**Mw & Km/h** Françoise Nieto,2010 Alstom's history (originally called Alsthom) is that of a company which has been international from its very beginnings in 1928 and whose raison d'être has always been industrial excellence. The reader can follow Alstom's unique path via the most innovative achievements of their time which have all affected the daily lives of several generations. Untold until now, this history covers the many sites of Alstom's different activities in over 70 countries as well as the people who have played a role in its strategy, journeying through both mergers and divestments, like other large multinationals, and facing the challenges imposed by international events and political changes on the areas where Alstom is active. A high-tech, global company, Alstom today covers three infrastructure markets which are essential for economic, social and environmental development : power generation, electricity transmission and rail transport. The Group is a world leader in many areas : Alstom equipment generates the electricity which lights one in four of the world's many billion light bulbs. Worldwide, Alstom makes seven out of ten trains capable of over 300 km/h, as well as one out of every three tramways and one metro in four. With more than 500 mostly unpublished images, this book takes the reader into the heart of Alstom's workshops, test facilities and projects which marry gigantic size and pinpoint precision. It revives the memory of hard-earned technical progress and is a true reflection of a company at the core of environmental responsibility which, far from being the concern of just experts, affects each and every one of us.

**European Union Competition Policy versus Industrial Competitiveness** Hikaru Yoshizawa,2021-11-10 The book examines whether EU competition policy is applied fairly and consistently to EU and non-EU firms despite persistent political pressure from member states for a relaxation of the rules and deals with the dilemma of regional organisations in the global political economy. Focussing on the EU's desire to achieve balance between the promotion of market competition and the enhancement of international competitiveness, the book explores the validity of its attempts successfully to ensure a 'stringent competition policy' which is nationality-blind and comparatively strict. Finally, it shows that the competition-competitiveness dilemma remains unresolved because the EU's capability to set global regulatory standards is constrained by competition and the need to engage in multilateral forums, such as the WTO and the International Competition Network. This book will be of key interest to scholars and students of European Union studies, EU competition law and policy, EU external action and more broadly to global governance, international political economy and international relations.

In the following nine chapters, the editors bring together case studies from nine leading enterprises in Zhejiang, including Baoxiniao, Shuanghuan, Feida, ROBAM, Xinhai, Yinlun, Weixing, Deli and Fotile, providing an analysis of their branding process.

**Preventing Corporate Corruption** Stefano Manacorda,Francesco Centonze,Gabrio Forti,2014-04-28 This book presents the results of a two-year international research project conducted for the United Nations Office on Drugs and Crime (UNDOC) to investigate and provide solutions for reducing bribery and corruption in corporations and institutions. It starts with an empirical case study on the effectiveness of a set of self-regulation rules adopted by multinational companies in the energy sector. Second, it explores the context and factors leading to corruption internationally (and the relationships between domestic criminal law and self-regulation). Third, it examines guidelines for the adoption of compliance programs developed by international institutions, to serve as models for the future. The principle result of the book is a three-pronged Anti-Bribery Corruption Model (so called ABC Model), endorsed by the United Nations, intended as a corruption prevention tool intended to be adopted by private corporations. This work provides a common, research-based standard for anti-bribery compliance programs, with international applications. This work will be of interest to researchers studying Criminology and Criminal Justice, particularly in the areas of organized crime and corruption, as well as related areas like Business Ethics and Comparative International Law.

**Fraud and Corruption** Duncan Smith,2022-10-11 This book discusses and analyses fraud and corruption cases from many industries including construction, finance, pharmaceutical, transport, retail, medical, health, communication, education and military. The second section of the book includes materials on fraud and corruption such as the full text of the United Nations Convention Against Corruption, the OECD Convention on Combating Bribery of Foreign Public Officials in International Business, and the EIB's Anti-Fraud Policy and Whistleblowing Policy. It also includes examples about current corporate anti-corruption policies from companies like Apple, Tesla and Coca Cola. For interested readers, the book offers additionally a list of films that realistically cover the topics fraud, corruption and whistleblowing.

**Gas Turbine Powerhouse** Dietrich Eckardt,2013-12-20 This book tells the story of the power generation gas turbine from the perspective of one of the leading companies in the field over a period of nearly 100 years, written by an engineer. Especially in times of imminent global economic crises it appears to be worthwhile to reflect on real economic values based on engineering ingenuity and enduring management of technological leadership. Though the book is primarily designed as a technical history of the BBC/ABB/Alstom power generation gas turbines, its scope is sufficiently broad to cover general development trends, including parallel competitor activities. A special benefit is the historical breakdown to the gas turbine component level, so that the book actually outlines the development of axial compressors from early beginnings, the progress in combustion technology towards extraordinary low emission values and that of axial turbines with special emphasis on early turbine cooling innovations. The sheer length of certain engineering developments over several decades allows interesting historic observations and deductions on inherent business mechanisms, the effects of technology preparations and organisational consequences. A look into the mirror of the past provides revelations on the impact of far-reaching business decisions.

