*Tiberius, Arapaima, and the Monster Eel* Patrick V. London, 2020-06-02 All seems idyllic in the small village of Winiperu, nestled in the Amazon rainforest among glittering lakes and waterfalls. But one day the fishermen come back empty-handed and afraid. A gigantic eel has swallowed up all the fish! Adventurous 10-year-old Tiberius, and his best friend Sun-Raya, volunteer to set out on a quest to find the prehistoric Arapaima. This fish, that is “bigger than a chicken, bigger than a rabbit, bigger than a sheep, bigger than a cow, bigger than an elephant, and bigger than the Monster Eel” is the only thing that can save the village. On their quest Tiberius, Sun-Raya, and the rest of the volunteers encounter wild animals and other dangers. Will they succeed in bringing the Arapaima safely back home? Can they learn from their experiences? And will Tiberius truly become, as the fortune-teller foretold, the youngest Grand Chief ever? *Tiberius, Arapaima and the Monster Eel* is an exuberant tale of ingenuity and bravery, that will delight young readers. In the words of Tiberius: “Life is an adventure every day. Listen to your heart, love what you do. Dreams do come true.”

**Arapaima** Ellen Lawrence,2020 In the Amazon River lives one of the largest freshwater fish on Earth--the arapaima. This huge river hunter can grow up to 10 feet long and weigh 400 pounds. In its watery home, the arapaima is an apex predator. It hunts for fish and birds, but none of its animal neighbors are large enough or powerful enough to catch this giant fish! Filled with information perfectly suited to the abilities and interests of its primarygrade audience, this colorful, fact-filled book gives readers a chance to learn about the lives of apex predators. The book will also help readers develop their powers of observation and challenge them with activities and critical-thinking questions about the arapaima's physical characteristics, its everyday life, and its hunting abilities.

**Air-Breathing Fishes** Jeffrey B. Graham, 1997-07-04 *Air Breathing Fishes: Evolution, Diversity, and Adaptation* is unique in its coverage of the evolution of air-breathing, incongruously because it focuses exclusively on fish. This important and fascinating book, containing nine chapters that present the life history, ecology, and physiology of many air-breathing fishes, provides an exceptional overview of air-breathing biology. Each chapter provides a historical background, details the present status of knowledge in the field, and defines the questions needing attention in future research. Thoroughly referenced, containing more than 1,000 citations, and well documented with figures and tables, *Air-Breathing Fishes* is comprehensive in its coverage and will certainly have wide appeal. Researchers in vertebrate biology, paleontology, ichthyology, vertebrate evolution, natural history, comparative

physiology, anatomy and many other fields will find something new and intriguing in Air-Breathing Fishes. Offers a complete overview of an important and immensely interesting area of research Provides a perspective of air-breathing fish that spans 300 million years of vertebrate evolution Contains numerous illustrations as well as comprehensive charts Provides a synoptic treatment of all the known air-breathing species with important data on their morphological and physiological adaptations

Advances in Bioinformatics and Computational Biology João C. Setubal, Waldeyr Mendes

Silva, 2020-12-19 This book constitutes the refereed proceedings of the Brazilian Symposium on Bioinformatics, BSB 2020, held in São Paulo, Brazil, in November 2020. Due to COVID-19 pandemic the conference was held virtually. The 20 revised full papers and 5 short papers were carefully reviewed and selected from 45 submissions. The papers address a broad range of current topics in computational biology and bioinformatics.

Genetic Resources of Neotropical Fishes Alexandre W. S. Hilsdorf, Eric M. Hallerman, 2017-06-08

The aim of this book is to systematize and discuss population genetic studies of freshwater fish in a region that harbors the greatest diversity of species among all inland water ecosystems. This volume explores the genetic evaluation for a number of orders, families and species of Neotropical fishes, and provides an overview on genetic resources and diversity and their relationships with fish domestication, breeding, and food production.

Participatory Biodiversity Conservation Cristina Baldauf, 2020-05-13 It has long been claimed that

addressing biodiversity loss and other environmental problems demands a better understanding of the social dimensions of conservation; nevertheless, the active participation of indigenous peoples and local communities (IPLCs) in conservation initiatives is still a challenging and somehow controversial issue. In this context, this book hopes to give voice to other perspectives related to biodiversity conservation beyond the “fortress conservation” model and emphasize one of the pillars of democracy – popular participation. It covers a wide range of environments and issues of special significance to the topic, such as the expansion of culturally constructed niches, protected areas and food security, community-based management, participatory agroforestry, productive restoration and biocultural conservation. The contents also explore the limitations and shortcomings of participatory practices in protected areas, the relationship between the global crisis of democracy and the decline of biocultural diversity, as well as present current discussions on policy frameworks and governance systems for effective participatory biodiversity conservation. In sum, this book provides a comprehensive and realistic perspective on the social dimensions of conservation based on a series of interrelated themes

in participatory biodiversity conservation. The connections between biocultural conservation and the current political and economic environment are highlighted through the chapters and the book closes with a debate on ways to reconcile human welfare, environmental justice and biodiversity conservation.

