Soviet/Russian Armor and Artillery Design Practices ,1995

Tanks at the Iron Curtain 1960–75 Steven J. Zaloga,2022-07-21 A new analysis of the technology and tanks that faced off against each other on opposite sides of the Iron Curtain, during the very height of the Cold War. From the 1960s onwards, there was a generational shift in tank design and warfare with the advent of CBR (chemical, biological, radiological) protection and a move away from HEAT ammunition to APFSDS. This shift confronted the growing threat of guided anti-tank missiles and saw the introduction of composite armor. Soviet heavy tanks and tank destroyer/assault guns became obsolete, giving way to the technological might of the T-62 and T-64, while NATO forces employed the Chieftain, AMX-30, Leopard I, and M60, plus the initial attempt at a common US-German tank, the MBT-70. Using detailed illustrations and contemporary photographs, this companion volume to NVG 301, *Tanks at the Iron Curtain 1946–60* focuses on key battle tanks and their technology to give a comprehensive overall picture of how tanks developed during modern times.

War Plans and Alliances in the Cold War Vojtech Mastny,Sven S. Holtsmark,Andreas Wenger,2013-04-15 This essential new volume reviews the threat perceptions, military doctrines, and war plans of both the NATO alliance and the Warsaw Pact during the Cold War, as well as the position of the neutrals, from the post-Cold War perspective. Based on previously unknown archival evidence from both East and West, the twelve essays in the book focus on the potential European battlefield rather than the strategic competition between the superpowers. They present conclusions about the nature of the Soviet

threat that could previously only be speculated about and analyze the interaction between military matters and politics in the alliance management on both sides, with implications for the present crisis of the Western alliance. This new book will be of much interest for students of the Cold War, strategic history and international relations history, as well as all military colleges.

Soviet Armoured Cars 1936–45 Jamie Prenatt, 2020-10-29 The armoured car has an important place in the early history of Soviet armoured fighting vehicles (AFVs) – they were the most important AFV during the Russian Civil War and figured prominently in the mechanization of the Red Army that began in late 1929. The 1930s saw the development and production of a wide variety of armoured cars, which were used extensively in Soviet conflicts from then on. They saw service in the Spanish Civil War, in the 1939 Manchurian conflict with Japan, and in the occupation of the Baltic states and the invasion of Poland and Finland. Although many of its armoured cars were lost in the early months following the German invasion in June 1941, Russia continued with its armoured car development program, and the final model, the BA-64, was accepted for service in 1942 with over 9,000 built before production ended in 1946. This detailed book provides a survey of Russian armoured cars from 1936 to 1945, focusing on the history, design, and specifications of the wheeled armoured cars that entered series production, including the rail variants and tracked BA-30. Packed with photographs, cross-sections, and stunning battleplates, this is a comprehensive guide to some of the Red Army's fastest AFVs.

Soviet Cold War Weaponry Anthony Tucker-Jones, 2015-05-20 The T-54, T-62 and T-72 main battle tanks along with the personnel carriers, assault guns, self-propelled guns and anti-tank missiles that are

illustrated in this photographic history represent the high point in the design and manufacture of armoured vehicles by the Soviet Union during the Cold War. Although the superpowers never came to blows, the 'Cold War' was far from cold, as numerous 'hot' proxy wars were fought in Africa and the Middle East, and these conflicts employed the Soviet weaponry that is shown in action in the colour and black-and-white photographs selected for this book. Between the 1950s and 1980s Soviet and Warsaw Pact countries produced thousands of tanks and armoured vehicles ready for the Third World War. They embarked on a technological arms race with the NATO allies in an attempt to counter each new piece of equipment as it appeared in service. Much of this Soviet weaponry has achieved almost iconic status and, despite its age, remains in service with armies, guerrilla forces and terrorist organizations around the world today. It is also of enduring interest to collectors, re-enactors and modellers who are fascinated by the military equipment of the late twentieth century.

The Great Bear at War Chris McNab, 2019-11-28 A History of the Red Army, Soviet Army and Russian Army in 100 Years of Conflict From the chaos of the civil war to the political manoeuvring of the Cold War, Russia's armed forces have shaped the future not only of Russia but of countless other countries around the globe. *The Great Bear at War: The Russian and Soviet Army, 1917–Present* explores the development and struggles of Soviet and Russian armed forces across the numerous conflicts which mark its history. It charts the great historical events that have defined the Red/Russian Army, especially World War II and the Cold War, but also the post-communist insurgencies and wars in which the Russian military has redeveloped its outlook and mission. The post-Soviet development of the Russian military into

a modern force is explored in detail, including its controversial campaigns in Chechnya (1999–2009), Georgia (2008), and Ukraine (from 2014). Sewn into the narrative are details about the equipment, uniforms, training, service conditions and weaponry of the Soviet/Russian soldiers, bringing personal experience and technological context to the broader history. At a time when the world is closely focused upon Russian military behaviour, *The Great Bear at War* is both timely and fascinating.

