La ocupación cazadora-recolectora durante la transición Pleistoceno-Holoceno en el oeste de Rio Grande do Sul - Brasil: geoarqueología de los sitios en la formación sedimentaria Touro Passo Viviane Pouey

Vidal,2018-07-13 This book presents the results obtained during geoarchaeological studies carried out in the locality of Touro Passo, Brazil. New chronologies obtained represent a scientific advance for the study of hunter-gatherer occupations during the Late Pleistocene-Early Holocene in the triple border of Brazil, Argentina and Uruguay.

Outil de suivi de la mise en œuvre de l'approche écosystémique des pêches

Organisation des Nations Unies pour l'alimentation et

l'agriculture,2021-12-30 La mise en œuvre d'une approche écosystémique des pêches (AEP) contribue à la durabilité des pêches de diverses manières. Le Programme EAF-Nansen a aidé plusieurs pays à comprendre, adopter et utiliser une approche écosystémique dans la gestion de leurs pêcheries marines et côtières. L'outil de suivi de la mise en oeuvre de l'AEP est un outil d'aide à la décision et à la planification du processus de gestion des pêches. Il peut être utilisé par les pays dans le cadre des processus de planification

stratégique et opérationnelle de leurs pêcheries, les aidant à déterminer les domaines où ils font des progrès et ceux où il reste des lacunes et des difficultés à résoudre.

Eosinophilic Lung Diseases Michael E. Wechsler,2022-01-01 A great deal of knowledge about eosinophilic lung diseases has been gained in the last few years, but unanswered questions concerning eosinophil biology still remain. It is in this context that this Monograph was developed. Broad in scope, the book bases its approach to the management of eosinophilic lung diseases on a fundamental understanding of eosinophil biology in health and disease. State-of-the-art reviews written by world-leading authorities and up-and-coming stars in the field take the reader on a journey through the different eosinophilic lung diseases. This Monograph will ensure the practicing clinician is better equipped to recognise and treat patients with eosinophilia, as well as appreciate the advances coming in the near future.

Classification Syntaxique des Constructions Adjectivales en Coréen Nam Jee-Sun,1996-10-18 The purpose of this study is the systematic description of a set of data called Adjectives in Korean, which reduces to a minimum

theoretical preoccupations and abstract formalisations with no practical applications. The framework of our research is the Lexicon-grammar, whose fundamental idea is that the minimal meaningful unit is the simple sentence and not an isolated word. This work is constituted as follows: given that the corpus extracted from current dictionaries is insufficient for our purpose, we will reconstitute a complete corpus: first, with a formal definition, and then according to some other principles discussed in the first section. With this more complete corpus (5300 items), we will examine in the second section general syntactic properties of adjectival constructions. The third section is devoted to the description of 15 classes of adjectival structures. These syntactic classes will be represented in the form of tables in the annex. The results obtained in this work are indispensable at least for the following activities: first, the elaboration or verification of a linguistic theory demands a priori examination and systematic description of empirical data; furthermore, a syntactic description of lexical data, which is as exhaustive as possible, has a particular interest in the perspective of the elaboration of a lexicon suitable for computer processing of natural language. L'objectif de cette étude est la description systématique d'un ensemble de données dit Adjectifs en coréen, en réduisant au minimum les préoccupations théoriques et les formalisations abstraites et éloignées des faits. Notre démarche s'inscrit dans le cadre du Lexique-grammaire, dont l'idée fondamentale est que l'unité minimale de sens est la phrase simple et non le mot isolé. Ce

travail est constitué de la manière suivante: étant donné que le corpus extrait des dictionnaires actuels est insuffisant pour notre objectif, on reconstituera un corpus complet: d'abord avec une définition formelle, et ensuite selon certains autres principes dont nous parlerons dans la première partie; une fois ce corpus constitué (5300 items), on examinera dans la deuxième partie, les propriétés syntaxiques générales des constructions adjectivales; la troisième partie est consacrée à décrire 15 classes de structures adjectivales. Ces classes syntaxiques se présentent sous la forme des tables dans l'annexe. Les résultats que nous avons obtenus dans ce travail sont indispensables au moins pour les deux activités suivantes: d'abord, une élaboration ou une vérification d'une théorie linguistique exige préalablement l'examen et la description systématique de données empiriques; par ailleurs, une description syntaxique des données lexicales, aussi exhaustive que possible, a un intérêt particulier dans la perspective de l'élaboration d'un lexique adéquat au traitement informatique du langage naturel.

