Model-based Systems Architecting Daniel Krob, 2022-06-14 Model-based Systems Architecting is a key tool for designing complex industrial systems. It is dedicated to the working systems architects, engineers and modelers, in order to help them master the complex integrated systems that they are dealing with in their day-to-day professional lives. It presents the CESAMES Systems Architecting Method (CESAM), a systems architecting and modeling framework which has been developed since 2003 in close interaction with many leading industrial companies, providing rigorous and unambiguous semantics for all classical systems architecture concepts. This approach is practically robust and easy-to-use: during the last decade, it was deployed in more than 2,000 real system development projects within the industry, and distributed to around 10,000 engineers around the globe.

365 Aircraft You Must Fly Robert F. Dorr, 2015-07-07 A fascinating, entertaining, and amusing plane-by-plane journey through aviation history. Aviation has come a long way since the Wright Brothers built their glider in Kitty Hawk, North Carolina, in 1903. From among the thousands of different types of military and commercial aircraft constructed over the past 100 years, aviation expert Robert F. Dorr profiles the most important, fascinating, and famous aircraft ever made. Your opinions might differ, but you wouldn't want to miss out on the planes Dorr identifies as flights of a lifetime. The book covers 365 of the most iconic aircraft in world history that enthusiasts, serious-minded hobbyists, and casual fans would love to fly if given the chance. Clear photography, historical context, and specs get you as close as possible to these planes without setting foot in a hangar. While covering every era of aviation history, many of the planes in 365 Aircraft You Must Fly were flown during World War II, a time unmatched in aviation for its technological advances,

romance, and clarity of purpose. During this golden age of flying, propellers gave way to jet engines, and the Greatest Generation fought gallantly in them. Explore the history, thrills, and joy of flying the world's most amazing 365 aircraft.

The Official Illustrated History of RAF Search and Rescue Paul E Eden, 2020-07-09 In February 2016 the RAF's Search and Rescue Force (SARF) celebrated its 75th anniversary. In June that year the world-renowned and universally admired service was officially disbanded, despite attempts from many, including HRH Prince William, to save it as part of the RAF. This book is an official, fully illustrated, in-depth account of the SARF's rich and glorious history, from its origins in World War II through to its recent withdrawal. The book contains a foreword by HRH Prince William himself, plus action-packed and awe-inspiring photographs from the RAF's archive of photographs and exclusive interviews with former crewmembers, telling their own dramatic stories of derring-do. Officially endorsed by the RAF, *An Illustrated History of the RAF Search and Rescue Force* is the first, and probably the only, major book of its kind written on this subject. It is an essential purchase for anyone with an interest in military history, British history, the Royal Family and those who love stories of extreme and daring rescue missions.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate

students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed, 2017-07-06 Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book's first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.

Changing The Dynamics And Impact Of Innovation Management: A Systems Approach And The Iso Standard Joanne Hyland, Magnus Karlsson, Mats Magnusson, John Bessant, Ingrid Kihlander, Jimmi Normann Kristiansen, 2022-09-27 The ISO Innovation Management System (IMS) Standard (ISO 56002) provides a much needed and well-timed input to the innovation management discipline. While research efforts within the domain of innovation management have vastly increased over the past decades, research has primarily been conducted through specific contributions to distinct areas of innovation management (e.g., top management, culture, processes), lacking a more holistic perspective. Practitioners know that managing innovation is challenging. Bringing in a globally recognised standard that offers a holistic perspective will be key in professionalising the innovation

management discipline, much like quality management and project management standards have done in the past. This book focuses on the ISO Innovation Management System Standard and the links with ISPIM's Body of Knowledge (BoK) special interest group, the ISO innovation management community, and the International Collaboration Platform for Innovation Management System (ICP4IMS). It covers four topics as follows:

Streamlining U. S. Strategy for the Sequester Era Nikolas Gvosdev, 2013-02-28 Whether the U.S. defense budget is cut through sequestration or more thoughtfully planned measures, U.S. strategy and America's defense posture will be dramatically impacted over the coming decade by reduced spending on defense and national security. Whether in rebalancing America's strategic focus to the Asia-Pacific region; realigning the force structure of the armed forces, especially the U.S. Army; pursuing counterterrorism and other security priorities; and seeking contributions from allies and partners, American policymakers can no longer ignore cost and budgetary constraints when it comes to shaping U.S. strategy and rightsizing America's global security role.

The Economics of the Global Defence Industry Keith Hartley, Jean Belin, 2019-11-08 This book makes an original contribution to our knowledge of the world's major defence industries. Experts from a wide range of different countries – from the major economies of North America and Western Europe to developing economies and some unique cases such as China, India, Singapore, South Africa and North Korea – describe and analyse the structure, conduct and performance of the

defence industry in that country. Each chapter opens with statistics on a key nation's defence spending, its spending on defence R&D and on procurement over the period 1980 to 2017, allowing for an analysis of industry changes following the end of the Cold War. After the facts of each industry, the authors describe and analyse the structure, conduct and performance of the industry. The analysis of 'structure' includes discussions of entry conditions, domestic monopoly/oligopoly structures and opportunities for competition. The section on 'conduct' analyses price/non-price competition, including private and state funded R&D, and 'performance' incorporates profitability, imports and exports together with spin-offs and technical progress. The conclusion explores the future prospects for each nation's defence industry. Do defence industries have a future? What might the future defence firm and industry look like in 50 years' time? This volume is a vital resource and reference for anyone interested in defence economics, industrial economics, international relations, strategic studies and public procurement.
