**Tanks and Other Armoured Fighting Vehicles of World War II** Brian Terence White,1983-10-01 Shows tanks, armored cars, command vehicles, carriers, and reconnaissance vehicles used by the Allied and Axis powers and recounts the development and use of each vehicle

**Armored Fighting Vehicles** Philip Trewhitt,1999 Each vehicle featured is illustrated by a full-color side-profile artwork, and accompanied by a detailed specifications table giving country of origin, crew, weight, dimensions, armor, armament, powerplant, and performance, all measurements in imperial and metric. In addition, there is accompanying text for each vehicle that summarizes the vehicle's development and service history--Jacket.

**Stryker Combat Vehicles** Gordon L. Rottman,2012-09-20 The eight-wheeled (8x8) Stryker combat light armored vehicle was adopted by the US Army in 2002 to provide a comparatively rapidly deployable contingency force with armor protection, tactical mobility, and heavy firepower, as well as advanced command, control communications, computer, intelligence, surveillance, and reconnaissance (C4ISR) capabilities. Covering the first new US Army release since the M1 Abrams MBT, this book details the conception, ongoing development and deployment of one of the most highly anticipated new AFVs in recent years, including its service in Iraq and the ensuing controversy surrounding the Stryker's varying successes.

**American Wheeled Armoured Fighting Vehicles** Michael Green,2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the "Stryker". To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

**German Reconnaissance and Support Vehicles, 1939–1945** Paul

Thomas, 2018-09-30 This WWII pictorial history illustrates the full range of Nazi vehicles used in reconnaissance and support missions throughout the war. The German military used reconnaissance and support vehicles widely in the Second World War. This book illustrates the full range of these vehicles with authoritative information and more than 200 rare wartime photographs. Both tracked and wheeled vehicles were employed for reconnaissance and screening. These included light tanks such as the Panzer I and Panzer II, armored cars such as the six- and eight- wheeled Schwerer Panzerspähwagen, and motorcycles such as the famous BMW R75 or the Zundapp KS750. In addition to their recon role they would, on occasion, engage similar light units. Support vehicles such as the tracked Sd.Kfz.2 Kettenkrad, and the renowned Sd.Kfz.251 halftracks were used in the follow-up role, frequently with mounted grenadiers to mop up over-run enemy positions.

Armor Command: The Personal Story of a Commander of the 13th Armored Regiment Brig.-Gen. Paul McDonald Robinett, 2017-07-11 "Armor Command is a candid book presenting the activities and observations of an armor commander who was among the first overseas and in action against the European Axis in World War II. All who are interested in the activities of combat troops that make or break the reputations of high military figures and all those who desire an understanding of life in the combat zone will find this book of compelling interest. Military men will find it of professional value for it deals with the problems of a small command in the initial campaign against the German-Italian Allies. Among other things it deals with the problems of the meeting engagement and the withdrawal—two of the most difficult operations in war."—Foreword

**M8 Greyhound Light Armored Car 1941–91** Steven J. Zaloga, 2012-09-20 The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

*Chobham Armour* William Suttie, 2022-10-27 A comprehensive overview of the work of the Military Vehicles Research and Development Establishment on Chobham Common, which provided armoured vehicles for the British Army from 1945 to its close in 2004. Through much of World War II British tanks and armoured vehicles were outmatched by the German tanks they encountered and this led to the British Army placing much emphasis on ensuring that the same situation would not arise again if the Cold War turned hot. The task of developing the Main Battle Tanks and supporting armoured vehicles to out-range and quickly destroy the Soviet threat fell to the scientists and engineers at the Fighting Vehicle Research and Development Establishment on Chobham Common near to Chertsey. It was the design authority for all British Military vehicles for most of the period. Military vehicle and equipment expert William Suttie draws extensively on official MOD reports to tell the story of the development of the British Cold War armour, such as the Centurion, Chieftain, Challenger, and many other wheeled and tracked armour vehicles that served the British Army of The Rhine. The vehicles developed at the Chertsey site were never used for their intended purpose on the plains of North-west Germany, but have proved their worth in British operations in places like Korea, Bosnia, Kuwait, Iraq and Afghanistan, as well as in the hands of other users around the world. Fully illustrated with photographs, schemes and drawings, including some that have never been published before, this is a unique detailed overview of the development of all post-war British armoured vehicles.

