**Michael Jackson** Shawn Henning,2010-06 Shawn Henning's new book is a powerful and overwhelming tribute and legacy to Michael Jackson. In one book, he's collected love letters, reflections, eulogies, poems, essays and drawings from people throughout the world who have a special appreciation for the King of Pop, Michael Jackson. I was particularly impressed at the diversity of material, from so many different countries and cultures ndash; all of it heartfelt and illuminating. In *We Love You More*, we learn about the many different ways that Michael Jackson affected people from all walks of life. The participants talk about how Michael's music, creativity and public example affected their lives and helped them to be better people. The contributions are a wonderful cathartic output to help to come to terms with the loss of Michael's huge talent. They will not only comfort those who have written them, but those who read them. People will learn about the experiences they have in common, with people throughout the world, who followed Michael's career, his music, his good deeds and the example he set for this generation and generations to come. The book will also be of comfort to Michael's own family. They will see that the spirit of Michael will continue in people everywhere and in many ways and for many reasons. It's also fascinating to learn what people have to say about different songs and what they meant to their lives. I'm impressed by the diverse elements in the book... from eulogies, to memories to poems and beautiful drawings and paintings and even photo montages at the end. Mr. Henning... you've done a wonderful service to the Michael Jackson fan community and I commend you. Sincerely yours, Larry Nimmer

**Full-Moon above the Vosges** Cosmin Stefan Georgescu,2021-12-31 *Full-Moon above the Vosges* gives us a dynamic perspective of human life, which unfolds through growth and change. Starting with adolescence, we move on to the events

that most mark a man during his growth and maturation. Historical and classical anecdotes give us a perspective of the Earth and humanity through the eyes of the author. The world of personal characters from the author's life is combined with that of classical and historical culture to which each of us can refer. The work is a perfect blend of personal and collective events that intertwine to narrate the author's life and personal experiences. The reader is taken on a journey that begins with the writer's childhood and passion for writing, moves on to his growth and medical career and culminates in his maturity, denoted by his reflections on man and his nature, while the common thread is the feeling of solitude that only the moon can give us. Cosmin Stefan Georgescu has been fascinated by words ever since his childhood, when he used to read and recite poems encouraged by his parents. Both of them being teachers, they were his first model during this early period of life. However, he later decided to become a doctor, graduating in 1997 from Carol Davila University of Medicine in Bucharest. During his career, he didn't let down his passion, organizing cultural events and subscribing to the Society of Physician Writers in Romania. In 2015 he moved to France, where he has been living ever since. He published books in Romania, UK and France. He was awarded the Romanian "Sentimental Twilight" Prize in 2020 and the Critics' Prize for his work Letters to God return to sender in 2021.

*HCI International 2021 - Late Breaking Posters* Constantine Stephanidis, Margherita Antona, Stavroula Ntoa, 2021-11-05 This two-volume set CCIS 1498 and CCIS 1499 contains the late breaking posters presented during the 23rd International Conference on Human-Computer Interaction, HCII 2021, which was held virtually in July 2021. The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions. Additionally, 174 papers and 146 posters are included in the volumes of the proceedings published after the conference, as “Late Breaking Work” (papers and posters). The posters presented in these two volumes are organized in topical sections as follows: HCI Theory and Practice; UX Design and Research in Intelligent Environments; Interaction with Robots, Chatbots, and Agents; Virtual, Augmented, and Mixed Reality; Games and Gamification; HCI in Mobility, Transport and Aviation; Design for All and Assistive Technologies; Physiology, Affect and Cognition; HCI for Health and Wellbeing; HCI in Learning, Teaching, and Education; Culture and Computing; Social Computing; Design Case Studies; User Experience Studies.

*Capillary Surfaces* Dieter W. Langbein, 2002-01-29 Featuring a foreword by the astronaut Ulf Merbold, this book is devoted to interfaces between two fluids, that is, between a liquid and a gas or between two liquids. It is the first review on the subject, providing an up-to-date overview.

*Landscapes and Landforms of Eastern Canada* Olav Slaymaker, Norm Catto, 2020-02-13 This critical book focuses on the geomorphological landscapes of eastern Canada and provides a companion volume to “Landscapes and Landforms of Western Canada” (2017). There are a number of unique characteristics of eastern Canada’s landscapes, notably its magnificent coastlines, the extraordinary variety and extent of wetlands, the huge Great

Lakes-St. Lawrence basin, the high incidence of meteorite craters, the spectacular Niagara Falls, urban karst in Montreal and Ottawa, youthful, glaciated karst in Ontario, Newfoundland, Quebec and Nova Scotia, the ubiquitous permafrost terrain of Nunavut, Labrador and northern Quebec and the magnificent arctic fjords and glaciers. Looking at coastlines, the tidal extremes of the Bay of Fundy are world renowned; the structural complexity of the island of Newfoundland is less well known, but produces an astounding variety of coastlines in close succession; the arctic fjordlands of Baffin and Ellesmere islands and the extravagant raised beaches of Hudson Bay bear comparison with the classic fjords of Norway and the Baltic Sea raised beaches. As for wetlands, there are distinctive Arctic, Subarctic, Boreal, Eastern Temperate and Atlantic wetlands, and their extent is second only to those of Russia. In the Hudson and James Bay regions, between 75-100% of the terrestrial surface is comprised of wetlands. One of North America's largest river basins, the Great Lakes-St. Lawrence basin, has its source in Minnesota, straddles the USA-Canada border and debouches into Quebec as the St. Lawrence River and evolves through its estuary into the Gulf of St. Lawrence, a journey of almost 5,000 km. As far as meteorite craters are concerned, 10% of the world's total are located in eastern Canada, including some of the largest and most complex landforms. They are preserved preferentially in the ancient Shield terrain of Quebec. Finally, the three million km<sup>2</sup> of permafrost controlled relief in eastern Canada serves as a reminder of the vulnerability of eastern Canada's landscapes to climate change. Effects of warming are expressed through thawing of the permafrost, disruption of transportation corridors and urban construction problems, ever-present geomorphic hazards.

