Three Fingers of Death Danko Borojevic,Zoran Vukosavljevic,Mike Mihajlovic,2022-08-12 The story of one of the most successful air defense missile systems in history and eyewitness accounts from those who fought with and against this system. Perhaps no weapon ever produced had so many historical impacts in modern warfare, such as surface-to-air missiles produced in the Soviet Union. Originally designed to provide defense of the Soviet Union from attacks by American bombers during the Cold War, the first Soviet surface-to-air missiles decisively influenced the sequence of events, when they shot down the American U-2 reconnaissance airplanes over the USSR and Cuba. Soviet surface-to-air missiles were delivered to North Vietnam and played a significant role in the defense of North Vietnam inflicting a heavy toll upon US forces. A new generation of a mobile surface-to-air missiles during the October War of 1973 was a big surprise for the Israeli air force, which suffered considerable losses from these missiles. To this day, surface-to-air missiles manufactured in the Soviet Union and Russia are the backbone of the air defense for many countries. It is not surprising that a large number of surface-to-air missiles are still in use today, including the 2K12 Kub-M (SA6-6 Gainful) self-propelled missile system. Sergei Korolev conducted the first Soviet experiments with surface-to-air missiles before the outbreak of World War II. However, his further work on these experiments was cut short, due to the purges which brought Korolev to a gulag, under the accusation that he was undermining the Soviet government. During the war, the Red Army used unguided rockets nicknamed 'Katyusha' (officially designated as BM-13 Guards Mortar). One of the experiments with 'Katyusha' rockets was as barrage anti-aircraft missiles. After the great victory in World War II, Stalin ordered the German designers to be released and to form mixed teams for the production of ground-to-air missiles based on German technology, headed by Soviet designers. Soviet designer Isaiev led a team to develop a Soviet liquid-fueled rocket motor whose technology was based on the Germ

**Defending Putin's Empire** Mihajlo S Mihajlović,2023-08-26 During the Cold War, the Soviet Union invested heavily in its air defense systems. As a result, Russia now possesses the most advanced air and ballistic missile defense systems in the world. Russian air defense systems are also highly proliferated and are currently in use by many countries. Since the end of the Cold War and the breakup of the USSR, it has become increasingly possible to study Russian air defense, but Russia is by no means an open book on defense-related subjects. Some information circulates in the media, but for the time being, air defense systems are still subject to a degree of speculation. Air and ballistic missile defense programs in the Soviet Union and Russia have a very long history. Soviet engineers started working on both programs in the 1950s, and by 1960 they had built the first successful systems able to intercept enemy aircraft and intermediate-range ballistic missiles. Current Russian air defense doctrine follows a layered multi-level approach providing in depth coverage from any aerial or ballistic missile attack. This layered system allows Russian air defense forces to create zones that can be very difficult to penetrate. The highest level of these defensive networks uses long-range systems providing air defense umbrellas potentially up to 500+ km. The second level includes medium-range systems like the S-350 and Buk variants (infamous for downing Malaysian Airline's flight MH17 over the Ukraine in 2014). This medium-range level is intended to provide air defense zones which are also covered under the long-range systems but are more cost-effective in this envelope. The third level presents mobile short-range systems which are intended to provide extra protection for the long-range systems as well as stationary objects. These systems, along with highly mobile systems like the Buk are often also attached to ground forces formations such as armored and mechanized divisions and brigades. What are the abilities of these systems against NATO? President Putin emphasized the need to strengthen the country's air defenses amid NATO's military activities near Russia's borders. One of the key new concept developments is counter-stealth detection and interception. The other is to counter future hypersonic missile threats. It is, as the author reveals, Russia that is leading the way in these races.

*NATO and Warsaw Pact Armoured Fighting Vehicles of the Cold War* Michael Green,2024-01-30 While tanks were the most recognized armored vehicles during the Cold War, NATO and Warsaw Pact (WP) armies fielded a wide array of armored fighting vehicles (AFVs). These included armored cars, armored personnel carriers (APCs), anti-aircraft vehicles and self propelled artillery. Over the Cold War years nations both progressively developed series of AFVs and introduced entirely new ranges. APCs, vital to all frontline units, evolved from machine gun-armed battlefield taxis such as the US M113 and Soviet BTR-60 series into sophisticated infantry fighting vehicles. The Soviet BMP-1, US Bradley M2/M3, West German Marder and British Warrior and CVR series were classic examples of the latter, with numerous variants. The Soviet BRDM-2 series was the most numerous armored car. The British Army fielded the Saladin, Ferret and Fox and the German Army introduced the eight-wheeled Luchs and tracked SPZ11-2 Kurz. Early anti-aircraft vehicles, such as the American M42 with two 40mm Bofors, were superseded by the formidable Soviet ZSU-23-4 Shilka and the West German Gepard with radar-guided guns. This authoritative and superbly illustrated book covers the full range of AFVs in service with NATO and WP armies over the four decades of the Cold War. It will be an invaluable addition to the libraries of the expert and layman alike.

