The Science of Floating and Boating M. Schottenbauer, 2014-05-11 Learn about the Physics of Water and Oars! Translational Motion, Rotational Motion, & Harmonic Oscillation! In this book, readers gain access to real scientific data pertaining to the science of floating and boating, promoting graph-reading, comparison, contrast, and calculation skills. Graphs show data from the following scientific instruments: Video Analysis This book allows readers to analyze real data without purchasing expensive lab equipment. Graphs show data collected from a ping pong ball floating in containers and natural waterway. In a series of graphs, the ping pong ball is dropped, submerged, and allowed to float, and its motion tracked. Additional graphs also show the motion of oars and paddles, including rowboat-style oars and a kayak paddle. These data can be used for lesson plans by teachers and parents.

Sustaining Seas Elspeth Probyn, Kate Johnston, Nancy Lee, 2020-04-21 Why read *Sustaining Seas*? It is as simple as this: the seas sustain all life. This edited book emerges from conversations across several disciplines, and including practitioners of different specialities (artists, writers, planners, policy makers) about how to sustain the seas, as they sustain us. *Sustaining Seas: Oceanic space and the politics of care* aims to build a better understanding of what it means to care for aquatic places and their biocultural communities. The book is truly interdisciplinary and brings together a wide range of authors including, academics from diverse fields (architecture, science, cultural studies, law), artists, fisheries managers, and Indigenous Traditional Owners. It provides readers with new theoretical framings, as well as grounded case studies with a wide geographical and cultural breadth. This book assumes that understanding complexity, including social, cultural, ecological and economic interconnections, is crucial to any solution. Sustaining the seas is one of the most pressing global challenges for the planet and all her inhabitants. How to do justice to this challenge is an exigency for all scholars, and how to represent the oceans is a guiding theme in the book that is addressed by scholars, artists, and practitioners.

Expanded Practice: Höweler + Yoon Architecture/My Studio J. Meejin Yoon, Eric

Höweler, 2009-07-14 Rising stars in Boston's design scene, architects Eric Höweler and J. Meejin Yoon have in a single decade developed a reputation for radical experiments in architectural form. Their design methodology--what they call an expanded practice--combines intense research with

interdisciplinary experimentation. Howeler and Yoon's sensational, competition-winning lighting entry for the 2004 Athens Olympics exemplifies their fearless approach: without any prior experience in public space interactive design, the firm constructed a luminous, interactive soundscape installation at the base of the Acropolis. White Noise White Light featured a field of semiflexible fiber-optic strands that emitted white light and white noise in response to the movement of pedestrians. The project, an enormous success, enchanted a multitude of visitors who moved amidst the cilia of light. Expanded Practice presents twenty-nine recent projects by this young firm encompassing a broad range of scales and media. The projects, divided into distinct but often overlapping research themes, include a museum courtyard program inspired by the Voronoi cell-packing algorithm (PS1 Loop); an outdoor light installation featuring hovering cones that capture and interact with solar energy, rainwater, and sound (Hover); a garment designed to turn inside out as it unravels (Mobius Dress); and a landscape design that weaves technology and texture into an integrated and interactive landscape (Tripanel). Packed with drawings, diagrams, and photographs of each project's design process, Expanded Practice provides an inspirational look into one of the most exciting young firms working in architecture today.

Giant Telescopes W. Patrick McCray,2006-04-30 Every night, astronomers use a new generation of giant telescopes at observatories around the world to study phenomena at the forefront of science. By focusing on the history of the Gemini ObservatoryÑtwin 8-meter telescopes located on mountain peaks in Hawaii and ChileÑGiant Telescopes tells the story behind the planning and construction of modern scientific tools, offering a detailed view of the technological and political transformation of astronomy in the postwar era. Drawing on interviews with participants and archival documents, W. Patrick McCray describes the ambitions and machinations of prominent astronomers, engineers, funding patrons, and politicians in their effort to construct a modern facility for cutting-edge

science—and to establish a model for international cooperation in the coming era of Òmegascience.Ó His account details the technological, institutional, cultural, and financial challenges that scientists faced while planning and building a new generation of giant telescopes. Besides exploring how and why scientists embraced the promise and potential of new technologies, he considers how these new tools affected what it means to be an astronomer. McCrayÕs book should interest anyone who desires a deeper understanding of the science, technology, and politics behind finding our place in the universe.

