Description and Operating Instructions for a 7-channel Telemetry System for Physiological Temperatures and the Electrocardiogram David A. Ratino,Adolph R. Marko,William C. Kaufman,1968 Previous telemetry designs were improved to produce a system specific to the physiological evaluation of the thermal adequacy of space suits. A small seven-channel pulse duration multiplexed telemetry system which transmits an electrocardiogram, rectal temperature with an accuracy better than + or - 0.05C, and five skin temperatures with an accuracy better than + or - 0.2C was constructed. The entire unit is enclosed in a 13 by 10 by 5 cm box worn under the space suit. Components that have become available since construction could reduce this size to one-fifth without sacrificing performance. Three mercury batteries (12 v) power the equipment for 40 hours and provide reliable reception at distances of 90 m. The system is activated by connecting the sensor harness, and the output is checked and calibrated by a 3-position switch. The unit has been tested during exercise studies in space suits and during metabolic experiments on men exercising in cold environments. It provided reliable transmission of accurate temperature and heart rate data for both laboratory and field studies. It has simplified experimental procedures by eliminating all complications of hard wire leads penetrating pressure shells in space suits and by completely freeing the subject in field studies. A-7 Corsair Pilot's Flight Operating Manual United States Navy,2008-09-01 ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq.

The last planes in U.S inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified 'restricted', the manual was recently declassified and is here reprinted in book form.

Evaluation of Critical Sting Length on a 7-deg Cone as Determined by Measurements of Dynamic Stability Derivatives and Base Pressure for Mach Numbers 0.2 Through 1.3 Frederick B. Cyran, Bob L. Uselton, Edward J. Marquart, 1981 Wind tunnel tests were conducted to provide sting-support interference information for planning and directing wind tunnel tests at subsonic and transonic Mach numbers. Sting-length effects on dynamic stability derivatives, static pitching moment, and base pressure of a blunt, flat-base 7- deg cone were investigated at Mach numbers 0.2 to 1.3 in the Arnold Engineering Development Center (AEDC) Propulsion Wind Tunnel Facility (PWT). Two frequencies of oscillation, nominally 5.3 and 2.9 Hz, were investigated. The boundary-layer state at the model base was turbulent for all Mach numbers greater than 0.2. The interference effects of two types of model-wake splitter plates were also investigated. The results showed that the critical sting length depended on the Mach number, angle of attack, and type of data used as the interference indicator. A critical sting length of three model diameters was determined to be suitable for all test conditions for the ratio of sting-diameter-to-model-base- diameter (0.22) for this test.
