The Taking of K-129 Josh Dean, 2018-09-25 An incredible true tale of espionage and engineering set at the height of the Cold War--a mix between *The Hunt for Red October* and *Argo*--about how the CIA, the U.S. Navy, and America's most eccentric mogul spent six years and nearly a billion dollars to steal the nuclear-armed Soviet submarine K-129 after it had sunk to the bottom of the Pacific Ocean; all while the Russians were watching. In the early hours of February 25, 1968, a Russian submarine armed with three nuclear ballistic missiles set sail from its base in Siberia on a routine combat patrol to Hawaii. Then it vanished. As the Soviet Navy searched in vain for the lost vessel, a small, highly classified American operation using sophisticated deep-sea spy equipment found it--wrecked on the sea floor at a depth of 16,800 feet, far beyond the capabilities of any salvage that existed. But the potential intelligence assets onboard the ship--the nuclear warheads, battle orders, and cryptological machines--justified going to extreme lengths to find a way to raise the submarine. So began Project Azorian, a top secret mission that took six years, cost an estimated \$800 million, and would become the largest and most daring covert operation in CIA history. After the U.S. Navy declared retrieving the sub impossible, the mission fell to the CIA's burgeoning Directorate of Science and Technology, the little-known division responsible for the legendary U-2 and SR-71 Blackbird spy planes. Working with Global Marine Systems, the country's foremost maker of exotic, deep-sea drilling vessels, the CIA commissioned the most expensive ship ever built and told the world that it belonged to the reclusive billionaire Howard Hughes, who would use the mammoth ship to mine rare minerals from the ocean floor. In reality, a complex network of spies, scientists, and politicians attempted a project even crazier than Hughes's reputation: raising the sub directly under the watchful eyes of the Russians.

AIR CRASH INVESTIGATIONS: DEADLY MISTAKES The Crash of Air China Flight 129 George Cramoisi, editor, 2012-04 On April 15, 2002, Air China flight 129, a Boeing 767-200ER, operated by Air China, en route from Beijing, China to Busan, Korea, crashed on Mt. Dotdae, near Gimhae Airport, Busan. Of the 166 persons on board, 37 persons survived the crash, while 129 occupants were killed. The Korean Aviation Accident Investigation Board (KAAIB) determined that the probable cause of the crash was pilot error due to poor crew resource management and lost situational awareness during the circling approach of the runway. The Chinese investigation team pointed out that the Korean ATC was not fully licensed and mistakenly directed the airliner to descend to a wrong altitude and that the airport did not inform the crew of the weather conditions at the time. A contributing factor was that the airline made all announcements in Chinese and English, while most passengers were Korean.

Hyperpolarized Xenon-129 Magnetic Resonance Thomas Meersmann, Eike Brunner, 2015-04-14 Providing the first comprehensive book on the current state of hyperpolarized Xenon-129 NMR and MRI, this book is guaranteed to appeal to a wide range of scientists interested in this growing field. It is intended to create synergy between the various communities working with this noble gas. Covering all topics from the production of the hyperpolarized gas to its applications, the editors have invited a leading team of experts to combine the physical chemistry within the various topics and across disciplines. The scope will range from the fundamental aspects of optical

pumping to practical aspects of hyperpolarizers and hp-xenon handling. The applications section will focus on hyperpolarized xenon-129 detected in the dissolved phase or micro porous media where the chemical shift of xenon-129 can be used as a diagnostic probe. Appealing to researchers in the biomedical field and materials sciences, this reference book will provide background reading and future looking material in one place.

129 Xe Relaxation and Rabi Oscillations Mark E. Limes, 2015-03-13 This thesis describes longitudinal nuclear relaxation measurements of solid ¹²⁹Xe near 77 K with previously unattainable reproducibility, and demonstrates differences in relaxation, dependent upon the way in which the solid is condensed. These results are directly applicable to the generation and storage of large quantities of hyperpolarized ¹²⁹Xe for various applications, such as lung magnetic resonance imaging (MRI). The thesis features a sophisticated theoretical approach to these data sets, including modifications to a well-established Raman-phonon scattering theory that may explain the larger scatter in and discrepancies with previous work.

The Taking of K-129 Josh Dean, 2017-09-05 An incredible true tale of espionage and engineering set at the height of the Cold War—a mix between *The Hunt for Red October* and *Argo*—about how the CIA, the U.S. Navy, and America's most eccentric mogul spent six years and nearly a billion dollars to steal the nuclear-armed Soviet submarine K-129 after it had sunk to the bottom of the Pacific Ocean; all while the Russians were watching. In reality, a complex network of spies, scientists, and politicians attempted a project even crazier than Hughes's reputation: raising the sub directly under the watchful eyes of the Russians. *The Taking of K-129* is a riveting, almost unbelievable true-life tale of military history, engineering genius, and high-stakes spy-craft set during the height of the Cold War, when nuclear annihilation was a constant fear, and the opportunity to gain even the slightest advantage over your enemy was worth massive risk.
