*Fusées et satellites de Youjnoe* Christian Lardier, 2023-04-01 Le bureau d'étude OKB-586/Youjnoe de Dniepropetrovsk en Ukraine a développé un grand nombre de fusées militaires, de lanceurs spatiaux et de satellites, notamment des séries Cosmos et Intercosmos. Ce sont des milliers de fusées et satellites de Youjnoe qui ont été, pour la plupart, produits en série par l'usine n°586/YoujMach. Cette entreprise, créée en 1951, a fêté ses 70 ans en 2021. Elle a été dirigée de 1954 à 1971 par Mikhaïl Yangel qui fut un des trois grands constructeurs soviétiques de la technique fuséo-cosmique avec Sergueï Korolev et Vladimir Tchelomeï. Fusées et satellites de Youjnoe traite des différents

programmes qui ont été réalisés pendant les 40 ans de la période soviétique liée à la course aux armements et à la course à l'espace entre les États-Unis et l'Union soviétique, puis pendant les 30 ans de la période ukrainienne caractérisée par la coopération avec l'Occident et l'ouverture de la commercialisation. L'ouvrage intègre les dernières informations issues des archives déclassifiées.

The Soyuz Launch Vehicle Christian Lardier, Stefan Barensky, 2013-03-12 "The Soyuz Launch Vehicle" tells the story, for the first time in a single English-language book, of the extremely successful Soyuz launch vehicle. Built as the world's first intercontinental ballistic missile (ICBM), Soyuz was adapted to launch not only Sputnik but also the first man to orbit Earth, and has been in service for over fifty years in a variety of forms. It has launched all Soviet manned spacecraft and is now the only means of reaching the International Space Station. It was also the workhorse for launching satellites and space probes and has recently been given a second life in French Guiana, fulfilling a commercial

role in a joint venture with France. No other launch vehicle has had such a long and illustrious history. This remarkable book gives a complete and accurate description of the two lives of Soyuz, chronicling the recent cooperative space endeavors of Europe and Russia. The book is presented in two parts: Christian Lardier chronicles the “first life” in Russia while Stefan Barensky explores its “second life,” covering Starsem, the Franco-Russian company and implementation of technology for the French Guiana Space Agency by ESA. Part One has been developed from Russian sources, providing a descriptive approach to very technical issues. The second part of the book tells the contemporary story of the second life of Soyuz, gathered from Western sources and interviews with key protagonists. “The Soyuz Launch Vehicle” is a detailed description of a formidable human adventure, with its political, technical, and commercial ramifications. At a time when a new order was taking shape in the space sector, the players being the United States, Russia, Europe and Asia, and when economic difficulties sometimes made it tempting to give up, this book reminds us that in the global sector, nothing is impossible.

**Fotosafari durch den Raketenwald** Bernd Leitenberger, 2019-06-28 Die Fotosafari durch den Raketenwald lädt sie ein auf eine Reise zu den Trägerraketen der Vergangenheit und Gegenwart. Anders als die bisherigen Raumfahrt-Bücher des Autors Bernd Leitenberger, wendet sich dieser Band nicht an technische interessierte Laien und Fachleute. Der Fokus liegt nicht auf einer ausführlichen Darstellung der Technik, als vielmehr auf eindrucksvollen Fotos der Startvorbereitungen oder des Starts, ergänzt um eine kurze Beschreibung des Trägers, seiner Einsatzgeschichte und Versionen. Die 2019-er Ausgabe enthält alle bis zum 1.4.2019 gestarteten Trägerraketen, darunter 10 neue aber auch 17 historische Träger, die in der ersten Auflage von 2016 fehlten. So stellt das Buch 102 Trägerraketen vor, die auf 108 Bildseiten mit meist großformatigen, seitenfüllenden Fotos präsentiert werden, die meisten davon (95) in Farbe. Die Bilder machen (wie der Titel schon andeutet) einen Großteil des Buches aus. Jede Rakete wird zusätzlich auf einer Seite allgemein verständlich beschrieben. Abgerundet wird das Buch durch ein Glossar, das die verwendeten Abkürzungen erklärt und Übersichten über die Einsatzgeschichte der Raketen. Die Fotosafari durch den Raketenwald eignet sich daher sowohl als Einstieg in die Raumfahrt, wie auch für die Liebhaber von prächtigen Fotos. Es ist zudem das ideale Geschenk für den Raumfahrtfan.