**Befehlspanzer** Riccardo Niccoli, 2014 This book is dedicated to the command and observation tanks of the German Army in World War Two. It deals with their history, operational use, organization, special markings, technical description, serial numbers (when available), and data on the radio equipment. The book is completed by some 105 color profiles, produced by Jean Restayn, and by about 65 black and white historic photographs. A must for any enthusiast of the German military and of the Second World War, and a unique reference for all the serious modelers.

*M113: American Armoured Personnel Carrier* Ben Skipper, 2021-03-23 The M113 has become as much a recognizable part of the US military machine at war as the Bell UH-1 Iroquois and M16 assault rifle. Earning its stripes in the jungles and highlands of Vietnam, it became the most widely armored vehicle of the campaign. Such was its prowess that the Viet Cong gave it the nickname Green Dragon on account of its ability to go virtually anywhere. Its groundbreaking aluminum hull gives the M113 a relatively low weight of 12ts, this allows it to be easily transported by air and gives it an amphibious ability. The design was also easy to modify and can carry a range of support and indirect fire weapons. From mortars to ballistic missiles, the M113 spawned a progeny of useful and innovative vehicles. The base M113 is lightly armored and safe against only the lightest of small arms fire and shell splinter. As a result a range of up-armor packages have been used in the past, from sandbags to complex appliqué armor. 80,000 M113s of all types have been produced and are in use with over 50 countries, making it one of the most widely used armored fighting vehicles to be produced. Indeed such was its popularity that the US bought their final M113s in as late as 2007. The M113 was designed and developed by the Food Machinery Corporation (FMC) to

replace the heavier and less reliable steel-bodied M59 and M75 armored personnel carriers. It was specifically designed to be lighter, air-portable and have amphibious capability. Carrying a crew of two, driver and commander, who manned the M113's only weapon, a .50cal machine gun, the M113 would transport 11 soldiers into combat before withdrawing to the rear. Powered initially by a V8 petrol engine the M113 would be continuously up-engined throughout its frontline and subsequent rear support lifespan. Changes included improved suspension, smoke dischargers and externally fitted fuel tanks. Other changes have included armored commander's turrets and slat armor. This LandCraft title looks at the M113s development where the FMC sought to utilize its chassis into as many roles as possible, from smoke generators to flamethrowers. The book also looks at how the M113 was adapted for use by numerous overseas customers and how these are upgraded to suit local conditions. Finally the title looks at the M113's changing roles in the more sophisticated contemporary battlescape and how it's still providing service in theatres across the world in a variety of roles, both combat and support. For the modeler there is nothing more important than the little things and this image-rich section of Land Crafts M113 title delivers the goods. Filled with crisp photos that show the M113's many details, combined with helpful accompanying text, forms an enviable visual guide for the enthusiast and modeler alike.

**Stryker Interim Combat Vehicle** David Grummitt, 2021-01-13 This illustrated modeling guide reviews the full range of kits and accessories available to model the Stryker and LAV III in all the major scales. The Stryker interim combat vehicle was a stop-gap measure, designed to help the United States project its military force in hotspots around the world. First deployed in Iraq in 2003, it has since proved itself an integral part of the US's warfighting capability. Today the Stryker has been adapted to face the new threat of a resurgent Russia. This volume in the LandCraft series of modeling guides examines the Stryker and LAV III in US, Canadian and New Zealand service. In addition to describing the design, development, and operational history of the Stryker and LAV III, David Grummitt gives a full account of available modeling kits and accessories. Six builds are featured, covering the most important variants. Detailed color profiles provide both reference and inspiration for modelers and military enthusiasts alike.

So successful was this half-track that not only did a modified version of it remain in use with Czech forces well into the 1980s but also, ironically, the armoured infantry tactics that the Germans pioneered with it were adopted by Allied forces in the Second World War and helped them to achieve the eventual defeat of Germany.