NATO and Warsaw Pact Armoured Fighting Vehicles of the Cold War Michael Green, 2024-01-30

While tanks were the most recognized armored vehicles during the Cold War, NATO and Warsaw Pact (WP) armies fielded a wide array of armored fighting vehicles (AFVs). These included armored cars, armored personnel carriers (APCs), anti-aircraft vehicles and self propelled artillery. Over the Cold War years nations both progressively developed series of AFVs and introduced entirely new ranges. APCs, vital to all frontline units, evolved from machine gun-armed battlefield taxis such as the US M113 and Soviet BTR-60 series into sophisticated infantry fighting vehicles. The Soviet BMP-1, US Bradley M2/M3, West German Marder and British Warrior and CVR series were classic examples of the latter, with numerous variants. The Soviet BRDM-2 series was the most numerous armored car. The British Army fielded the Saladin, Ferret and Fox and the German Army introduced the eight-wheeled Luchs and tracked SPZ11-2 Kurz. Early anti-aircraft vehicles, such as the American M42 with two 40mm Bofors, were superseded by the formidable Soviet ZSU-23-4 Shilka and the West German Gepard with radar-guided guns. This authoritative and superbly illustrated book covers the full range of AFVs in service with NATO and WP armies over the four decades of the Cold War. It will be an invaluable addition to the libraries of the expert

and layman alike.

Sagger Anti-Tank Missile vs M60 Main Battle Tank Chris McNab, 2018-01-25 The 1973 Yom Kippur War rewrote the textbook on the tactics of modern armored warfare. Unlike the previous major Arab-Israeli war of 1967, the Israeli Defense Forces (IDF) faced an enemy that had invested heavily in modern Soviet weapon systems and tactics. Using detailed colour artwork and insightful analysis, this book explains how the effective use of the Soviet-supplied AT-3 Sagger (9M14 Malyutka) anti-tank missile allowed small Arab tank-killing teams to destroy Israeli armor at an astonishing rate. It also analyses the tank that opposed it, the US-built M60A1, which had to fight for survival against the Arab Saggars, and shows how in both the Sinai and the Golan Heights, the IDF quickly learned that firepower and infantry/artillery cooperation were the keys to their survival.

Infantry Antiaircraft Missiles Steven J. Zaloga, 2023-01-19 Noted authority Steven J. Zaloga charts the development, combat use, and influence of man-portable air defense systems, from the late 1960s to the present day. The first attempts at developing a man-portable air defense system (MANPADS) based around a guided missile began in the mid-1950s, as a response to the increased speed and maneuverability of jet aircraft. This book charts the technological evolution of the MANPADS and explores their combat usage and the lessons from these encounters. Besides detailing the missiles, it also surveys the various methods developed as countermeasures to the MANPADS threat. The first generation of MANPADS, such as the US Army's Redeye and the Soviet Strela-2 (SA-7 Grail), saw combat use in the Vietnam War in 1972 and the Yom Kippur War of 1973. The next generation of infrared-guided MANPADS, such as the US Stinger and

Soviet Igla, came to prominence following the Soviet invasion of Afghanistan in 1979. Since the 1970s, MANPADS have been used in innumerable wars, border conflicts, civil wars and insurrections. Featuring specially commissioned artwork and carefully chosen photographs, this study tells the story of these lethally effective weapons, from their origins to their use today.

The Sovietization of Eastern Europe Balzs Apor, Péter Apor, Rees E. A., 2008-04-21 This essay anthology offers enlightening perspectives on how East-Central Europe was transformed into the “other” Europe during the Cold War era. When the Second World War ended, a new conflict arose between world powers jockeying for supremacy. The Soviet Union pursued a policy of exporting its system of government in a process known as sovietization. But there were also governments that sought to adopt a Soviet way of life on their own accord. Dictated by ideological imperatives, both styles of sovietization employed socialist strategies of state and nation building. This volume not only examines the imposition of new forms of government, but also the socialist response to modernity as reflected in approaches to new technology and management, consumption and leisure patterns, religious and educational policy, political rituals and attitudes to the past. The essays explore the diversity and the tensions within the sovietization process in the countries of the region. “This collection is a bold and timely attempt at shedding light on a rather insufficiently researched topic . . . the diverse approaches-ranging from socio-cultural and economic history to psycho-history.” —Dr. Dragos Petrescu, University of Bucharest.

The Fires of October: The Planned US Invasion of Cuba During the Missile Crisis of 1962 Blaine Pardoe, 2014-03-26 It was the closest we ever came to unleashing the Third World War.... The image of

that world was so horrible to contemplate that both sides stepped away from that precipice and opted for peace. *Fires of October* is the exhilarating military history of the Cuban Missile Crisis exploring in detail the strategic plans implemented by American Armed Forces as they headed towards a catastrophic nuclear collision with Cuba and the USSR. Using recently declassified material, Blaine Pardoe systematically recounts the origins of the crisis, from the Berlin Crisis of 1961 and Cuba's military metamorphosis, to the internal disorganization of the US military, which exacerbated tensions between the USA, Cuba, and the USSR. Pardoe reveals that the invasion plans were based on old intelligence, outdated maps, and misconceptions about the size, strength, and composition of the Soviet forces in Cuba; for the first time, and with harrowing results, he scrutinizes the potential fallout had the invasion gone ahead. Gripping and unnerving, *Fires of October* shows us just how close the world came to nuclear war.

