**US Anti-tank Artillery 1941–45** Steven J. Zaloga, 2012-08-20 The US Army's development of the 37mm anti-tank gun began in response to needs identified during the Spanish Civil War. By the time it entered service in Tunisia in 1943, the gun was already obsolete, and the US began the licensed manufacture of the British 6-pdr in the hope of finding a quick solution to its artillery requirements. This in turn proved unequal to the demands of warfare in France in 1944, and further anti-tank measures were developed – rocket propelled grenades for infantry use, and weapons designed specifically for use by the Tank Destroyer Force.

**Allied Artillery of World War Two** Ian V. Hogg, 1998 This comprehensive volume describes the weapons of the Allied forces that were in use from 1939-45. Each of these weapons is described in detail with specifications and a fascinating array of rare photographs and drawings. This well-researched work provides in-depth coverage of all types of artillery used by the Allies, including: coastal and railway artillery, anti-tank, anti-aircraft, field, medium and heavy artillery.

The Anti-Tank Rifle Steven J. Zaloga, 2018-01-25 The emergence of the tank in World War I led to the development of the first infantry weapons to defend against tanks. Anti-tank rifles became commonplace in the inter-war years and in the early campaigns of World War II in Poland and the Battle of France, which saw renewed use in the form of the British .55in Boys anti-tank rifle - also used by the US Marine Corps in the Pacific. The French campaign made it clear that the day of the anti-tank rifle was ending due to the increasing thickness of tank armour. Nevertheless, anti-tank rifles continued to be used by the Soviets on the Eastern Front with two rifles, the 14.5mm PTRS and PTRD, and were still in widespread use in 1945. They served again with Korean and Chinese forces in the Korean War, and some have even appeared in Ukraine in 2014–15. Fully illustrated and drawing upon a range of sources, this is the absorbing story of the anti-tank rifle, the infantryman's anti-armour weapon during the world wars.

*Red Army Weapons of the Second World War* Michael Green, 2022-09-21 While the Red Army's arsenal at the start of the Second World War included weapons dating back to the Great War or earlier, the 1930s' modernization program had introduced the automatic Tokarev pistol and self-loading Tokarev rifle. Its small arms were soon replaced by mass-produced sub-machine guns, such as the PPSH 1941, nicknamed the 'PePeSha'. Supplementing the submachine guns, the Degtyarev Light Machine Gun DP-27. Fitted with a circular pan magazine, it received the not-unsurprising nickname 'Record Player.' New mortars and towed artillery pieces, ranging from 76mm to 203mm, entered service in the pre-war years. In addition to a wide range of towed, self-propelled and anti-tank guns, the Soviets fielded the Katyusha rocket launchers in 1941, nicknamed the 'Stalin's organ' by the Germans. The 1930s saw the introduction of the BT light tank series. The iconic T-34 medium tank series came into service in late 1940, joined by the

IS-2 heavy tank from early 1944, the prefix letters 'IS' translates to Joseph Stalin. These formidable AFVs led the Red Army to victory in May 1945 over Nazi Germany. All these weapons and more are covered with numerous images in this authoritative overview of the subject.

Artillery Warfare, 1939–1945 Simon Forty, Jonathan Forty, 2020-11-25 “From mountain warfare with guns on mules to V2 rockets and everything between makes it well worth a place on anyone’s reference shelf.” —Clash of Steel It is said that artillery won the Second World War for the Allies—that Soviet guns wore down German forces on the Eastern Front, negating their superior tactics and fighting ability, and that the accuracy and intensity of the British and American artillery was a major reason for the success of Allied forces in North Africa from El Alamein, in Italy and Normandy, and played a vital role in the battles of 1944 and 1945. Yet the range of weapons used is often overlooked or taken for granted—which is why this highly illustrated history by Simon and Jonathan Forty is of such value. They stress the importance of artillery on every front and analyze how artillery equipment, training and tactical techniques developed during the conflict. The selection of wartime photographs—many from east European sources—and the extensive quotations from contemporary documents give a graphic impression of how the guns were used on all sides. The photographs emphasize the wide range of pieces employed as field, antiaircraft and antitank artillery without forgetting self-propelled guns, coastal and other heavyweights and the development of rockets. The authors offer a fascinating insight into the weapons that served in the artillery over seventy years ago. “Superbly illustrated, this is testament to the courage and skills of extraordinary men in the execution of their duty. An amazing book.” —Books Monthly

**The Military Balance 2023** The International Institute for Strategic Studies (IISS), 2023-02-15 The Military Balance has been published annually since 1959. The 2023 edition provides an open-source assessment of the armed forces and equipment inventories of 173 countries, with accompanying defence economics data. Alongside detailed country data, The Military Balance assesses important military issues, region-by-region, and includes graphics to illustrate these as well as noteworthy equipment developments. Maps this year include a focus on Russia’s full-scale invasion of Ukraine and select China-Russia military cooperation activities. The book draws on the range of data carried in the Military Balance+ online database, particularly the procurement features in each regional section. The accompanying wallchart explores the military use of outer space, an increasingly important element of defence capabilities, focusing on China, Russia and the United States. For those involved in defence and security policymaking, analysis and

research, The Military Balance is an indispensable source.