**Spacecraft Launch Sites Worldwide** Daphne Burleson, 2007 During the Cold War, rocket launches were often highly publicized as the global arms race quickened, with an explosion in development of ICBMs and manned spacecraft. Though launches are seldom broadcast today, rockets may be far more important in our daily lives than they were in decades past. We depend on satellites for telephone, internet and television service, in addition to intelligence gathering and scientific space exploration. This comprehensive directory describes spaceports and rocket launch sites around the world, including some that are under development or have been proposed for the future. Covering sites from the U.S. and former U.S.S.R. states to lesser-known spaceports in countries like Norway and Sweden, it provides an overview of launch operations and activities as well as unique milestones for each site. Numerous photographs are included. Appendices provide chronologies and launch tables for several major launch centers.

**The Rebirth of the Russian Space Program** Brian Harvey, 2007-05-10 This, fifty years after Sputnik, is the definitive book on the Russian space program. The author covers all the key elements of the current Russian space program, including both manned and unmanned missions. He examines the various types of unmanned applications programs as well as the crucial military program, and even analyzes the infrastructure of production, launch centres and tracking. You'll also find discussion of the commercialization of the program and its relationship with western companies. Russia's current space experiment is also put in a comparative global context. Strong emphasis is placed on Russia's future space intentions and on new programs and missions in prospect.

**The Complete Book of Spaceflight** David Darling, 2008-04-21 A commanding

encyclopedia of the history and principles of spaceflight-from earliest conceptions to faster-than-light galaxy-hopping Here is the first truly comprehensive guide to space exploration and propulsion, from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes. Space buffs will delight in its in-depth coverage of all key manned and unmanned missions and space vehicles-past, present, and projected-and its clear explanations of the technologies involved. Over the course of more than 2,000 extensively cross-referenced entries, astronomer David Darling also provides fascinating insights into the cultural development of spaceflight. In vivid accounts of the major characters and historical events involved, he provides fascinating tales of early innovators, the cross-pollination that has long existed between science fiction and science fact, and the sometimes obscure links between geopolitics, warfare, and advances in rocketry.

The Proton Launcher Christian Lardier, Stefan Barensky, 2018-02-14 The Soviet / Russian space program was in the hands of three industrial empires: those of Serguei Korolev, the Soviet von Braun who launched Sputnik-1 and Yuri Gagarin, Vladimir Tchelomei, his main competitor, and Mikhail Yangel, Many launchers and satellites in Ukraine. In 2011, we published a first book on the history of the Soyuz launcher that was developed by Korolev and launched more than 1,800 copies. This time, we tell the story of the Proton, the main competitor of the European launcher Ariane, which was developed by Chelomei and launched more than 400 copies. Finally, the last book of the trilogy will deal with the many developments of Yangel. In the three books, the first part deals with the history of rockets in the USSR / Russia (East) and the second part on the history of their

commercialization in the West.

Ilcev,2017-11-11 This book discusses global mobile satellite communications (GMSC) for maritime, land (road and rail), and aeronautical applications. It covers how these enable connections between moving objects such as ships, road and rail vehicles and aircrafts on one hand, and ground telecommunications subscribers through the medium of communications satellites, ground earth stations, Terrestrial Telecommunication Networks (TTN), Internet Service Providers (ISP) and other wireless and landline telecommunications providers. The new edition covers new developments and initiatives that have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits and projects of new hybrid satellite constellations. The book presents current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical

information, characteristics, graphics, illustrations and mathematics equations. It represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones. The first edition of Global Mobile Satellite Communications (Springer, 2005) was split into two books for the second edition – one on applications and one on theory. This book presents global mobile satellite communications applications.
