Forged in War Gary E. Weir, 1993 This book is the first to analyze the partnership between the Navy, industry, and science forged by World War II and responsible for producing submarines in the United States in the period from 1940 through 1961. The naval-industrial complex was not the result of a single historical event. Neither was it a political-economic entity. Instead it was made up of many unique and distinct components, all of which developed simultaneously; each reflected the development, significance, and construction of a particular vessel or technology within its historical context. Together these components emerged from World War II as a network of distinct relationships linked together by the motives of national defense, mutual growth, and profit. None of the major players in the drama planned or predetermined the naval-industrial complex, and it did not conform to the views of any individual or confirm the value of a particular system of management. Instead it grew naturally in response to the political environment, strategic circumstances, and perceived national need, its character defined gradually not only by the demands of international conflict but also by the scores of talented people interested in the problems and possibilities of submarine warfare. Their combined efforts during this short period of time produced remarkable advances in nuclear propulsion, submerged speed, quieting, underwater sound, and weaponry, as well as a greater appreciation within the Navy and the shipbuilding industry for the ocean environment. This book won the Roosevelt Prize for naval history.

Building American Submarines, 1914-1940 Gary E. Weir, 2000-04 In this volume, Gary E. Weir assesses the Navy's efforts between 1914 and 1940 to develop effective submarines. In particular, the author describes the work of the Navy and private industry that allowed the relatively primitive submersible of the First World War period to be replaced by the fleet submarine that fought in the Second World War.Building American Submarines argues that there was a fundamental shift in the relationship between the Navy and its submarine suppliers during this period. After being completely dependent upon private industry in 1914, the Navy - not industry - controlled the design and construction process by the eve of the Second World War.. As a result, the Navy was able to acquire high-quality submarines to fulfill the nation's strategic requirements. When we entered the Second World War, these new submarines were ready to undertake prolonged and effective antishipping operations in distant waters. That capability was of enormous importance in the ensuing triumph of American sea power over Imperial Japan. In tracing these developments, the author provides insights into the goals of the naval submarine submarine leaders, the evolution of the American submarine industry, the influence of German underseas technology, and strategic requirements foreseen by naval planners. The Navy's historians hope that this case study of the problems and successes involved in a major weapons acquisition program will be of particular interest to naval personnel involved in that process today, as well as to representatives of the industrial firms that supply the needs of the modern Navy.

The Naval Arms Trade Ian Anthony,1990 This book offers a sober appraisal of the world trade in naval weapon systems at a time when recent attacks on merchant shipping in the Persian Gulf have kept maritime security at the centre of global attention. At the same time India, outside the international non-proliferation regime, has become the first-ever customer for a nuclear attack submarine. In 1987-88, the most expensive and controversial arms sales were related to naval systems, and yet while regional navies are busy increasing their firepower, the traditional naval powers remain dependent on their sea-borne trade. In particular the book highlights critical areas in which trade in naval systems differs from the sale of

land or air systems, and it discusses the implications of these differences.

Cold War Submarines Norman Polmar, Kenneth J. Moore, 2014-05-14 Submarines had a vital, if often unheralded, role in the superpower navies during the Cold War. Their crews carried out intelligence-collection operations, sought out and stood ready to destroy opposing submarines, and, from the early 1960s, threatened missile attacks on their adversary's homeland, providing in many respects the most survivable nuclear deterrent of the Cold War. For both East and West, the modern submarine originated in German U-boat designs obtained at the end of World War II. Although enjoying a similar technology base, by the 1990s the superpowers had created submarine fleets of radically different designs and capabilities. Written in collaboration with the former Soviet submarine design bureaus, Norman Polmar and K. J. Moore authoritatively demonstrate in this landmark study how differing submarine missions, antisubmarine priorities, levels of technical competence, and approaches to submarine design organizations and management caused the divergence.

