Excerpt: ...machines has been studied experimentally at the National Physical Laboratory, at the Aerodynamic Laboratory at Gottingen, and by M. F. Eiffel, in Paris. A few results relating to strut sections are given in Fig. 31a. The graph a a is a plotting from National Physical Laboratory data,² relating to the section A, representing one of the best forms tested, graphs b and c relating to sections B and C as determined by M. Eiffel.¹ In Fig. 31a ordinates represent resistance coefficient both in absolute units and in terms of normal plane (the normal plane unit being that of maximum section). In Fig. 316 are shown two strut-sections designed at the Royal Aircraft Factory. These were reported upon by the N.P.L. as giving less resistance for given strength than a number of others submitted. Approximately, strength for strength, 1 Report of the Advisory Committee for Aeronautics, 1912-1913, No. 83. J Report of the Advisory Committee for Aeronautics, 1912-1913, p. 111. 1 Resistance of the Air and Aviation, p. 184. 20 30 VELOCITY Fig. 31a. these gave one-fourth the resistance of struts of circular section.² The resistance of wires and ropes has been investigated both by the National Physical Laboratory and by Professor Prandtl of Gottingen. The position may be summarized here by saying that the resistance of a rope or stranded cable, at right angles to the direction of motion, is virtually equal to that of its area projected on a normal plane. The resistance of smooth wires is about 20 per cent. less. Both these results only hold good above a certain minimum value of LV, which may be taken at about 1.5; thus at

100 feet per second, the rule may be taken as applying to cables or wires down to about inch (= 0.015 foot) diameter.1! Report of...

Modelling and Control of Mini-Flying Machines Pedro

Castillo Garcia, Rogelio Lozano, Alejandro Enrique

Dzul, 2009-10-12 Modelling and Control of Mini-Flying Machines

is an exposition of models developed to assist in the motion

control of various types of mini-aircraft: • Planar Vertical Take-off and Landing aircraft; • helicopters; • quadrotor mini-rotorcraft; •

other fixed-wing aircraft; • blimps. For each of these it

propounds: • detailed models derived from Euler-Lagrange

methods; • appropriate nonlinear control strategies and

convergence properties; • real-time experimental comparisons of

the performance of control algorithms; • review of the principal

sensors, on-board electronics, real-time architecture and

communications systems for mini-flying machine control,

including discussion of their performance; • detailed explanation

of the use of the Kalman filter to flying machine localization. To

researchers and students in nonlinear control and its applications

Modelling and Control of Mini-Flying Machines provides valuable

insights to the application of real-time nonlinear techniques in an

always challenging area.

The Flying-machine from an Engineering Standpoint

Frederick William Lanchester, 1917

Flying Machine, 2007 Provides an introduction to the history of flight and explores the various aircraft in use today.

Modelling and Control of Mini-flying Machines Pedro

Castillo, 2007 Problems in the motion control of aircraft are of perennial interest to the control engineer as they tend to be of

complex and nonlinear nature. Modelling and Control of Mini-Flying Machines is an exposition of models developed for various types of mini-aircraft : planar Vertical Take-off and Landing aircraft, helicopters, quadrotor mini-rotorcraft, other fixed-wing aircraft, blimps. For each of which it propounds: detailed models derived from Euler-Lagrange methods, appropriate nonlinear control strategies and convergence properties, real-time experimental comparisons of the performance of control algorithms, review of the principal sensors, on-board electronics, real-time architecture and communications systems for mini-flying machine control, including discussion of their performance, detailed explanation of the use of the Kalman filter to flying machine localization. To researchers and students in nonlinear control and its applications this book provides valuable insights to the application of real-time nonlinear techniques in an always challenging area.

Visions of a Flying Machine Peter L. Jakab,1997

The Delights of Wisdom Pertaining to Conjugal Love
Emanuel Swedenborg,1912

Aviation Systems Andreas Wittmer,Thomas Bieger,Roland Müller,2011-08-17 This book aims to provide comprehensive coverage of the field of air transportation, giving attention to all major aspects, such as aviation regulation, economics, management and strategy. The book approaches aviation as an interrelated economic system and in so doing presents the “big picture” of aviation in the market economy. It explains the linkages between domains such as politics, society, technology, economy, ecology, regulation and how these influence each other. Examples of airports and airlines, and case studies in each chapter support the application-oriented approach. Students and researchers in business administration with a focus on the aviation industry, as well as professionals in the industry looking to refresh or broaden their knowledge of the field will benefit from this book.