**Green Materials Engineering** Shadia Ikhmayies, Jian Li, Carlos Mauricio Fontes Vieira, Jean Igor Margem (Deceased), Fabio de Oliveira Braga, 2019-02-18 This book is focused on the engineering of green materials, which comprise natural composites, bio-inspired armors, waste-added clay ceramics, lignocellulosic fibers, and biodegradable polymers.

**Freshwater Biodiversity** David Dudgeon, 2020-05-21 Growing human populations and higher demands for water impose increasing impacts and stresses upon freshwater biodiversity. Their combined effects have made these animals more endangered than their terrestrial and marine counterparts. Overuse and contamination of water, overexploitation and overfishing, introduction of alien species, and alteration of natural flow regimes have led to a 'great thinning' and declines in abundance of freshwater animals, a 'great shrinking' in body size with reductions in large species, and

a 'great mixing' whereby the spread of introduced species has tended to homogenize previously dissimilar communities in different parts of the world. Climate change and warming temperatures will alter global water availability, and exacerbate the other threat factors. What conservation action is needed to halt or reverse these trends, and preserve freshwater biodiversity in a rapidly changing world? This book offers the tools and approaches that can be deployed to help conserve freshwater biodiversity.

**Fishing the World** Steen Ulnits, 2011-09-27 Since first visiting Greenland in 1974 Steen Ulnits has actively sought and added to his list a large number of great game fishes. In his book *Fishing the World* - catching them all he presents a number of fish species that made a lasting impression on him - as a fisheries biologist as well as an eager angler. Read about some of the most sought after game fish species living in exotic surroundings and learn what gave them their current fame. Read about a larger number of lesser known species that also made the Top 50 list of fish worth travelling across

the globe to meet and catch in their natural environment. Some of these species have been hard to catch or hard to reach. But they have all been interesting and well worth the effort. Still Steen Ulnits has a number of species on his list that need to meet his flies and lures and have their picture taken! Join Steen Ulnits on an exciting and inspiring trip around the world, fishing rod in hand!

Chasing Giants Zeb Hogan, Stefan Lovgren, 2023-04-25 Join Zeb Hogan, host of the National Geographic television show *Monster Fish*, on the science adventure of a lifetime. On May 1, 2005, a Thai fisherman caught a truly monstrous Mekong giant catfish. At 646 pounds, it captured the world's attention, and with awe and wonder, it was deemed the largest freshwater fish on record. There was no denying its size, but when biologist and research associate professor Hogan saw a photo of the fish, he wondered if it really was the biggest in the world. To his surprise, no one had systematically sought to answer the question: Which of the giant freshwater species really was the largest? Seeking to answer that question has brought Hogan face to face with massive arapaima and piranha in the Amazon, alligator gar in Texas, pigeon-eating wels catfish in France, stingrays in Cambodia, and the

gnarled-toothed sawfish in Australia. Part of his scientific adventure has been captured on *Monster Fish*, and Hogan now tells the full story of his 25-year quest to understand the mysteries of some of the oldest, largest, most bizarre creatures on Earth. The fate of these giant fish motivates Hogan to understand the various species he studies. The megafish's numbers are dwindling, and the majority of them face extinction. In this book, he teams up with award-winning journalist Stefan Lovgren to tell, for the first time, the remarkable and troubling story of the world's largest freshwater fish. It is a story that stretches across the globe, chronicling a race against the clock to find and protect these ancient leviathans before they disappear forever. *Chasing Giants: In Search of the World's Largest Freshwater Fish* combines science, adventure, and wonder to provide insights into the key role the massive fish of our lakes and rivers play in our past, present, and future.

**Genetics, Evolution, and Conservation of Neotropical Fishes** Rodrigo A. Torres, Roberto Ferreira Artoni, 2020-01-21 Fish represent the most ancestral and specious group of vertebrates, and occupy more diverse aquatic environments around the world. Ichthyofauna is extremely diverse, especially in

megadiverse countries occupying biogeographical regions such as the Neotropical Region, which covers an extensive area between North and South America. Much of this biodiversity will be extinct, even before science knows any aspect of its biology. Like this, Neotropical fish genetics started in the end of the 70's with papers studying the chromosomes of *Hoplias malabaricus* (Family Erythrinidae) and the karyotype variation among three genera of the family Anostomidae. The topic at that time was concentrated in two Institutions from the state of São Paulo, Southeastern Brazil. In the middle 80's, the first Symposium on Neotropical Fish Cytogenetics was organized. Nowadays, the field of Neotropical Fish Genetics is present in Brazil, Colombia, Argentina, Uruguay, Venezuela, Chile, and Ecuador, as well as outside South America in Panama, Mexico, USA, Canada, Czech Republic, Germany, and Spain. The research developed in cytogenetics has focused mainly on karyotype evolution and cytotaxonomy, chromosome structure and, more recently, cytogenomics. In relation to the use of molecular markers, support has been sought for the management of populations for conservation or production in captivity. In addition, many studies have been carried out with the aim of

establishing supra-specific phylogenetic relationships and clarifying species distribution scenarios by phylogeographic modeling. The genome and transcriptome of some model species begin to emerge as extremely promising and informative areas for neotropical fish. In 2017, the Neotropical fish genetics research community celebrates the 30th anniversary of its main Meeting (today entitled Symposium on Neotropical Fish Genetics and Cytogenetics). This Research Topic is part of this celebration and aims at reporting the state of the art and its current advances in the frontier of knowledge in genetics, evolution, and conservation of neotropical fish, as well as to detect the challenges to be overcome in the next years.

