Synthesis of Potential Anti-radiation Drugs C. Richard Bresson, R. L. Cobb, S. D. Turk, 1963

Radioprotection, Radiomitigation and Radiorecovery S. J. Paxton Pierson, 2017-02-22 The author is a doctor of pharmacy, biochemist and writer focusing on phytochemicals and cancer prevention. The book is written post-observation of the 2011 Fukushima disaster in 2011, realizing that there was a dearth of usable interventionary information available for the lay public and medical professionals to deal with the health concerns of radiation accidents. This practical scientific exploration covers experimental approaches for tactical and pharmacological countermeasures. These are broadly comprised of measures and experimental agents, drugs, natural products and the diet, for not only ionizing radiation by other forms of radiation which affect health. Radiation of various types that emanate from such sources as security, occupational, communications, diagnostics, and therapeutic applications are also described in terms of health impact, as well as accidental and war exposures. Three chapters identify and categorize evolutionary pathologies of radiation damages and opportunities for treatment based on mechanisms of action. The book proposes logical, time-critical 'chronorithms' of preventive, early and late treatment of radiation damages. From the lay perspective to the medically-curious, up-to-date research is presented in RRR which outlines why, how and when to treat radiation. Persons who are concerned about radiation exposure will find useful information that is not easily available from other sources. Many anti-radiation approaches overlap with cancer-preventive therapies. The author's main goal was to describe, within the limits of inchoate medical research, what current directions a medical prescriber could consider, given various circumstances whereby radiation economy and pre- and post-radiation treatments were needed. RRR contains multiple illustrations, tables, graphs and charts; it explains the use of and grades many potential counter-radiation agents, including foods. It is both an educational exploration which attempts to explain concepts on both a lay and medical level with the hope of encouraging understanding for an expanded set of contemporary therapies. The reader will profit from a greater understanding of the risks of radiation exposure and the available, safe interventions they, in conjunction with advice from their medical provider, can take to help spare their health. Even if one learns that there are simple measures to be considered before a routine diagnostic radiation test, the book will have proven highly worthwhile.

Protect Yourself from Radiation S. Paxton-Pierson, 2018-08-22 *Protect Yourself From Radiation: A Practical Scientific Approach* *Protect Yourself From Radiation (PYFR)* is an extensive, hopeful and daring presentation of possible health-saving counter-radiation tactics. PYFR is an examination of scientific mechanisms, agents, and strategies to prevent damages from radiation. PYFR is written by a chemoprevention-trained pharmacognocist, biochemist, doctor of pharmacy and writer on cancer prevention. This book has a broad appeal to the avid self-help reader as well as the professional. The endeavor to write PYFR was initiated by observations: 1. The dearth of comprehensive protocols to deal with all aspects of radiation emergencies. This leaves the individuals within a community, including the medical community, rather unprepared against widespread radiation emergencies. 2. The practical dismissal and dis-acknowledgement of the dangers of and methods to protect from medical radiation. PYFR was written after observing the handling, mishandling and ignorance of the 2011 Fukushima disaster. Without usable interventionary information for the lay public and medical professionals to deal with the health concerns of radiation accidents and weapons, they are at a loss to respond with any effectiveness. PYFR as a practical scientific exploration covers experimental approaches for tactical and pharmacological countermeasures against radiation exposure. These approaches are broadly comprised of physical measures, experimental agents, drugs, natural products and dietary emphases. They are intended not only against ionizing radiation by other forms of radiation which adversely affect health. Three chapters identify and categorize evolving pathologies of radiation damages and thus the opportunities for treatment based on correlated mechanisms of action. The book proposes logical, time-critical 'chronorithms' for preventive, early and late treatment of radiation damages. Current research is presented in PYFR which outlines why, how and when to treat radiation exposures. Many anti-radiation approaches overlap with cancer-preventive therapies. The author's goal is to describe, within the limits of inchoate medical research, what current directions a medical prescriber could consider for use in various circumstances where pre- and post-radiation treatments are needed. PYFR contains multiple illustrations, tables, graphs and charts to explain concepts. The book covers the potential use of, and grades, many possible counter-radiation agents including foods. The reader will profit from learning the risks of radiation exposure and the available, safe interventions which may be taken in concert with their medical provider's advice to help spare health. Even if one learns that there are simple measures to be considered before a routine diagnostic radiation test or post nuclear accident, the book will have proven highly worthwhile. Each chapter in PYFR can stand alone. PYFR is structured as follows: * The book begins with a brief introduction to the historical misunderstanding and misuse of radiation, and the modern marvels of radiation applications. * A radiation science primer for the sophisticated reader. * Several chapters exploring early, immediate-post and late radiation damages and potential treatments which follow suit. * Navigating the implementation of phytochemical strategies, dietary interventions with recipe suggestions are provided. * A complete medical stratagem for the three interventional junctures of radiation exposure is orchestrated. * A summary chapter compiles options given the status of radiation exposure, weeding out extraneous information; in emergencies, quick survival knowledge is king. * Over 130 common and low toxicity substances are ranked for their usefulness, sculpting the best antiradiation treatment paradigm.