**Slope Tectonics** Michel Jaboyedoff,2011 Usually geomorphology, structural geology and engineering geology provide descriptions of slope instability in quite distinctive ways. This new research is based on combined approaches to providing an integrated view of the operative slope processes. 'Slope Tectonics' is the term adopted here to refer to those deformations that are induced or fully controlled by the slope morphology, and that generate features which can be compared to those created by tectonic activity. Such deformation can be induced by the stress field in a slope which is mainly controlled by gravity, topography and the geological setting created by the geodynamic context. The content of this book includes slope-deformation characterization using morphology and evolution, mechanical behaviour of the material, modes of failure and collapse, influence of lithology and structural features, and the role played by controlling factors.

*The Gravity of Anti-Gravity* Tim Blagge,2012-09-10 Let's imagine you are a brilliant young scientist, just ready to graduate from Cal-Tech and you invent and build a machine that will fundamentally change the course of human history.You know your anti-gravity device will revolutionize industry; and the ripple effect will touch every person on the planet. So how do you get your device to market without inciting economic chaos?This is exactly the dilemma faced by Bill Burton, our brilliant, yet down-to-earth

young scientist. How does he navigate the web of good and evil entities who will stop at nothing to own his device and the science behind it? With the help of an enigmatic beautiful scientist, Dr. Stella Morton and her Private Investigator brother, Rolf, new author Tim Blagge, weaves a spellbinding story rife with betrayals and mysteries that involve both criminal organizations and the highest levels of the world's governments. Strong characters, humor, pulse pounding excitement and an ending like no other will satisfy even the most discerning fan of contemporary conspiracy novels.

Excerpt from Book: The next morning while I was still sleeping, the phone rang. It was Jerry and he sounded frantic. Bill, have you seen the news? You won't believe it. I think you might have, have been responsible. He stuttered. Jerry what are you talking about? Just turn on the news, buddy boy. Jerry said excitedly. I'll call you back. I said I turned on the news. The story was on every station. This is KFAJ reporting, the TV barked. Scientists are stunned and puzzled at a phenomenon that they have never before observed. About 7:57 P.M. Pacific Time last night, the earth lost seven tenths of a second of time. Now before you go and celebrate that you are younger now than you would have been, it has caused some huge problems. All the satellite navigation systems in the world must be recalibrated. This has affected all forms of transportation. Planes have been grounded, and ships, trains, subways - all other forms of transportation have been stopped awaiting the fix to our global positioning satellites. The militaries of the world have been put on high alert. No one seems to know if this is a natural or accidental occurrence or if some terrorist or rogue nation is sending some kind of message. Until the satellites are recalibrated, most of our offensive and defensive rocket capabilities are also off-line. Scientists and technicians say they will have the GPS satellite systems adjusted in the next hour. Then we should see the world return to normal in a day or two. And it's a miracle, but so far, there are no reports of death or injury. Let's go to Norma Woodard

who is with Dr. Franz Belter of MIT. Dr. Belter, can you explain what just happened and how the world suddenly lost time? Ms. Woodard, my colleagues and I have met all night and so far, even though we have some hypotheses on this strange phenomenon, we don't have any definitive answers yet. First we thought that it may have been a giant solar flare, but nothing unusual emanated from there. Then we checked to see if the earth was hit with a large burst of particle radiation from outer space. We have detected nothing like that. Does that mean you don't know what happened at all? Woodard questioned. Ms. Woodard, we have come only to two conclusions. The first is that something has briefly interrupted space-time. The second is that we think it originated here on earth!

*Landslides and Engineered Slopes. Experience, Theory and Practice* Stefano Aversa, Leonardo Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 Landslides and Engineered Slopes. Experience,

Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides, (Naples, Italy, 12-19 June 2016). The book aims to emphasize the relationship between landslides and other natural hazards. Hence, three of the main sessions focus on Volcanic-induced landslides, Earthquake-induced landslides and Weather-induced landslides respectively, while the fourth main session deals with Human-induced landslides. Some papers presented in a special session devoted to Subareal and submarine landslide processes and hazard” and in a “Young Session” complete the books. Landslides and Engineered Slopes. Experience, Theory and Practice underlines the importance of the classic approach of modern science, which moves from experience to theory, as the basic instrument to study landslides. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly, to predict future and, if required, manage similar events. Practical benefits from the results of theory to protect people and man-made works. Landslides and Engineered Slopes. Experience, Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.