Diagnosing Wild Species Harvest Matti Salo, Anders Sirén, Risto Kalliola, 2013-11-20 Diagnosing Wild Species Harvest bridges gaps of knowledge fragmented among scientific disciplines as it addresses this multifaceted phenomenon that is simultaneously global and local. The authors emphasize the interwoven nature of issues specific to the ecological, economic, and socio-cultural realms of wild species harvest. The book presents the diagnosing wild species harvest procedure as a

universal approach that integrates seven thematic perspectives to harvest systems: resource dynamics, costs and benefits, management, governance, knowledge, spatiality, and legacies. When analyzed, these themes help to build a holistic understanding of this globally important phenomenon. Scholars, professionals and students in various fields related to natural resources will find the book a valuable resource. Wild species form important resources for people worldwide, and their harvest is a major driver of ecosystem change. Tropical forests regions, including Amazonia, are among those parts of the world where wild species are particularly important for people's livelihoods and larger economies. This book draws on tangible experiences from Amazonia, presented in lively narratives intermingling scientific information with stories of the people engaged in harvest and management of wild species. These stories are linked to relevant theory of wild species harvest and wider discussions on conservation, development, and the global quest of sustainability. Includes research and report-style narratives describing a wide variety of concrete cases Addresses wild species harvest from a holistic perspective including ecological, economic and socio-cultural issues, not limiting the scope to a

single type of resources Provides theoretical treatment of wild species harvest worldwide, with special emphasis in the most recent scientific understanding on the biodiversity of the Amazonian lowland region Presents an objective viewpoint, noting problems the harvest may cause as well as its potential to contribute both to biodiversity conservation and to local livelihoods and national economies Coherent, easily followed structure and abundant illustrations help the reader absorb central messages

**No Boundaries** Gabby Salazar, Clare Fieseler, 2022-02-01 Meet 25 female explorers and scientists in these inspirational and poignant stories of exploration, courage, and girl power. Along the way, they share lessons learned and words of wisdom sure to inspire the next generation of scientists, adventurers, and world-changers. Track a volcanologist as she braves the elements atop an active volcano. Travel alongside a mountaineer as she battles stereotypes—and frostbite—to conquer the famed Seven Summits. Join a conservationist on her passionate fight to save lions. Dig with a paleontologist to uncover massive dinosaur fossils, bit by breathtaking bit. These heartfelt stories give readers an insider's look at the amazing work female explorers at National Geographic—and

beyond—are doing in the field to solve some of the world's toughest problems. Rather than detailing the lives of well-known women, this anthology celebrates lesser-known changemakers and outstanding women of diverse backgrounds, nationalities, and fields of study who are just beginning to make a name for themselves. Each profile is based on first-person interviews and comes paired with useful tips and relatable advice for budding explorers and scientists. Stunning photography and fascinating general interest information about the animals, places, and practices add drama and context. No Boundaries sends a positive message to every girl who has ever dreamed or dared to go a little further. And although these explorers' endeavors are quite adventurous, the lessons they share can inspire all girls, as well as boys, whatever their goals, skills, and interests.

Fishes of the Amazon and Their Environment A.L. Val,V.M.F.de Almeida-Val,2012-12-06 The Amazon is a giant piece of amphibian land which is the result of complex geological and evolutionary processes. The number of living beings in such a land is difficult to estimate. The interactions between these organisms and the environment are fascinating but barely understood. These features lured us

to the Amazon in 1981. However, soon after, we realized that the dimensions of these interactions were overwhelming. This book is designed to review aspects of the physiology and biochemistry of fishes of the Amazon. The description of the pulsative nature of the environment and the distinct features of the ichthyofauna of the Amazon were central to the main goal. Nevertheless, any complete view is limited by the magnitude of the intraspecific variability coupled with the complex fluctuations of the environment. Thus, we have placed an emphasis on respiratory physiology and biochemistry. The reference list was made as complete as possible, particularly regarding special publications not readily available. We hope that this book is useful for comparative physiologists, tropical biologists, and the people interested in interactions between organisms and their environment. We are grateful to many people who contributed to the making of this book. Our initial ideas were influenced by Drs. Arno Schwantes, Maria Lufza Schwantes, Jose Tundisi, Anna Emília Vazzoler, and Naercio Menezes.
