Influence of Government Policies on Industry Development: The Case of India's Automotive

Industry Mahipat Ranawat, 2009 Project Report from the year 2009 in the subject Business economics - Economic Policy, grade: 1.3, Hamburg University of Technology (Technology & Innovation Management), course: Project-work for the Master's in International Production Management program, language: English, abstract: The automotive industry in India has come a long way from its nascent state at the time of India's independence in 1947 to its present day dynamic form. As compared to the production of mere 4,000 vehicles in 1950, the production of the industry crossed the historic landmark of 10 million vehicles in 2006. Today, the industry produces a wide range of automobiles and auto-components catering to both the domestic as well as foreign markets. The development of the industry has been shaped by the demand on the one hand and the government interventions on the other; the influence of the latter being considerable. The evolution of India's automotive industry is identified to have occurred in four phases. In the first (1947-1965) and second phase (1966-1979), the important

policies identified were related to protection, indigenisation and regulation of the industry. On the one hand, these policies helped India to build an indigenous automotive industry, while on the other it led to unsatisfactory industry performance. In the third phase (1980-1990), the single most important policy identified was the one with regard to relaxation in the means of technology acquisition. The foreign competition inducted into the industry transformed its dynamics. Lastly, in the fourth phase (1991 onwards) the liberalisation with regard to foreign investment had a significant influence on the Indian automotive industry as we see it today. This work traces the evolution of the automotive industry from its inception to present day and identifies the important policies made by the Indian government. The work also studies the influence of important policies on the development of the industry. Keywords: Governm

Automotive FDI in Emerging Europe A. J. Jacobs, 2017-06-19 This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the

author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

An Introduction to Sustainable Transportation Preston L. Schiller, Eric Christian Bruun, Jeffrey R. Kenworthy, 2010 Transportation plays a substantial role in the modern world; it provides tremendous benefits to society, but it also imposes significant economic, social and environmental costs. Sustainable transport planning requires integrating environmental, social, and economic factors in order to develop optimal solutions to our many pressing issues, especially carbon emissions and climate change. This essential multi-authored work reflects a new sustainable transportation planning paradigm. It explores the concepts of sustainable development and sustainable transportation, describes practical techniques for comprehensive evaluation, provides tools for multi-modal transport planning, and presents innovative mobility management solutions to transportation problems. This text

reflects a fundamental change in transportation decision making. It focuses on accessibility rather than mobility, emphasizes the need to expand the range of options and impacts considered in analysis, and provides practical tools to allow planners, policy makers and the general public to determine the best solution to the transportation problems facing a community. Featuring extensive international examples and case-studies, textboxes, graphics, recommended reading and end of chapter questions, the authors draw on considerable teaching and researching experience to present an essential, ground-breaking and authoritative text on sustainable transport. Students of various disciplines, planners, policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability.

Statistics Using Technology, Second Edition Kathryn Kozak, 2015-12-12 **Statistics With Technology, Second Edition**, is an introductory statistics textbook. It uses the TI-83/84 calculator and R, an open source statistical software, for all calculations. Other technology can also be used besides the TI-83/84

calculator and the software R, but these are the ones that are presented in the text. This book presents probability and statistics from a more conceptual approach, and focuses less on computation. Analysis and interpretation of data is more important than how to compute basic statistical values.

A History of Japan's Government-Business Relationship Phyllis Genther, 2020-08-06 Despite the economic and political importance of the U.S.-Japan relationship and the extensive attention paid to automotive trade, few American scholars or policy makers are familiar with the history of Japanese government-business relations, either generally or for specific industries such as passenger cars. This book hopefully helps in a small way to fill that gap in our knowledge and, thus, to help strengthen the foundation from which we make public policy decisions about bilateral trade. [ix]

The Rise of Ersatz Capitalism in South-East Asia Kunio Yoshihara, 1988 This book by a leading expert considers the growth of an inefficient superlayer in Southeast Asian economies and assesses

the problems that this poses for future economic development. Yoshihara argues that as technological backwardness, the low quality of government intervention, and discrimination against those of Chinese descent have prevented capitalism from stimulating development, there has emerged a brand of ersatz capitalism very different from the capitalism in Japan and the West. He goes on to offer recommendations for creating a dynamic capitalism while acknowledging that obstacles to their implementation exist in current Southeast Asian social and political systems.
