American Wheeled Armoured Fighting Vehicles Michael Green,2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the "Stryker". To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

M113: American Armoured Personnel Carrier Ben Skipper,2021-03-23 The M113 has become as much a recognizable part of the US military machine at war as the Bell UH-1 Iroquois and M16 assault rifle. Earning its stripes in the jungles and highlands of Vietnam, it became the most widely armored vehicle of the campaign. Such was its prowess that the Viet Cong gave it the nickname Green Dragon on account of its ability to go virtually anywhere. Its groundbreaking aluminum hull gives the M113 a relatively low weight of 12ts, this allows it to be easily transported by air and gives it an amphibious ability. The design was also easy to modify and can carry a range of support and indirect fire weapons. From mortars to ballistic missiles, the M113 spawned a progeny of useful and innovative vehicles. The base M113 is lightly armored and safe against only the lightest of small arms fire and shell splinter. As a result a range of up-armor packages have been used in the past, from sandbags to complex appliqué armor. 80,000 M113s of all types have been produced and are in use with over 50 countries, making it one of the most widely used armored fighting vehicles to be produced. Indeed such was its popularity that the US bought their final M113s in as late as 2007. The M113 was designed and developed by the Food Machinery Corporation (FMC) to replace the heavier and less reliable steel-bodied M59 and M75 armored personnel carriers. It was specifically designed to be lighter, air-portable and have amphibious capability. Carrying a crew of two, driver and commander, who manned the M113's only weapon, a .50cal machine gun, the M113 would transport 11 soldiers into combat before withdrawing to the rear. Powered initially by a V8 petrol engine the M113 would be continuously up-engined throughout its frontline and subsequent rear support lifespan. Changes included improved suspension, smoke dischargers and externally fitted fuel tanks. Other changes have included armored commander's turrets and slat armor. This LandCraft title looks at the M113s development where the FMC sought to utilize its chassis into as many roles as possible, from smoke generators to flamethrowers. The book also looks at how the M113 was adapted for use by numerous overseas customers and how these are upgraded to suit local conditions. Finally the title looks at the M113's changing roles in the more sophisticated contemporary battlescape and how it's still providing service in theatres across the world in a variety of roles, both combat and support. For the modeler there is nothing more important than the little things and this image-rich section of Land Crafts M113 title delivers the goods. Filled with crisp photos that show the M113's many details, combined with helpful accompanying text, forms an enviable visual guide for the enthusiast and modeler alike.

Chobham Armour William Suttie,2022-10-27 A comprehensive overview of the work of the Military Vehicles Research and Development Establishment on Chobham Common, which provided armoured vehicles for the British Army from 1945 to its close in 2004. Through much of World War II British tanks and armoured vehicles were outmatched by the German tanks they encountered and this led to the British Army placing much emphasis on ensuring that the same situation would not arise again if the Cold War turned hot. The task of developing the Main Battle Tanks and supporting armoured vehicles to out-range and quickly destroy the Soviet threat fell to the scientists and engineers at the Fighting Vehicle Research and Development Establishment on Chobham Common near to Chertsey. It was the design authority for all British Military vehicles for most of the period. Military vehicle and equipment expert William Suttie draws extensively on official MOD reports to tell the story of the development of the British Cold War armour, such as the Centurion, Chieftain, Challenger, and many other wheeled and tracked armour vehicles that served the British Army of The Rhine. The vehicles developed at the Chertsey site were never used for their intended purpose on the plains of North-west Germany, but have proved their worth in British operations in places like Korea, Bosnia, Kuwait, Iraq and Afghanistan, as well as in the hands of other users around the world. Fully illustrated with photographs, schemes and drawings, including some that have never been published before, this is a unique detailed overview of the development of all post-war British armoured vehicles.

The Encyclopedia of Tanks and Armoured Fighting Vehicles Christopher F. Foss,2002 Tanks and armoured fighting vehicles have revolutionised modern warfare, dominating the battlefield in conflicts all over the world with their firepower, armour and mobility. Featured in this book are over 900 tanks, armoured personnel carriers, self-propelled guns, reconnaissance vehicles and armoured cars.