A Field Guide to Radiation Wayne Biddle, 2012-07-31 A comprehensive and accessible guide to understanding how radiation affects our everyday lives Nuclear energy, X-rays, radon, cell phones . . . radiation is part of the way we live on a daily basis, and yet the sources and repercussions of our exposure to it remain mysterious. Now Pulitzer Prize-winning journalist Wayne Biddle offers a first-of-its-kind guide to understanding this fundamental aspect of the universe. From fallout to radiation poisoning, alpha particles to cosmic rays, Biddle illuminates the history, meaning, and health implications of one hundred scientific terms in succinct, witty essays. *A Field Guide to Radiation* is an essential, engaging handbook that offers wisdom and common sense for today's increasingly nuclear world.

Nuclear Disaster Alex Woolf, 2013-07 Imagines what the world would be like after a nuclear disaster, speculating on an explosion's immediate and long-term impacts and how people would adapt to their new environment.

The Effects of Low Dose Radiation Elena Burlakova, Valeria Naiditch, 2004-08-31 The papers collected in this book show the results of investigations performed by Russian scientists in the field of low dose irradiation action. It is confirmed that low doses do have effects on the human organism and the environment and that the most serious consequences are observed in the far post-irradiation period. This branch of radiobiology, which developed after the Chernobyl accident and studied its consequences, is discussed in detail. The main part of reviews and articles is devoted to the aspects of low dose effects on the human and animal genome and far post-irradiation consequences. New details of mechanisms of low dose action are shown and methods of their determination are discussed. Furthermore, the adaptive response of organisms and the low dose effects on the immune system are

demonstrated. Also, the difference between protection mechanisms against low dose irradiation and against high dose irradiation is shown and proved.

Prostaglandin and Lipid Metabolism in Radiation Injury Thomas L., Jr. Walden, Haywood N. Hughes, 2012-12-06 This volume contains the proceedings of the International Conference on Prostaglandins and Lipid Metabolism in Radiation Injury held in Rockville, Maryland, on October 2-3, 1986. Over 200 persons from eight countries attended the program, which consisted of 24 oral presentations and 38 poster presentations. Forty-two of those presentations have been included in this volume. The conference was sponsored by the Armed Forces Radiobiology Research Institute, located in Bethesda, Maryland. The effects of radiation on lipid synthesis and membrane damage are aptly summarized in the first five chapters. These chapters describe the effects of radiation on lipid peroxidation of model membranes, and the role of lipid composition in mammalian cell death and in bacterial radio- and thermosensitivity. In bacteria, lipid peroxidation is not essential for radiation-induced cell death. One of the key points of the conference was the paradoxical nature of the radiobiology of eicosanoids. On the one hand, eicosanoids are mediators of damage; on the other, they are radioprotective agents. It is clear from the literature and from the data presented at the conference that both of these properties may also be observed as a consequence of radiotherapy. Some studies indicate that nonsteroidal anti-inflammatory drugs may minimize or prevent certain radiation induced damage, but other studies show no positive effect.