Tools of War Syed Ramsey, 2016-09-01 A weapon, arm, or armament is any device used with intent to inflict damage or harm to living beings, structures, or systems. Weapons are used to increase the efficacy and efficiency of activities such as crime, law enforcement, self-defense, and warfare. In a broader context, weapons may be construed to include anything used to gain a strategic, material or mental advantage over an adversary. While just about any ordinary objects such as sticks, stones, cars, or pencils can be used as weapons, many are expressly designed for the purpose – ranging from simple implements such as clubs, swords and guns, and to complicated modern intercontinental ballistic missiles, biological and cyberweapons. This book has been written keeping in view the requirements of undergraduate and postgraduate students and research scholars in the area of weapons and warfare and Military history.

Soviet Airborne Forces 1930–91 David Campbell, 2020-02-20 Established in 1932, the Vozdushno-desantnye voyska ('air-landing forces', or VDV) of the Red Army led the way in airborne doctrine and practice. Though they were initially handicapped by a lack of infrastructure, due in part to a turbulent political climate in the 1930s, they still conducted major drops during World War II, including at the Dnepr River in September 1943. After the war ended, the VDV became independent of the Air Force and were elevated to the role of strategic asset. The newly rebuilt divisions were now organized and trained to conduct deep insertions behind enemy lines, attacking command-and-control facilities, lines of communication, and key infrastructure targets such as nuclear power plants. This training came into play in numerous Cold War confrontations, including Soviet operations in Hungary (1956) and Czechoslovakia (1968). During the Soviet war in Afghanistan (1979–89), the VDV proved to be the most formidable of the Mujahideen's opponents, with the development of the air assault concept – the transport, insertion and support of air-landed troops by helicopter rather than parachute. This title explores the development of the VDV from their conception in 1930 to their role in the Cold War and in the later invasion of Afghanistan. Supported by contemporary photography and specially commissioned artwork of uniforms and battlescenes, this title is a comprehensive and engaging guide to the history of airborne forces in the Soviet period.

Jane's Intelligence Review, 1994

Inside the Blue Berets Steve Zaloga, 1995 Inside the Blue Berets looks at the origins of the Russian shock troops. It provides an exciting description of the harrowing Russian airborne assaults of World War II

and the combat uses of these troops in the Cold War years as they took on an important new role as imperial storm troopers - the infantry that enforced Soviet power, first in Hungary and later in Czechoslovakia. By then paratroopers had become a true elite, with the best and brightest of the Red Army competing for the prized blue beret. In the 1980s, the VDV became trapped in the quagmire of Afghanistan. Bloodied and weary after ten years of brutal fighting, the paratroopers returned home and were immediately ordered to don their flak jackets and control the civil turmoil resulting from perestroika. Inside the Blue Berets offers the first lucid description of the murky situation that surrounded the breakup of the USSR.

NATO Air-launched Weapons Jeremy Flack, 2002 NATO Air-Launched Weapons is a detailed, illustrated guide to every weapon currently carried by aircraft belonging to NATO. This includes weapons of the traditional Western members, but also more recent members from the former Warsaw Pact, including Czech Republic, Poland and Hungary. NATO plans to rationalize its weapon stocks but at present it boasts a bewildering variety of different weapons and systems. This invaluable book unravels them. Every type of air-launched weapon from bomb and missile to torpedo and rocket is illustrated and described, and its specifications and capability neatly presented in an easy-to-compare format. It will be an invaluable resource for all aircraft enthusiasts, modellers and people interested in the air defense of Europe.

58-K-100 páncélelhárító kézigranát Becz László, 2022-07-30 Az 1950-es évek erőltetett haderőfejlesztésének hevében számos olyan — később megkérdőjelezhető használhatóságú és hatékonyságú

— fegyver, vagy haditechnikai eszköz került rendszeresítésre hazánkban a Magyar Néphadseregben (továbbiakban MN). Számos esetben ezen eszközök már a rendszeresítésének pillanatában elavulttá, vagy csak korlátozottan használhatóvá váltak. Ennek ellenére a HM, HTI és a politikai/katonai vezetés a ,majd csak jó lesz valamire’ égisze alatt mégis a gyártásunk, majd rendszeresítésük mellett döntött. Ennek az átgondolatlanságnak az egyik ékes példája az 1957-ben kifejlesztett, majd 1961-ben rendszerbe állított 58-K-100 típusjelzésű kumulatív ,páncéelhárító’ kézigránát.
