Ultra-Large Aircraft, 1940-1970 William Patrick Dean,2018-04-04 In 1962, a unique transport aircraft was built from the parts of 27 Boeing B-377 airliners to provide NASA a means of transporting rocket boosters. With an interior the size of a gymnasium, “The Pregnant Guppy” was the first of six enormous cargo planes built by Aero Spacelines and two built by Union de Transport Aeriens. More than half a century later, the last Super Guppy is still in active service with NASA and the design concept has been applied to next-generation transports. This comprehensive history of expanded fuselage aircraft begins in the 1940s with the military’s need for a long-range transport. The author examines the development of competing designs by Boeing, Convair and Douglas, and the many challenges and catastrophic failures. Behind-the-scenes maneuvers of financiers, corporate raiders, mobsters and other nefarious characters provide an inside look at aviation development from the drawing board to the scrap yard.

Special Task Aircraft Phyllis Raybin Emert,1990 Describes the specifications and uses of various airplanes designed for specific tasks, including the Northrop YB-49 Flying Wing, Aero Spacelines Super Guppy, and Bell/Boeing V-22 Osprey.

Weird and Wonderful Aircraft Paul E. Eden,2006-12-30 Introduces a variety of experimental aircraft, including those with round wings, moveable wings, or no wings at all.

A Century of Aerospace History C. Wayne Ottinger,2023-09-26 The post-flight reports from each of the six Apollo missions regarding the success of a one-time attempt to land on the Moon confirmed in the opinion of each of the Commanders (pilots) that the LLRV was absolutely mandatory to train a human pilot to land a vehicle (the LM) of the Apollo era successfully on the lunar surface. Wayne Ottinger and his colleagues at FRC had created a marvelous flying machine called the Lunar Landing Training Vehicle, a unique machine that gave us the confidence and capabilities to ensure the Apollo Lunar Module never failed in landing at six different and unknown locations on the Moon. This remarkable book tells the full story of how they did it—Apollo will be ever thankful for their inspiration and innovation, a true milestone in the history of human flight. David R. Scott Commander, Apollo 15 March 3, 2023

Boeing Model 377 Stratocruiser Robert Hewson,2001 The first of a new series that looks at classic postwar airliners. This volume charts the evolution and design of the Boeing Model 377, the statesmanlike Stratocruiser. It includes technical specifications, the plane's production and service career and complete details of its operators.

365 Aircraft You Must Fly Robert F. Dorr,2015-07-07 A fascinating, entertaining, and amusing plane-by-plane journey through aviation history. Aviation has come a long way since the Wright Brothers built their glider in Kitty Hawk, North Carolina, in 1903. From among the thousands of different types of military and commercial aircraft constructed over the past 100 years , aviation expert Robert F. Dorr profiles the most important, fascinating, and famous aircraft ever made. Your opinions might differ, but you wouldn't want to miss out on the planes Dorr identifies as flights of a lifetime. The book covers 365 of the most iconic aircraft in world history that enthusiasts, serious-minded hobbyists, and casual fans would love to fly if given the chance. Clear photography, historical context, and specs get you as close as possible to these planes without setting foot in a hangar. While covering every era of aviation history, many of the planes in 365 Aircraft You Must Fly were flown during World War II, a time unmatched in aviation for its technological advances, romance, and clarity of purpose. During this golden age of flying, propellers gave way to jet engines, and the Greatest Generation fought gallantly in them. Explore the history, thrills, and joy of flying the world's most amazing 365 aircraft.

The Airbus A380 Graham Simons,2014-08-13 Every 7 minutes, an A380 takes off or lands somewhere in the world...??The Airbus was initially designed and developed in order to provide a contender to the Boeing's growing monopoly of the skies in the biggest large-aircraft market in the world. Ambitious in design, the undertaking seemed mammoth. Yet scores of aviation engineers and pilots worked to get the design off the ground and the Airbus in our skies. This double-decker, wide-body, 4 engine jet airliner promised to redefine expectations when it came to commercial flight. Five years on from its launch, Graham Simons provides us with this, an impressively illustrated narrative history of the craft, its achievements, and the legacy it looks set to provide to a new generation of aviation engineers, enthusiasts and passengers.??Operated by airlines such as Emirates, Singapore Airlines, Quantas and Lufthansa, the story of the A380 could be said to represent the story of modern-day travel itself, characterised by major technological advances across the world that constantly push the boundaries of expectation. ??Sure to appeal broadly across the market, this is very much a commemorative volume, preserving the history of this iconic craft in words and images.