**Left Out of the Bargain** Jacinta Anyango Oduor,Francisca M.U. Fernando,Agustin Flah,Dorothee Gottwald,Jeanne M. Hauch,Marianne Mathias, Ji Won Park,Oliver Stolpe,2013-12-11 Over the past decade, countries have increasingly used settlements that is, any procedure short of a full trial to conclude foreign bribery cases and have imposed billions in monetary sanctions. There exists a gap in knowledge, however, regarding settlement practices around the world and the disposition of these monetary sanctions notably through the lens of recovery of stolen assets. Left out of the Bargain, a study by the Stolen Asset Recovery Initiative (StAR), provides an overview of settlement practices by civil and common law countries that have been active in the fight against foreign bribery. Using the United Nations Convention against Corruption (UNCAC) as its point of reference, the study addresses concerns voiced by the international community: What happens to the money associated with the settlements, and is it being returned to those most directly harmed by the corrupt practices? And what can be done to assist those countries harmed by foreign bribery? Left out of the Bargain has found that 395 settlement cases took place between 1999 and mid-2012, resulting in a total of US\$6.9 billion in monetary sanctions imposed against companies and individuals. Of this amount, nearly US\$6 billion came from settlements that took place in a country different from that of the allegedly bribed foreign public officials. But only about US\$197 million, or 3 percent, has been returned or ordered returned to the countries whose officials were accused of accepting bribes. Left out of the Bargain urges countries whose officials were allegedly bribed to intensify their efforts to investigate and prosecute the providers and recipients of foreign bribes, hence improving these countries' prospects for recovery of assets lost through corruption. The study also calls for more proactive international cooperation and coordination to ensure that all affected countries are afforded the opportunity to seek redress for harms suffered and for the recovery of assets thus fulfilling the principles set out in UNCAC.

*Industrial Excellence* Christoph H. Loch,Ludo van der Heyden,Luk N. van Wassenhove,Arnd Huchzermeier,Cedric Escalle,2003-03-11 What does excellent manufacturing management mean? Management texts to date have emphasized that it is, above methods such as SPC or TQM, a matter of intangibles and culture. This book takes the myth out of management excellence; it can be learned and practiced. First, manage the three core processes, strategy deployment, product and process development, and the supply chain. And secondly, pay attention to the dimension of management quality, direction setting, integration and delegation, communication, participation, measurement, and employee development. This book explains management quality and demonstrates how it is implemented, with ten plant tours through world-class factories from different industries.

European Unions Roland Erne,2011-05-02 Roland Erne's view of transnational trade union networks challenges the assertion that no realistic prospect exists for remedying the European Union's democratic deficit—that is, its domination by corporate interests and lack of a cohesive European people. His book describes the emergence of a European trade union movement that crosses national boundaries. Erne assesses national and EU-level trade union politics in two core areas: wage bargaining in the European Monetary Union and job protection during transnational corporate mergers and restructuring. The wage coordination policies of the European metal and construction workers' unions and the unions' responses in the ABB-Alstom Power and Alcan-Pechiney-Algroup merger cases, Erne finds, show that the activities of labor are not confined to the national level: labor's policies have undergone Europeanization. This cross-national borrowing of tactics is itself proof of the increasing integration of European states and societies. European Unions is based on an exceptionally wide range of research methods, including statistical analysis, participant observation, and interviews with EU-level, national, and local trade unionists and works councilors. It also draws on a wide range of European, German, French, Italian, and Swiss union documents and a multilingual body of academic literature across several disciplines, including political science, sociology, and law. Erne's multilevel inquiry goes beyond country-by-country comparisons of national cases and his book will prove of great relevance to readers interested in the future of labor, social justice, and democracy in an increasingly integrated world.

Wind Power Ben Backwell,2014-09-23 Wind Power - The Struggle for Control of a New Global Industry looks at the nations, companies and people fighting for control of one of the world's fastest growing new industries and how we can harness one of the planet's most powerful energy resources - wind power. The book also examines the challenges the sector faces as it competes for influence and investment with the fossil fuel industry across the globe. The wind power business has grown from a niche sector within the energy industry to a global industry attracting substantial investment in recent years. In Europe wind has become the biggest source of new power generation capacity, while wind is successfully competing with the gas, coal and nuclear sectors in China and the US. The specialist wind turbine companies that pioneered the business have gone global over the last decade, while big industrial conglomerates have entered the fray. European companies are struggling to maintain their technological and market lead in the sector, in a three cornered battle with China and the US. Meanwhile, the industry is fighting to drive down costs in the face of a fossil fuel generation industry bolstered by the onset of cheap shale gas. And wind companies continue to wrestle

with a stop-go cycle of investment across the world, with some traditional markets stuttering under the impact of the financial crisis and fiscal austerity, while new power hungry markets in Asia and South America emerge. Wind Power - The Struggle for Control of a New Global Industry analyses the industry climbers, the investment trends and the technological advancements that will define the future of wind energy.
