**2001 Mars Odyssey** C.T. Russell,2004-03-31 Mars, the most habitable of our sister planets, holds a special place in our imaginations and in our space exploration program. Fully half of NASA's planetary exploration effort is now devoted to Mars. Key questions include: Has Mars ever harbored life? Is there life on Mars now? Will humans be able to survive on the Martian surface? Answers to these questions lie in determining the present location of water on Mars and its likely inventory in the past, and in determining the present radiation environment of Mars. The 2001 Mars Odyssey Mission contributes greatly these answers by detecting near-surface water through measurements of neutron flux, from the detection of carbonates, and the quantification of its radiation environment. This book captures the objectives, the design of the mission and the details of the instruments carried to Mars. It should be of interest to every scientist interested in participating in the on-going exploration of Mars from graduate students to senior scientists as it provides the background information essential to interpret the many exciting results now appearing from the mission.

Mars Robert Godwin,2004 In 1877 the famed Italian astronomer Giovanni Schiaparelli used his brand-new 8.6 inch telescope to study the planets. To his great surprise he suspected that he saw symmetry on Mars. In the years that followed one astronomer after another looked at the red planet and gradually a mythology was formed -- a mythology of alien intellect. By the 1890's the martial influence had spilled over into all walks of life and sparked philosophical debates and wondrous fictions. Scientists, fantasists and people of all creeds looked up and wondered -- is there life out there? Now, more than a century later, nations around the world are bombarding Mars with an unprecedented fleet of exploratory vehicles. Their journey taking less time than it took Amundsen and Shackleton to reach the poles of Earth, these small but hardy robotic emissaries are thrusting their way through the depths of interplanetary space to take up residence in the barren Martian deserts. Their goal is to answer one of the oldest questions in mankind's history. Is there life out there? In this sequel to the best-selling first volume, the reader is brought up to date with the most recent results from our nearest neighbour. Filled with a wealth of facts about the latest fleet of Martian explorers as well as a look at what may be coming next in mankind's most ambitious quest for knowledge. Includes DVD-V / DVD-ROM featuring: Exclusive interviews with Mars Rover Mission Scientist Steve Squyres, Senior Flight Engineer Rob Manning, Mission Manager Jim Eriksen, the complete Cornell animation of the Rovers created by Maas Digital, a NASA animation of a proposed Manned Mars mission, the exciting mission control broadcast of the landing of Opportunity in Meridiani Planum and as an added extra special bonus, extremely rare video of Dr Wernher von Braun filmed in 1976 at the occasion of his last public speech about Mars exploration.

Will humans be able to survive the martian surface? High Energy Neutron Detector Clyde Edward Wiegand, 1949 It is the purpose of this paper to describe a neutron detector suitable for monitoring a flux of neutrons whose energy is greater than about 50 Mev. Detection of the neutrons is accomplished by their ability to induce fission in heavy elements. Kelly and Wiegand studied the neutron fission of Bi, Pb, Ti, Hg, Au, and Pt at various neutron energies and the presently described counter is an application of this work.

Mars Direct Robert Zubrin,2013-02-12 "Bob Zubrin really, nearly alone, changed our thinking on this issue." —Carl Sagan, The Denver Post If you ever daydream about space travel and human space flight—or hope to one day rove the Red Planet alongside Curiosity—then MARS DIRECT will teach you how we can get there The human race is at a crossroads. In the coming decades, we will make decisions regarding our human spaceflight program that will lead to one of two familiar futures: the open universe of Star Trek, where we allow ourselves the opportunity to spread our wings and attempt to flourish as an interplanetary species—or the closed, dystopian, and ultimately self-destructive world of Soylent Green, constantly at war with one another over humanity's "limited" resources. If we plan to survive ourselves and one day travel to the stars, the human race's next stepping-stone must be a manned mission to and the eventual colonization of Mars. In this four-part e-special, Mars Society founder Dr. Robert Zubrin details the challenges of a manned Earth-to-Mars mission. Challenges which, according to Zubrin, we are technologically more prepared to overcome than the obstacles of the missions to the moon of the sixties and seventies. Dr. Zubrin's relatively simple plan, called Mars Direct, could feasibly have humans on the surface of Mars within a decade. Zubrin also discusses the current predicament of NASA, the promise of privatized space flight from companies like SpaceX, and the larger implication behind the absolute necessity to open the final frontier and transform from a planetary society into an interplanetary society. Our future as a species requires us to take baby steps away from the cradle that is planet Earth or, ultimately, perish here.

Modeling Reaction Control System Effects on Mars Odyssey National Aeronautics and Space Administration (NASA), 2018-06-19 During the Mars 2001 Odyssey aerobraking mission, NASA Langley Research Center performed 6 degree of freedom (6-DOF) simulations to determine rotational motion of the spacecraft. The main objective of this study was to assess the reaction control system models and their effects on the atmospheric flight of Odyssey. Based on these models, a comparison was made between data derived from flight measurements to simulated rotational motion of the spacecraft during aerobraking at Mars. The differences between the simulation and flight derived Odyssey data were then used to adjust the aerodynamic parameters to achieve a better correlation. Preventing the Forward Contamination of Mars National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Preventing the Forward Contamination of Mars, 2006-04-22 Recent spacecraft and robotic probes to Mars have yielded data that are changing our understanding significantly about the possibility of existing or past life on that planet. Coupled with advances in biology and life-detection techniques, these developments place increasing importance on the need to protect Mars from contamination by Earth-borne organisms. To help with this effort, NASA requested that the NRC examine existing planetary protection measures for Mars and recommend changes and further research to improve such measures. This report discusses policies, requirements, and techniques to protect Mars from organisms originating on Earth that could interfere with scientific investigations. It provides recommendations on cleanliness and biological burden levels of Mars-bound spacecraft, methods to reach those levels, and research to reduce uncertainties in preventing forward contamination of Mars.

Indian Martian Odyssey Srinivas Laxman,2014-07-31 India launched an unmanned orbiting to Mars in November 2013. Once the project got the approval of the government, it was readied in the shortest possible time and launched. So far it has been successful. If it succeeds in reaching Mars in September 2014, it will be the first Asian country to have been successful in the very first attempt itself. The flight has attracted worldwide interest, judging from the number of international correspondents who were present at Sriharikota for the launch. Called the Mars Orbiting Mission, or just MOM affectionately, it is equipped with five payloads, and their role is to study the Martian atmosphere and look for the elusive methane. There is also a Mars colour camera. The Indian Mars journey has been a topic of discussion at every level of Indian society, particularly among the younger generation. People would be interested in knowing after the mission was launched.
