Orval P. Littleton

NASA Apollo Spacecraft Command and Service Module News Reference NASA,2011-09 Originally created in 1968 by prime contractor North American Rockwell for NASA, the Apollo Spacecraft News Reference (CSM) was intended to educate members of the media, government, and private sector contractors about one of history's most ambitious undertakings. Within its pages you'll find general information about the Apollo Program, and detailed examinations of component Modules, Subsystems and Support, with special focus on the Command Module. (A companion volume focusing on the LEM is also available.) Chapters include: Introduction, Saturn Launch Vehicles, Mission Description, The Moon and the History of Space Flight, Apollo Flight Tests, Command Module Overview, Service Module Overview, Lunar Module and SLA (Spacecraft-LM Adapter) Overview, Crew Accomodations, Displays and Controls, Docking Subsystem, Earth Landing Subsystem, Electrical Power Subsystem, Environmental Control Subsystem, Launch Escape Subsystem, Reaction Control Subsystem, Service Propulsion Subsystem, Telecommunications Subsystem, Stabilization and Control, Guidance and Navigation, Spacesuits, Final Testing, Safety, Reliability and Training, Apollo Manufacturing, Apollo Subcontractors, CSM Contract, Biographies, Apollo Chronology, Apollo Facts, Glossary, Abbreviations, Index. Although it may be one of the most complete studies of the systems and technology that made the giant leap possible, it's never been easy to find copies of this text because copies were never widely released -- until now. This reprint is of an edition featuring a mission similar to Apollo 12, and features all the original text, diagrams and photos. It's a wonderful reference for the space flight fan, docent or engineering buff or for anyone else who ever wondered, How'd they do that

Apollo Experience Report Michael J. Rutkowski,1972 Analyses were performed to determine the structural loads caused by maneuvers of the docked Apollo command and service module/lunar module (CSM/LM). Results of CSM/LM docked interface loads analyses and service-propulsion-system engine support structure load analyses are compared with the structural allowable loads of the CSM/LM docked interface and the service-propulsion-system engine thrust mount, respectively, for different phases of spaceflight operations. An analysis also was performed to investigate the loads that resulted from the failure case in which the LM descent propulsion system is started in the full-throttle position.

Breaking the Chains of Gravity Amy Shira Teitel,2015-10-22 The incredible story of spaceflight before the establishment of NASA. NASA's history is a familiar story, one that typically peaks with Neil Armstrong taking his small step on the Moon in 1969. But America's space agency wasn't created in a vacuum. It was assembled from pre-existing parts, drawing together some of the best minds the non-Soviet world had to offer. In the 1930s, rockets were all the rage in Germany, the focus both of scientists hoping to fly into space and of the German armed forces, looking to circumvent the restrictions of the Treaty of Versailles. One of the key figures in this period was Wernher von Braun, an engineer who designed the rockets that became the devastating V-2. As the war came to its chaotic conclusion, von Braun escaped from the ruins of Nazi Germany, and was taken to America where he began developing missiles for the US Army. Meanwhile, the US Air Force was looking ahead to a time when men would fly in space, and test pilots like Neil Armstrong were flying cutting-edge, rocket-powered aircraft in the thin upper atmosphere. Breaking the Chains of Gravity tells the story of America's nascent space program, its scientific advances, its personalities and the rivalries it caused between the various arms of the US military. At this point getting a man in space became a national imperative, leading to the creation of the National Aeronautics and Space Administration, otherwise known as NASA.

Marketing the Moon David Meerman Scott,Richard Jurek,2014-02-28 One of the most successful public relations campaigns in history, featuring heroic astronauts, press-savvy rocket scientists, enthusiastic reporters, deep-pocketed defense contractors, and Tang. In July 1969, ninety-four percent of American televisions were tuned to coverage of Apollo 11's mission to the moon. How did space exploration, once the purview of rocket scientists, reach a larger audience than My Three Sons? Why did a government program whose standard operating procedure had been secrecy turn its greatest achievement into a communal experience? In Marketing the Moon, David Meerman Scott and Richard Jurek tell the story of one of the most successful marketing and public relations campaigns in history: the selling of the Apollo program. Primed by science fiction, magazine articles, and appearances by Wernher von Braun on the “Tomorrowland” segments of the Disneyland prime time television show, Americans were a receptive audience for NASA's pioneering “brand journalism.” Scott and Jurek describe sophisticated efforts by NASA and its many contractors to market the facts about space travel—through press releases, bylined articles, lavishly detailed background materials, and fully produced radio and television features—rather than push an agenda. American astronauts, who signed exclusive agreements with Life magazine, became the heroic and patriotic faces of the program. And there was some judicious product placement: Hasselblad was the “first camera on the moon”; Sony cassette recorders and supplies of Tang were on board the capsule; and astronauts were equipped with the Exer-Genie personal exerciser. Everyone wanted a place on the bandwagon. Generously illustrated with vintage photographs, artwork, and advertisements, many never published before, Marketing the Moon shows that when Neil Armstrong took that giant leap for mankind, it was a triumph not just for American engineering and rocketry but for American marketing and public relations.
