/nonhuman dichotomies and instead encourage a provocative rethinking of the definitions of humanity along entirely unexpected frontiers.