Biochemical and Clinical Aspects of Neuropeptides Synthesis, Processing, and Gene Structure Gebhard Koch, 2012-12-02 Biochemical and Clinical Aspects of Neuropeptides: Synthesis, Processing, and Gene Structure covers the proceedings of the Fifth Conference on Macromolecular Synthesis: Biochemical and Clinical Aspects of Neuropeptides, held in Blankenese, Hamburg, Germany. This book is composed of seven parts encompassing 23 chapters, and begins

with an introduction of the proteolytic mechanisms involved in proprotein processing, their intracellular localization, and their roles in generating a diverse assortment of secreted products in a variety of neuroendocrine cells. Part I describes the structure, synthesis, biochemical aspects, gene expression, and receptor selectivity of opioid peptides. Parts II and III focus on the isolation, structure, function, and genetic linkage of neuropeptides. The remaining parts explore the posttranslational processing, regulation, metabolism, biosynthesis, and gene expression of these neuropeptides, with a particular emphasis on their triggering mechanism and the control of release. Biochemists, neurologists, geneticists, and clinicians will greatly appreciate this book.

Mass Action in the Nervous System Gerard Meurant, 2012-12-02 Mass Action in the Nervous System: Examination of the Neurophysiological Basis of Adaptive Behavior through the EEG focuses on the neural mechanisms and the behavioral significance of the electroencephalogram, with emphasis on observations made on the mammalian olfactory system. Organized into seven chapters, this book begins with a brief nonmathematical review of the concept of the neuron and the interrelations among neurons that lead to the formation of interactive masses. Some chapters follow on the linear properties of neurons and their parts; the ionic hypothesis; the nonlinear input-output relations of neurons in masses expressed in terms of amplitude-dependent coefficients in linear differential equations; and the relations between the states of activity of

neurons. Subsequent chapters describe the properties resulting from feedback within neural masses; the effects of the nonlinearities in the input-output relations of neurons on the behavior of masses; and some inferences concerning the mechanisms of neural signal processing at the level of neural masses. The book is a model for an advanced text in neurophysiology, and some understanding is assumed of the elements of the fields of linear analysis, probability, statistics, theory of potential, neuroanatomy, electrophysiology, neuropharmacology, and experimental psychology.

Scheduling for Parallel Processing Maciej Drozdowski, 2010-03-14 Overview and Goals This book is dedicated to scheduling for parallel processing. Presenting a research field as broad as this one poses considerable difficulties. Scheduling for parallel computing is an interdisciplinary subject joining many fields of science and technology. Thus, to understand the

scheduling problems and the methods of solving them it is necessary to know the limitations in related areas. Another difficulty is that the subject of scheduling parallel computations is immense. Even simple search in bibliographical databases reveals thousands of publications on this topic. The diversity in understanding scheduling problems is so great that it seems impossible to juxtapose them in one scheduling taxonomy. Therefore, most of the papers on scheduling for parallel processing refer to one scheduling problem resulting from one way of perceiving the reality. Only a few publications attempt to arrange this field of knowledge systematically. In this book we will follow two guidelines. One guideline is a distinction between scheduling models which comprise a set of scheduling problems solved by dedicated algorithms. Thus, the aim of this book is to present scheduling models for parallel processing, problems defined on the grounds of certain scheduling models, and algorithms solving the scheduling problems. Most of the scheduling problems are combinatorial in nature. Therefore, the second guideline is the methodology of computational complexity theory. In this book we present four examples of scheduling models. We will go deep into the models, problems, and algorithms so that after acquiring some understanding of them we will attempt to draw conclusions on their mutual relationships.