Contrails over the Mojave George J Marrett,2014-07-15 In Contrails over the Mojave George Marrett takes off where Tom Wolfe’s The Right Stuff ended in 1963. Marrett started the Air Force Test Pilot School at Edwards AFB only two weeks after the school’s commander, Col. Chuck Yeager, ejected from a Lockheed NF-104 trying to set a world altitude record. He describes life as a space cadet experiencing 15 Gs in a human centrifuge, zero-G maneuvers in a KC-135 “Vomit Comet,” and a flight to 80,000 feet in the F-104A Starfighter. After graduating from Yeager’s “Charm School,” he was assigned to the Fighter Branch of Flight Test Operations, where he flew the latest fighter aircraft and chased other test aircraft as they set world speed and altitude records. Marrett takes readers into the cockpit as he “goes vertical” in a T-38 Talon, completes high-G maneuvers in an F-4C Phantom, and conducts wet-runway landing tests in the accident-prone F-111A Aardvark. He writes about Col. “Silver Fox” Stephens setting a world speed record in the YF-12 Blackbird and Bob Gilliland testing speed stalls in the SR-71 spy plane, but he also relives stories of crashes that killed test pilot friends. He recounts dead-sticking a T-38 to a landing on Rogers Dry Lake after a twin-engine failure and conducting dangerous tail hook barrier testing in a fighter jet without a canopy. A mysterious UFO sighting in the night sky above the Mojave Desert, known as “The Edwards Encounter,” also receives Marrett’s attention. Whether the author is assessing a new aircraft’s performance or describing the experiences of test pilots as they routinely faced the possibility of death, this look at the golden age of flight testing both thrills and informs.

Aerospace Actuators 2 Jean-Charles Maré,2017-04-24 This book is the second in a series of volumes which cover the topic of aerospace actuators following a systems-based approach. This second volume brings an original, functional and architectural vision to more electric aerospace actuators. The aspects of signal (Signal-by-Wire) and power (Power-by-Wire) are treated from the point of view of needs, their evolution throughout history, and operational solutions that are in service or in development. This volume is based on an extensive bibliography, numerous supporting examples and orders of magnitude which refer to flight controls and landing gear for various aircraft (fixed or rotorwing, launchers) in commercial, private and military applications. The topics covered in this set of books constitute a significant source of information for individuals and engineers from a variety of disciplines, seeking to learn more about aerospace actuation systems and

components.

Patrick Air Force Base Roger McCormick,2016-12-12 The search began in 1946 for a location to conduct long-range missile tests. Cape Canaveral was chosen in part due to a nearby deactivated military base that could support a long-range proving ground for test firing missiles. The base, originally known as Banana River Naval Air Station, was eventually renamed Patrick Air Force Base in honor of a distinguished Army general. Today, Patrick is part of Air Force Space Command, and it is operated by the 45th Space Wing that also oversees launch facilities at nearby Cape Canaveral Air Force Station with the vision of “World’s Premier Gateway to Space.”

100 Years of Civil Aviation Ben Skipper,2023-11-15 An examination of civil aviation history from the end of World War I to the retiring of the Jumbo Jet. The book examines a century of civil aviation; in 1919 a fledgling industry was born out of civilianizing First World War bombers. The book covers the design and development of civil aircraft and all the personalities that shaped the industry; it features the hay-day of air travel before the advent of mass passenger transit, and the rise of smaller, austerity airlines. It covers the influence of military aircraft on civil planes, unpacks the laws that govern civil aviation and how they have changed over the past century. It chronicles air disasters, both mechanical and tyrannical, and for the first time, looks at the role of women in civil aviation. Playing its part in times of crisis, civil aviation has led rescue missions and covert operations; civilian pilots were often used to test and transport new aircraft from their manufacturers to the frontline, often unarmed and unescorted. The book ends with the quiet retirement of an icon, amid a global pandemic and what lies in store for a greener flying future.
