Ahmed F. El-Sayed

Antonov Jet Twins E. Gordon, Yefim Gordon, Dmitrii Komissarov, 2005 The need to provide a state-of-the-art jet successor to the ubiquitous An-26 led Antonov to develop a twin-turbo-fan tactical airlifter, the An-72, which made use of the Coanda effect, improving wing lift and field performance dramatically. The prototype flew in 1977, but it was not until the mid-1980s that production began in Khar'kov. The baseline military airlifter soon spawned a wide selection of derivatives. First was the An-74; originally conceived as a specialized version for Arctic and Antarctic support, it entered production as an ordinary civil transport. Concerted efforts by the Antonov OKB to enhance the capabilities of the An-72/An-74 family led to the development of the An-72P armed border patrol version, the convertible cargo/passenger An-747T and An-74TK, the An-74S flying hospital and the radically redesigned An-74TK-300 with engines on underwing pylons - an arrangement which improved the all-important economic efficiency. The most intriguing An-72 derivative was the unorthodox An-71 AEW aircraft; originally meant for shipboard operations, it was prevented from entering production by the political and economic situation.

Pakistan's War Machine: An Encyclopedia of its Weapons, Strategy and Military Security Saghir Iqbal,2018-05-13 The global security challenges after the post-Cold war period has affected many countries. Pakistan's geography and location present its security planners with serious, almost irresolvable strategic and tactical problems. It borders the nuclear states of India and China, an ambitious Iran, and an unstable Afghanistan, which is perceived as a gateway to its commercial-strategic ambitions in Central Asia. Pakistan's key security problems are a reflection of its history and domestic circumstances. The overriding concern of Pakistan is its internal and external security. Strategically, Pakistan lacks territorial depth. Its main cities and communication routes are relatively close to the border with India and are susceptible to attack. In addition, the headwaters of Pakistan's rivers and main irrigation systems originate from India. Pakistan's borders with India were also new and mainly unfortified and, in many places, were drawn in ways that made them indefensible. Because the borders were also un-demarcated, there was abundant chance for conflict. Pakistan has particularly been affected with a number of issues. It has been argued by many that a Fourth generation/Hybrid war has been imposed on Pakistan, in order to break the nation (Balkanization of Pakistan into different parts) with the aim of making it either extremely weak or total destruction as a nation state (so that it is not able to challenge the hegemonistic ambitions of its adversaries).The purpose of this book is to assess the military security problems that Pakistan faces, and focus on its external security matters (military threats from neighbouring countries such as India, balance of power in the region, nuclear and ballistic missile threats, relationship with external powers, the high risk of war and its role on the 'War on Terror'), and its internal security problems (sectarianism, proliferation of small arms, refugees, ethnic violence, drug problem, economic weaknesses), and also its ability to cope with these problems.

The 2024 edition provides an open-source assessment of the armed forces and equipment inventories of over 170 countries, with accompanying defence economics data. In addition to detailed country data, The Military Balance assesses, region-by-region, important military issues. It includes graphics to illustrate defence personnel, equipment, and procurement developments. The 65th edition examines emerging lessons from Russia's full-scale invasion of Ukraine, details Chinese military activity around Taiwan, and identifies developments in uninhabited aerial vehicle exports. The accompanying wallchart spotlights the important issues around critical national infrastructure in the Euro-Atlantic. The book draws on the breadth of data in the Military Balance+ online database. The Middle East Military Balance, 2001-2002 Shlomo Brom,Yiftah Shapir,2002 Up-to-date, authoritative information on military capabilities in the Middle East. The explosion of violence between Israelis and Palestinians that began in late 2000 is a tragic reminder of the potential for armed conflict in the Middle East. Although many developments in the 1990s appeared to have reduced the likelihood of war in the region, stability between Israel and its Arab neighbors remains tenuous. Security in the Persian Gulf also remains uncertain, as Iran and Iraq have continued their pursuit of weapons of mass destruction. Understanding the dynamics of security in the Middle East requires detailed information on the military capabilities of the region's countries.The Middle East Military Balance is prepared annually by the Jaffee Center for Strategic Studies in Tel Aviv. It is based on data from many sources, including some that are unavailable to other institutes. With its wealth of current, hard-to-find information, it offers an authoritative and indispensable guide to military capabilities in the Middle East. Governments, the media, and researchers pay close attention to its data and analysis each year.

Bird Strike in Aviation Ahmed F. El-Sayed,2019-05-20 Groundbreaking Handbook Offers Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard Though annual damages from bird and bat collisions with aircraft have been estimated at \$400 million in the United States and up to \$1.2 billion in commercial aviation worldwide and despite numerous conferences and councils dedicated to the issue, very little has been published on this expensive and sometimes-lethal flying risk. Bird Strike in Aviation seeks to fill this gap, providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough

and comprehensive examination of the subject, Dr. El-Sayed offers different approaches to reducing bird strikes, including detailed coverage of the three categories necessary for such reduction, namely, awareness/education, bird management (active and passive control), and aircraft design. In addition, the text discusses the importance of cooperation between airplanes, airports and air traffic authorities as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include: Statistics and analyses for bird strikes with both civil and military helicopters as well as military fixed wing aircrafts, including annual costs, critical flight altitudes, critical parts of aircraft, distance from air base and specifics of date and timing Thorough review and analysis all fatal bird strike accidents and most non-fatal accidents since 1905, the first book to provide such a reference The use of numerical methods in analyzing historic data (ex. probability functions, finite element methods for analyzing impact on aircraft structure, experimental measurement technique for displacement, vibration, component distortion, etc.) Instruction on identification of bird species (using visual, microscopic, and DNA evidence) and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision With its wealth of statistical data, innovative research, and practical suggestions, Bird Strike in Aviation will prove a vital resource for researchers, engineers and graduate students in aerospace engineering/manufacturing or ornithology, as well as for military and civilian pilots and flight crew or professionals in aviation authorities and air traffic control.
