### The Japanese Aircraft Carrier Akagi Stefan

Dramiński,2017-03-19 This vessel, which was to become the most famous Japanese aircraft carrier and the symbol of the might of the Imperial Japanese Navy aviation, was initially built as a battlecruiser. Only as the result of the resolutions of the Washington Naval Treaty the Akagi (Red Castle, the name of a Japanese mountain) was completed as an aircraft carrier. During the first six months of the war in the Pacific she was the flagship of the carrier strike group, marching from one victory to another. The reversal took place during the battle of Midway, when a hit by a single bomb in a fatal moment sealed her fate.

**Post-Fukushima Activism** Azumi Tamura, 2018-06-08 Political disillusionment is widespread in contemporary society. In Japan, the search for the 'outside' of a stagnant reality sometimes leads marginalized young people to a disastrous image of social change. The Fukushima nuclear disaster was the realization of such an image, triggering the largest wave of activism since the 1960s. The disaster revealed the interconnected nature of contemporary society. The protesters regretted that their past indifference to politics prefigured such catastrophe and became motivated to protest in the streets. They did not share any

totalizing ideology or predetermined collective identity. Instead, the activism provided a space for each body to encounter others who forced them to feel and think, which also introduced an ethical dimension to their politics. In this book, Azumi Tamura proposes a concept of politics as a series of endless experiments based on creative responses to unexpected forces. Instead of searching for a transcendental reference for politics, she investigates an immanent force within individuals that motivates them to become involved in political action. Referencing Deleuzian philosophy, Tamura provides a different epistemological and ontological approach to the Social Movement Studies. She suggests social movements themselves generate knowledge about how one may live better in a complex society and where our lives are exposed to uncertainty. This knowledge is neither empirical knowledge, nor normative political theory of 'how we should live.' Instead, social movements bring affective knowledge into politics as they offer a space for experimenting with 'how we might live.' The encounter with such knowledge galvanizes our desire for 'how we want to live' and encourages new experiments.

**Specialty Polymers** Faiz Mohammad, 2007 The synthetic counterparts of natural polymeric materials are now finding applications as light weight, mechanically strong, and environmentally stable sheets, fibers, films, adhesives, paints, and foams have replaced most of the commodity and structural materials. The systematic research on the preparation, characterization, and utilization of plastics resulted in creation of polymers often containing a set of several desirable properties in a single polymer. The polymers have established their place in engineering applications as well. Although the bulk of plastics production focuses on relatively simple commodity polymers, the proportion of specially designed and tailor-

made plastics for specific and sophisticated applications is also increasing at a great pace. The specialty plastics, as well as their use in specific and sophisticated applications, are the key to the continued scientific growth and technological advances in the new millennium. This book thoroughly covers today's rapidly growing field of specialty polymers and their applications in more sophisticated and specialized areas. It gives the most recent in-depth knowledge and extremely comprehensive details of the chemistry, physics, material science, technology, and device applications of specialty polymers. This comprehensive book containing 16 chapters is the result of the untiring efforts of 35 most renowned experts from the national and international scientific community. This book is thought-provoking to the researchers working in the fields of chemistry, biochemistry, biotechnology, medicine, polymer chemistry, semiconductor physics, material science, electrochemistry, biology, electronics, photonics, material science, solid state physics, nanotechnology, electrical and electronics engineering, optical engineering, device engineering, data storage, etc.

## **Biology of Inorganic Nitrogen and Sulfur H.**

Bothe, A. Trebst, 2012-12-06 Nitrogen and sulfur compounds are continuously synthesized, degraded and converted into other forms in nature. There are many similarities in the principle problems and basic mechanisms of the biology of inorganic nitrogen and sulfur. Many details are not yet understood and hence are the subject of active investigation the world over. In May, 1980, a conference was held in Bochum, Federal Republic of Germany, at which attempts were made to discuss and compare all aspects of both the nitrogen and the sulfur cycle. Lectures were given by internationally recognized experts on the physiology, biochemistry, genetics, and ecology of dinitrogen fixation, of assimilatory and dissimilatory nitrate and sulfate reduction, and of ammonia and sulfide oxidation. In addition, important data were communicated by German scientists of the national program on the Metabolism of Inorganic Nitrogen and Sulfur Compounds, supported by the Deutsche Forschungsgemeinschaft. This book contains all the contributions to the meeting and consequently should be of interest to researchers, teachers, and students in the field. The members of the German national program on the Metabolism of Inorganic Nitrogen and Sulfur Compounds would like to thank the Deutsche Forschungsgemeinschaft for their generous financial support of the scientific projects during the past four years and for the conference itself. Without this help, the present book would not have been written. The members express their appreciation particularly to Dr. A. Hoffmann of the Deutsche Forschungsgemeinschaft for her invaluable skill and patience in taking care of the projects and scientists.

**Chinese Battleship vs Japanese Cruiser** Benjamin Lai,2019-02-21 The 1894–95 war between China and Japan, known in the West as the First Sino-Japanese War, lasted only nine months, but its impact resonates today. The Chinese Beiyang (Northern) Fleet was led by her flagship, Dingyuan, and her sister ship, Zhenyuan, which were the biggest in Asia; German-built armoured turret ships, they were armed with four 12in guns and two 6in guns, plus six smaller guns and three torpedo tubes. For their part the Japanese fleet, including the Matsushima and her sister ships Itsukushima and Hashidate, were each armed with a single 12.6in Canet gun and 11 or 12 4.7in guns, plus smaller guns and four torpedo tubes. The scene was set for a bloody confrontation that would stun the world and transform the relationship between China and Japan. Fully illustrated with stunning artwork, this is the engrossing story of the Yalu River campaign, where Chinese and Japanese ironclads fought for control of Korea.