S 71 INS CHAKRA Cmde Arun Kumar,2021-09-15 This book is the firsthand account of the first nuclear powered submarine of the Indian Navy, a Charlie class SSGN, leased from the USSR for three years, 1988 - 1991. The lease of the SSGN enabled the Indian Navy to base, maintain and operate nuclear powered submarines. It also facilitated development of design for indigenous construction of atomic submarines. An ecosystem for radiation monitoring, safety services and waste management was also created. The author was associated with the submarine from selection of the crew to the return of the submarine. The training of the crew in Vladivostok from 1983 - 1986 is detailed in Part 1 and the commissioning in Jan 1988 and exploitation of the boat in India till its return to the USSR in Jan 1991 is illustrated in Part 2. Cmde Arun Kumar graduated from the National Defence Academy in Dec 1971 and was commissioned in the rank of Sub Lt on 01 Jul 1973. He joined the Submarine Arm in May 1975 and served for 28 years in the arm eventually swallowing the anchor as a Cmde in May 2004. In the submarine arm the officer has held all major appointments. He commanded two Kilo class boats INS Sindhuraj, INS

Sindhughosh. He also held command of the submarine base INS Virbahu, Submarine School, INS Satavahana and as COMSUB East Commanded the 8th and 11th submarine Squadrons as also the 10th Submarine Squadron as Capt SM. He played an important part in the growth of the Arm as The Principal Director Submarine Acquisition in steering the 30 year SM building Plan at NHQ in his last appointment. The officer also commanded the missile destroyer INS Rajput. The Officer also graduated in Basic Submarine Course, Long Navigation and Direction Course, Submarine COQC standing first in all. He also underwent the Defence Services Staff and Naval Higher Command and Defence Management courses with distinction. He was selected for nuclear submarine training in Aug 1982 and completed the 30 months (Oct 83-Apr 1986) training in Vladivostok, USSR. He was part of the Commissioning and Decommissioning crew of Chakra as the First Lt and Executive Officer respectively. For his dedicated services of exceptionally high order, he was decorated twice by the President of India with Nau Sena Medal (NM) and Ati Vishisht Seva Medal (AVSM) in 1991 and 2003 respectively.

The Fleet Submarine in the U.S. Navy John Doughty Alden,1979 This book has long been considered the definitive study of the fleet submarine, one of the most successful types of warships ever built. It presents a comprehensive analysis of the submarine's design, construction, and development. The author traces its metamorphosis from the T and V classes through wartime boats and postwar Guppy and other conversions up to the 1980s. Dozens of rare photos, profile line drawings, a detailed type plan, and statistical appendixes complement the text in this large format book. The book's wealth of technical data is offered in a frame of historical reference that will appeal to the general reader and World War II history buffs as well as serious students of the submarine.

Words And Arms: A Dictionary Of Security And Defense Terms Wolfram F Hanrieder,2019-03-15 This comprehensive dictionary of terms frequently used in discussions of national security and defense policy contains approximately 800 entries on weapons systems, strategy concepts, military organization, and related items. Part 2 presents a more extensive treatment of such concepts as strategic force doctrine and deployment, Soviet and U.S. poli

Forged in War Gary E. Weir,1998-06-01 The first book to analyze the critical partnership among the Navy, industry, and science forged by WW2 and responsible for producing submarines in the U.S. until 1961. That conflict not only integrated the Navy and the submarine industry, but also promoted the involvement of many scientists who had the expert knowledge to develop submarine designs, systems, and instrumentation. The intimate professional relationships forged by global war, and the sense of purpose and urgency during the later cold War, led to a period of remarkable innovation and productivity in the 16 years after 1945. 41 photos. <u>Transition to Guardianship: The Indian Navy 1991–2000</u> Vice Admiral GM Hiranandani, <u>Competitive Arms Control John D. Maurer, 2022</u> The essential history of the Strategic Arms Limitation Talks (SALT) during the Nixon Administration How did Richard Nixon, a president so determined to compete for strategic nuclear advantage over the Soviet Union, become one of the most successful arms controllers of the Cold War? Drawing on newly opened Cold War archives, John D. Maurer argues that a central purpose of arms control talks for American leaders was to channel nuclear competition toward areas of American advantage and not just international cooperation. While previous accounts of the Strategic Arms Limitation Talks (SALT) have emphasized American cooperative motives, Maurer highlights how Nixon, National Security Advisor Henry Kissinger, and Secretary of Defense Melvin Laird shaped negotiations, balancing their own competitive interests with proponents of cooperation while still providing a coherent rationale to Congress. Within the arms control agreements, American leaders intended to continue deploying new weapons, and the arms control restrictions, as negotiated, allowed the United States to sustain its global power, contain communism, and ultimately prevail in the Cold War.
