The text provides an introduction to both the basics of finance and the particular intricacies of airline finance where there can be significant fluctuations in both revenues and costs. This new edition also includes: capital budgeting management of current assets financial risk analysis fuel hedging aircraft leasing This textbook contains chapters that cover unique aspects of the aviation financial decision-making process. These include a rigorous and structured presentation of the buy versus lease decision that is prevalent in the industry, a valuation process for aviation assets, the recent trend toward privatization and the difficulty inherent in the valuation of a publicly-owned or semi-publicly owned asset. The Foundations of Airline Finance, now in its second edition, is an introductory text that can be used either as a general financial text or in a specialized class that deals with aviation finance in particular.

The Low Cost Carrier Worldwide Sven Gross,Michael Lück,2016-02-17 Low Cost Carriers (LCCs) have become an integral part of today's air transport and tourism industries. Originating in the United States, the low-cost concept has subsequently been adopted by airlines on all continents. LCCs in Europe and North America, and to some extent in Asia, have already been well covered by academic literature. However, scientific publications on the topic of LCCs in Africa, Latin America, the Middle East, Australia and New Zealand are scarce. This volume provides the first comprehensive overview of developments, the legal framework and the current situation of the low-cost carrier phenomenon across the globe. It contains a dozen chapters, each dedicated to a region, all written by highly experienced and renowned experts from around the world. The Low Cost Carrier Worldwide is written primarily for upper-level undergraduate and postgraduate students, as well as researchers and practitioners within the fields of aviation, transport and tourism.

Flying Off Course IV Rigas Doganis,2009-12-18 The airline industry presents an enigma. High growth rates in recent decades have produced only marginal profitability. This book sets out to explain, in clear and simple terms, why this should be so. It provides a unique insight into the economics and marketing of international airlines. Flying Off Course has established itself over the years as the indispensable guide to the inner workings of this exciting industry. This enlarged fourth edition, largely re-written and completely updated, takes into account the sweeping changes which have affected airlines in recent years. It includes much new material on many key topics such as airline costs, 'open skies' , air cargo economics, charters and new trends in airline pricing. It also contains two exciting new chapters on the economics of the low-cost no frills carriers and on the future prospects of the industry. The book provides a practical insight into key aspects of airline operations, planning and marketing within the conceptual framework of economics . It is given added force by the author's hands-on former experiences as a Chairman and CEO of Olympic Airways and as a non-executive Director of South African Airways while he is currently a non-executive Director of easyJet.

Airline Microeconomics Tony Webber,2022-07-25 This book presents readers with a technical tool-kit to understand the economics of airlines. It starts by covering the key language and glossary of the air travel business, which is necessary for graduates or first-time employees in aviation to understand the content of conversations, meetings, presentations and internal aviation communications. It then breaks down the complexity of the demand side of the air travel business. The book then analyses revenue over two distinct time horizons, specifically the short and medium runs, recognising the fact that airlines operate to a fixed number of seats over a short horizon because of the way that they schedule services in advance of departure. By combining revenue and costs, the book then analyses airline profit, with a focus on the short run and medium run decision variables that maximise airline profit. The remainder of the book analyses various important topics in air transport economics, including competition in airline markets, key rules, regulations and taxes that affect the return on capital in aviation, the way that airlines form relationships, and the economics of the market for oil and jet fuel, among others.

Ship Design Apostolos Papanikolaou,2014-09-16 This book deals with ship design and in particular with methodologies of the preliminary design of ships. The book can be used as textbook for ship design courses or as additional reading for university or college students of naval architecture courses and related disciplines; it may also serve as a reference book for naval architects, practicing engineers of