A Scientist Explores Spirit George F. Dole, Robert H. Kirven, 1997 Richly illustrated, the book includes a chronology of the life of Swedish scientist-turned-seer Emanuel Swedenborg (1688-1772), a bibliography of his works, and an outline of his key theological concepts.

Heaven and Hell Emanuel Swedenborg, 1758

Regeneration Emanuel Swedenborg, 2014 Swedish scientist-turned-seer Emanuel Swedenborg (1688-1772) described regeneration, or spiritual growth and rebirth, as a lifelong process of transforming our inner selves through acts of love and kindness. This book brings together excerpts from his theological writings that illustrate how--and why--this earth-based, love-focused process works.

The Mandaean Book of John Charles G. Häberl, James F. McGrath, 2019-11-18 Given the degree of popular fascination with Gnostic religions, it is surprising how few pay attention to the one such religion that has survived from antiquity until the present day: Mandaism. Mandeans, who esteem John the Baptist as the most famous adherent to their religion, have in our time found themselves driven from their historic homelands by war and oppression. Today, they are a community in crisis, but they provide us with unparalleled access to a library of ancient Gnostic scriptures, as part of the living tradition that has sustained them across the centuries. Gnostic texts such as these have caught popular interest in recent times, as traditional assumptions about the original forms and cultural contexts of related religious traditions, such as Judaism, Christianity, and Islam, have been called into question. However, we can learn only so much from texts in isolation from their own contexts. Mandaean literature uniquely allows us not only to increase our knowledge about Gnosticism, and by extension all these other religions, but also to observe the relationship between Gnostic texts, rituals, beliefs, and living practices, both historically and in the present day.

The spirits' book Allan Kardec, 2021-11-11 After you have

read *The Spirits' Book*, you will no longer have any reason to fear death. *The Spirits' Book* will provide you with the answers to nearly all the questions you may have with regards to the origin, nature and destiny of each and every soul on earth – and those of other worlds as well. It also addresses the issues of God, creation, moral laws and the nature of spirits and their relationships with humans. The book contains answers that were dictated to mediums by highly evolved spirits who love God. *The Spirits' Book* is the initial landmark publication of a Doctrine that has made a profound impact on the thought and view of life of a considerable portion of humankind since the first French edition was published in 1857.

Fire in the Minds of Men James H. Billington, 1999 This book traces the origins of a faith--perhaps the faith of the century. Modern revolutionaries are believers, no less committed and intense than were Christians or Muslims of an earlier era. What is new is the belief that a perfect secular order will emerge from forcible overthrow of traditional authority. This inherently implausible idea energized Europe in the nineteenth century, and became the most pronounced ideological export of the West to the rest of the world in the twentieth century. Billington is interested in revolutionaries--the innovative creators of a new tradition. His historical frame extends from the waning of the French Revolution in the late eighteenth century to the beginnings of the Russian Revolution in the early twentieth century. The theater was Europe of the industrial era; the main stage was the journalistic offices within great cities such as Paris, Berlin, London, and St. Petersburg. Billington claims with considerable evidence that revolutionary ideologies were shaped as much by the occultism and proto-romanticism of Germany as the critical rationalism of the French Enlightenment. The conversion of social theory to political practice was essentially the work of three Russian revolutions: in 1905, March 1917, and November 1917. Events in the outer rim of the European world

brought discussions about revolution out of the school rooms and press rooms of Paris and Berlin into the halls of power. Despite his hard realism about the adverse practical consequences of revolutionary dogma, Billington appreciates the identity of its best sponsors, people who preached social justice transcending traditional national, ethnic, and gender boundaries. When this book originally appeared The New Republic hailed it as remarkable, learned and lively, while The New Yorker noted that Billington pays great attention to the lives and emotions of individuals and this makes his book absorbing. It is an invaluable work of history and contribution to our understanding of political life.

The Varieties of Religious Experience William James,1920

Passion of the Western Mind Richard Tarnas,2011-10-19

[This] magnificent critical survey, with its inherent respect for both the 'Westt's mainstream high culture' and the 'radically changing world' of the 1990s, offers a new breakthrough for lay and scholarly readers alike....Allows readers to grasp the big picture of Western culture for the first time. SAN FRANCISCO CHRONICLE Here are the great minds of Western civilization and their pivotal ideas, from Plato to Hegel, from Augustine to Nietzsche, from Copernicus to Freud. Richard Tarnas performs the near-miracle of describing profound philosophical concepts simply but without simplifying them. Ten years in the making and already hailed as a classic, THE PASSION OF THE WESERN MIND is truly a complete liberal education in a single volume.