Photoprotective Green Pharmacology: Challenges, Sources and Future Applications Vinod K. Kannaujiya, Rajeshwar P. Sinha, Md. Akhlaqur Rahman, Shanthi Sundaram, 2023-11-26 This book illustrates the role of photoprotective and radioprotective metabolites from natural sources. Various classes of radioprotective metabolites derived from cyanobacteria, algae, fungi, bryophytes, pteridophytes, gymnosperms, and higher plants have been explained to reinforce the current knowledge in this field. In addition, the book elucidates the potential applications of these metabolites in pharmaceuticals, cosmetics, and biomedical sciences that will help develop commercial products in modern anti-radiation therapeutics. Topics such as stress tolerance environmental strategies, evolutionary tendency, and biosynthetic route of radioprotective compounds for cost-effective large-scale industrial production of the metabolites are also covered in the book. This book will add to the understanding of radioprotective mechanisms and curative measures for various deleterious diseases leading to cancer development. This volume also offers the latest insights into current and upcoming issues that arise from solar and atomic radiations and their amelioration by inherent radioprotective mechanisms of green plants. This book benefits readers from academia, industry, colleges, and research students to better understand the impacts of various radiations and the development of radioprotective green compounds.

Radiation induced expression of signaling molecules in mouse splenocytes Seema Kumari, 2013-03-06 Master's Thesis from the year 2004 in the subject Chemistry - Bio-chemistry, , course: M.Sc - Biochemistry, language: English, abstract: The hazards of exposure to ionizing radiation were recognised shortly after Roentgen's discovery of x-rays in 1895. Acute skin cancer, leukaemia and other biological damage were observed in the individuals working with x-ray generator. In the year, 1898 Becquerel performed the first recorded experiment in radiobiology, from this earlier study of radiobiology began. Since that time, a tremendous amount of research has been done attempting to interpret the reactions which take place from the moment that radiation enters a living cell until some permanent damage is produced. From beginning to end, these initial reactions are probably completed in a millionth of a second, making them very difficult to study. For this reason, it is still not known which of the many chemical or biochemical reactions brought about by ionizing radiation are responsible for initiating biological damage. Ionizing radiation is energy transmitted by X-rays, gamma rays, beta particles (high-speed electrons), alpha particles (the nucleus of the helium atom), neutrons, protons, and other heavy ions such as the nuclei of argon, nitrogen, carbon, and other elements. X-rays and gamma rays are electromagnetic waves like light, but their energy is much higher than that of light (their wavelengths are much shorter). Ultraviolet (UV) light is a radiation of intermediate energy that can damage cells like sunburns, but UV light differs from the forms of electromagnetic radiation mentioned above in that it does not cause ionization (loss of an electron) in atoms or molecules, but rather excitation (change in energy level of an electron). The other forms of radiation particles are either negatively charged (electrons), positively charged (protons, alpha rays, and other heavy ions), or electrically neutral (neutrons). [...]

Ionizing Radiation and the Immune Response - Part A , 2023-03-29 Ionizing Radiation and the Immune Response, Volume 376, Part A reviews the latest updates on the immune response induced by ionizing radiations. Sections discuss NK functions in radio-induced immune response, TRT and immune response, Radio-induced immune response and lipid metabolism, Effect of protons and heavy ions on immune response, Effect of flashtherapy and mini beam on immune response, Radio-induced lymphopenia, CT to potentiate radio-induced immune response, Impact of RT on healthy tissues (inflammation), Radio-induced macrophagic response, To use nanoparticles and ionizing radiations to modulate immune response: opinion of the chemist, biologist and clinician, and more. Additional sections touch on the Effect of low dose radiation on radio-induced immune response, Role of Dendritic cells in radiation-induced immune response, Relationship between the tumor microenvironment and the efficacy of the radiotherapy/immunotherapy combination+A23, and Biomarkers of radiation induced response to optimize radio-immunotherapy combination. Covers the latest insights on the biological and physical parameters that modulate radio-induced immune response Provides an accurate review by selected experts of the impact on the immune response of new techniques delivering ionizing radiations Presents valuable information to clinicians to optimize radiotherapy and immunotherapy combinations

Radiation Chemistry of Polymers V. S. Ivanov, 1992-06 Covers the main theoretical and practical problems involved in radiation chemistry of polymers. The processes of polymerization and modification of polymers induced by ionizing radiation, are described, as well as the radiation resistance of polymers and their protection from radiation.