Managing the Climate Crisis Jonathan Barnett,Matthijs Bouw,2022-07-14 Natural disasters from heat waves to coastal and river flooding will inevitably become worse because of greenhouse gases already in the atmosphere. Managing them is possible, but planners, designers, and policymakers need to advance adaptation and preventative measures now. *Managing the Climate Crisis: Designing and Building for Floods, Heat, Drought and Wildfire* by design and planning experts Jonathan Barnett and Matthijs Bouw is a practical guide to addressing this urgent national security problem. Barnett and Bouw draw from the latest scientific findings and include many recent, real-world examples to illustrate how to manage seven climate-related threats: flooding along coastlines, river flooding, flash floods from extreme rain events, drought, wildfire, long periods of high heat, and food shortages.

50 Ways to More Calm, Less Stress Megy Karydes,2023-12-26 Touch, taste, smell, hear, and see your way to better self-care and mental well-being. Let's face it: We all feel stress. Deep breathing, meditation, and yoga only go so far, and not being able to sit still and be alone with our thoughts isn't that unusual. The mind is designed to engage with the world around us, and there is no one-size-fits-all approach to finding what calms us because we are so unique in our circumstances, our lifestyles, our finances, and our interests. *50 Ways to More Calm, Less Stress* explores different ways each of our five senses can help bring more calm and less stress into our lives. Whether through touch, sight, taste, smell, or sound, each activity includes research or science-backed studies that support why it offers health and wellness benefits as well as ways you can incorporate them into your own life. The best part—most of the activities are either low or no cost and can be done inside your own home or right outside your door. Activities include: The magic of gardening Losing yourself while doodling

TIME Mental Health The Editors of TIME, 2018-10-12 People at all stages of life experience mental illness, including anxiety and depression. There has never been a better understanding of how the right support, lifestyle and approach can begin to crack the code and lead toward better health. Now, in a new Special Edition, *Mental Health: A New Understanding*, the editors of TIME take a look at the vast world of mental health from understanding the causes and symptoms of mental disorders to feeling better, including the power of exercise, why your pets are good for your mental health, and the benefits of pharmaceutical aides, therapy and other ways to alleviate pain. There is also guidance on how to help a friend or loved one who is suffering from mental illness and understanding life as an addict. Additionally, we look at suicide, depression amongst college-age children and why the loneliness epidemic should be taken very seriously. *Mental Health* is an excellent primer on understanding our own minds.

Software Goes to School David N. Perkins, 1995 As American students confront the multiple challenges of standardized tests, international comparisons, and drop-out pressures, educators and policy makers are seeking bold new teaching approaches with increasing urgency. One such approach - the introduction of innovative computer technologies into the classroom - has met with enthusiasm among students and instructors alike. *Software Goes to School* brings together leading experts to offer an in-depth examination of how computer technology can play an invaluable part in educational efforts through its unique capacities to support the development of students' understanding of difficult concepts. Focusing on three broad themes - the nature of understanding, the potential of technology in the classroom, and the transformation of educational theory into practice - the contributors discuss a wealth of subjects central to any efforts that intend to improve our schools. Topics range from the difficulties students encounter when learning new ideas (especially in science and mathematics), to how the right software allows for hands-on manipulation of abstract concepts, to the social realities of

the educational environment. Lively and engaging, the book is must reading for students, researchers, and professionals in educational psychology, developmental psychology, software design, and for others who hope to see new technologies have a positive impact on our schools.
