AWACS and Hawkeyes Leigh Armistead,Edwin Leigh Armistead,2002-01 This book features a complete history of airborne early warning aircraft (AWACs) and includes photographs and diagrams detailing airborne radar technology.

Airborne Early Warning David Baker,1989 Describes how radar and other air surveillance techniques, such as airborne warning and control devices, are used to watch the skies to determine what the enemy is doing.

Airborne Early Warning System Concepts Maurice W. Long,2004-06-30 This comprehensive discussion of airborne early warning (AEW) system concepts encompasses a wide range of issues, including capabilities and limitations, developmental trends and opportunities for improvement.

Airborne Early Warning Radar William C. Morchin,1990 The first chapters introduce the subject and define the nature of the targets that radar is expected to detect and track and the natural environment--the atmosphere and clutter with which radar must deal. Subsequent chapters are devoted to the analysis and design formulation of airborne early warning radars. Emphasis is on information appropriate to radar bands that are conventionally used or considered for long-range surveillance. Annotation copyrighted by Book News, Inc., Portland, OR

Beyond the Horizon Ian Shaw,Sergio Santana,2014 The primary purpose of this book is to provide a complete and unbiased account of the early history and development of AEW aircraft and their systems without baffling the reader with scientific and technical jargon. All nations that have been involved in AEW developments are covered comprehensively.--Introduction, P.6.

Airborne Early Warning Aircraft Chris Gibson,2023-12-30 Airborne early warning (AEW) has been used since 1941 but, until the computer revolution of the late 1970s, was restricted in its operation to maritime use. Since the 1980s, AEW aircraft have become the must-have force multiplier of any first-rate armed force and as such are worthy of analysis. From the RAF's Wellington ACI of 1941 and the Elgar operations of 1944 to the Boeing E-7 Wedgetails that will enter service next year, the UK has paved the way in AEW technology, albeit not with the greatest success. The Americans, following Britain's lead and taking a hammering from the kamikaze, modified a snorkel-detection radar to detect aircraft and developed the first operational bespoke AEW aircraft with Project Cadillac. That radar would remain in service on the RAF's Shackleton AEW2 until 1991 when it was replaced by the Boeing E-3D Sentry AEW1 in RAF Service. In the intervening period, many attempts to produce an AEW system for use over land failed, until the E-3

Sentry came on the scene in the late 1970s. This became the benchmark for AEW aircraft and is only now being replaced by Boeings E-7 Wedgetail. On the maritime front, Grumman's E-2 Hawkeye became a popular choice, especially once an overland capability was achieved in the 1980s. The Royal Navy's loss of ships in the South Atlantic prompted the resurrection of earlier work on a helicopter AEW system that became the Sea King ASaC7 and today's Merlin Crowsnest operated from the Queen Elizabeth-class aircraft carriers.

Elsewhere, the Soviets produced the Moss, based on the Tupolev Bear via the Cleat airliner but the subsequent Beriev A-50 Mainstay has become the AEW platform of choice in non-aligned countries such as India. China has taken the bit between its teeth and having bought a few Mainstays, has developed a plethora of AEW aircraft in the last 20 years. Due to the massive power requirements of radars and their associated computers, AEW aircraft were large, generally converted airliners. Since the mid-1990s a new generation of smaller types based on feeder liners and bizjets have appeared and make the role accessible to smaller air forces. In the vanguard of this is SAAB, whose Erieye systems have been applied to a variety of aircraft.

From Guam and Beyond Richard (Dick) Leighton, Dan Ragan, Floyd E. Horn, Jr., David R. Seibert, Antonio Apap, Norman S. Bull, 2018-07-10 The stories in this book were supplied by squadron mates who served with the U.S. Navy's Airborne Early Warning Squadron One or VW-1, a squadron that supported the Seventh Fleet and also engaged in typhoon tracking. The squadron's existence spanned a nearly 20 year period that began with the Korean War and ended with the Vietnam War. This collection is titled "From Guam and Beyond" because the squadron was stationed on Guam but it also includes the authors' experiences as they were stationed at or came in contact with populations at other sites in the Western Pacific, ranging from Yap in the Caroline Islands to Japan, Okinawa, the Philippines and Vietnam.

The Vulnerability of an Airborne Early Warning (AEW) System Against Stand-off Noise Jamming (SOJ) Chih-cheng Lo, 1996-09-01 Based on the lessons learned from the Falkland War, an airborne early warning (AEW) system's importance is fully appreciated, and many countries field the AEW system to be a force multiplier for their air defense system In this thesis, the AEW system's vulnerability, the sensitivity of each factor dominating the AEW system's defection range under hostile jamming, and the effect of standoff noise jamming (SOJ) impacting the AEW system's detection range are evaluated using a simulation model to explore the AEW system's susceptibility and detection range degradation in a realistic combat environment.

Knowledge Based Systems as a Means of Managing Aspects of Datalink Within a Decision Support System for Naval Airborne Early Warning, 2000 The future airborne early warning aircraft to be operated by the Royal Navy will consist of an advanced radar driven mission system that will include a datalink: this Datalink, as well as advanced sensors and an expanded role, will impose additional work on the aircrew that operate in the rear of the airborne early warning (AEW) aircraft. Operating the existing mission system is, under certain conditions, considered by AEW aircrew to be at the upper limits of

tolerable workload. The deluge of information from these advanced sensor systems and datalink is likely to impact on the aircrew performance and hence overall system performance. The KBS group of the Defense, Evaluation and Research Agency (DERA) in Farnborough, UK, has been developing Knowledge Based Systems for Decision Support for over a decade. This experience has been applied to the AEW domain with a high degree of success as demonstrated in a laboratory based concept demonstrator. However, previous work had not accounted for the impacts of the AEW aircraft operating within a digitized battlespace. This paper describes part of a project that was aimed at examining the implications of digitization on the future AEW aircraft and how that would impact the Knowledge Based Decision aids currently being developed. Specifically, the project assessed how datalink would be used and how the information conveyed over datalink could help the aircrew's decisions through greater situation awareness.