**"Ironsides"** Harold A. Skaarup,2011-08-12 Major Hal Skaarup has woven together an informative and detailed synopsis of the carefully preserved and restored armoured fighting vehicles on display in Canada. He highlights the importance of these upon key turning points in history when these AFVs were in use as tools of war at home and overseas. We often associate the evolution of military prowess with the advancement of sophisticated technology. Major Skaarup's descriptions of Canadian armour

as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canada's military contribution to safety and security in the world has evolved.

Through its pages you can discover the atmosphere and feeling of the gulf war from the point of view of the Daguet Division The Division Daguet (in french the Daguet is a young brocket deer) was a French Army division formed in September 1990 in Saudi Arabia after the invasion of Kuwait. It was initially formed by elements of the 6th Light Armored Division. On 24 February 1991, when the ground phase begins, the main objective of the division was the As-Salman airfield in Iraq. The Daguet Division and the US 82nd Airborne Division crossed the border and attacked north. The French soldiers encounter some elements of the Iraqi 45th Infantry Division. At the end of the battle, the French Army controlled the objective. The French soldiers captured about 2500 prisoners, and seized a large quantity of weapons. Within a month, the specialized teams of the division which were assigned to the recovery of the Iraqi hardware, managed to capture more than 35 heavy vehicles, a dozen of pieces of AA guns of different calibres and artillery pieces.

*The Arms of the Future* Jack Watling,2023-09-07 From sensor-fuzed munitions and autonomous weapons, to ground moving target indication radar, laser vibrometers and artificial intelligence, the weapons of warfare are undergoing a rapid transformation, with modern technologies reshaping how armies intend to fight in the twenty-first century. The Arms of the Future analyses how the emergence of novel weapons systems is shaping the risks and opportunities on the battlefield. Drawing on extensive practical observation and experimentation, the book unpacks the operational challenges new weapons pose on the battlefield and how armies might be structured to overcome them. At a time when defence spending across NATO is on the rise, and conflict with Russia raises new questions of what it means to fight a truly 'modern' war, Watling examines not just the arms to be employed but how they can be fielded and wielded to survive and prevail in future wars.

*Shooting Down the Stealth Fighter* Mihajlo S. Mijajlovic,Djordje S. Anicic,2022-01-28 A look at the takedown of the presumably invulnerable aircraft during the Kosovo War, featuring perspectives on both sides, plus technical details. With its futuristic and unmistakable design, the Lockheed F-117A Nighthawk, the so-called "Stealth Fighter," was the wonder of the age. Virtually undetectable by radar, this ground-attack aircraft could slip unseen through enemy defenses to deliver its deadly payload on unsuspecting targets. Its effectiveness had been well demonstrated during the Gulf War of 1991, during which the F-117A achieved almost legendary status. But, at 20.42 hours on 27 March 1999, the military and aviation worlds were stunned when the impossible happened—a virtually obsolete Soviet-built surface-to-air missile system which had first been developed more than thirty years earlier, detected and shot down an F-117A, callsign "Vega 31." This incident took place during the NATO bombing of Yugoslavia during the Kosovo War. It was, and remains, at least officially, the only time that a stealth aircraft was detected and shot down by a ground-based missile system. In this book, the authors, both of whom served in the Kosovo War, take the reader through every moment of that astounding event, from both the perspective of Lieutenant Colonel Dani's 3rd Battalion, 250th Air Defense Missile Brigade, a Yugoslav Army unit, and that of the pilot of the F-117A, Lieutenant Colonel Darrell Patrick Zelko, who ejected and survived the loss of his aircraft. The reader is placed in the cabin of the missile fire control center and alongside "Dale" Zelko in the cockpit of his stealth fighter as each second dramatically unfolds. Stealth characteristics are now regarded as a standard part of modern military aircraft design but with each generation of aircraft becoming increasingly, almost cripplingly, expensive to produce and operate compared with the simpler surface-to-air defense systems, the outcome of the battle between missile and stealth hangs in the balance. That this is the case might be seen in the strange fact that it is claimed that two other F-117As did not return to the U.S. at the end of the Kosovo War, though, mysteriously, their fate has never been revealed. Were they too victims of Yugoslav missiles? Though intended for the general reader, *Shooting Down the Stealth Fighter* covers the technical details of the weapons involved and their deployment—and the authors should know, as one of them, Djordje Anicic, was a member of the Yugoslav team which brought down Zelko's aircraft.