US Cold War Tanks and Armoured Fighting Vehicles Michael Green,2019-08-30 This expert study of the U.S. military's armored vehicles deployed during the Cold War features rare photographs from the wartime archives. To counter the Soviet threat and that of their client States during the Cold War years 1949-1991, the American military deployed an impressive range of main battle tanks and armored fighting vehicles. Expert author Michael Green presents a detailed study of these vehicles and their variants in this informative volume of stunning wartime photographs. The Patton series of medium main battle tanks—including the M46, M47 and M48—supplemented by the M103s Heavy Tank initially formed the core of the US tank fleet. In 1960 the M60 MBT entered service and, in turn, was replaced by the M1 Abrams in 1980. In support were armored reconnaissance vehicles, progressively the M41 bull dog (1951); the M114 (1961), the M551 Sheridan (1967) and M3 Bradley Cavalry Fighting Vehicle (1981). The armored personnel carrier range included the ubiquitous M113 and its replacement the M2 Bradley, cousin of the M3. All of these vehicles are covered in this highly detailed volume in the Images of War series.

Universal Carrier 1936-48 David Fletcher,2012-05-20 The Universal Carrier was a fast, lightly armed vehicle developed by the British Army to carry infantry across ground defended by small-arms fire, specifically the Bren light machine gun, hence the name 'Bren Gun Carrier'. This name would stick with the Universal Carrier and all of its future variants. This book details the Carrier, which was employed in a number of roles including carrying ammunition and towing anti-aircraft guns and trailers. All Allies used the Universal Carrier extensively during practically every World War II campaign. By the war's end, the Universal Carrier had proved itself to be an invaluable and successful cross-country vehicle that was both agile and fast for its time.

Armoured Warfare in the Vietnam War Michael Green,2014-10-30 This pictorial history of the Indochina and Vietnam Wars captures the range of armored warfare used in the region through rare wartime photographs. The two conflicts that engulfed Indochina and Vietnam in the decades after World War II are generally thought of as infantry wars. But in fact, they both involved a significant amount of armored warfare. In this fully illustrated volume, military expert and Vietnam veteran Michael Green describes the many kinds of armored vehicles deployed and their contributions in combat. The ill-fated French Expeditionary Force of the Indochina War was largely equipped with World War II era American tanks—including M3 and M5 Stuart, M4 Sherman and M24 light tanks—as well as armored cars and half-tracks. Most of these eventually went to the Army of the Republic of Vietnam, but were outdated and ineffective due to lack of logistics and training. The US Army and Marine Corps build-up in the 1960s saw vast quantities of M48 Pattons, M113 APCs and many specialist variants and improvised armored vehicles arrive in the theatre. The Australians also brought their British Centurion tanks. But it was the Russians, Chinese and North Vietnamese who won the day and their T-38-85 tanks, ZSU anti-aircraft platforms.

Allied Armoured Fighting Vehicles of the Second World War Michael Green,2017-04-30 Expert author Michael Green has compiled a full inventory of the armored fighting vehicles developed and deployed by the Allied armies during the six year war against Nazi Germany and her Axis partners.Tank destroyers included the US Army's M18 Hellcat and M36 Jackson, the British Archer and Achilles and the Soviets SU-85, SU-100 and SU-122.Self-propelled artillery vehicles provide indirect fire support. Examples of these were the British Bishop and Sexton, the US M7 Army Priest and The Red Armys SU-152 Beast Slayer.For reconnaissance the Allies fielded armored cars and scout cars such as the Daimler Dingo, the US M8 Greyhound and T17 Staghound, and the Russian BA-10, -20 and -64.AFVs such as the British full tracked Universal Carrier and US M3 halftracks were fitted with a range of weapon systems, such as mortars or machine guns.All these and many more AFVs are expertly described in words and captioned images in this comprehensive work which is the companion volume to the authors Allied Tanks of the Second World War.

Axis Armoured Fighting Vehicles of the Second World War Michael Green,2018-03-30 During the Second World War the Axis powers, most prolifically the Germans, deployed a vast array of armored fighting vehicles to support their tanks and infantry. These included tank destroyers, reconnaissance vehicles, flame-thrower vehicles, and self-propelled artillery pieces. Armored tank destroyers, such as the Marder series, the Nashorn, Jagdpanther, Jagdtiger and the turretless German Stu III series (based on the Panzer III medium tank), helped the Nazis overcome their shortage of tanks. Copying the Stu III series the Italians created the turretless Semovente da 75/18 assault gun and the Hungarians the turretless Zrinyi. In the role of self-propelled artillery the German fielded the Hummel, the Wespe and the Grille while the Brummbar and the Sturmtiger performed in the dedicated assault gun role. For armored reconnaissance German industry came up with a series of capable armored cars; examples were the eight-wheel Puma and the full-tracked Luchs reconnaissance tank. The Italians developed the impressive four-wheel Autoblinda armored cars. Specialized antiaircraft tanks such the Möbelwagen, Wirbelwind and the Ostwind gave some protection against the ever more powerful Allied air forces. This fine book covers all these variants and many more besides in words and rare images and will delight readers, collectors, model-makers and war-gamers.
