Lea Transit Compendium ,1976

Europe's Greatest Tramways Network ,1968

The Gas Tramcar John Hannavy,2023-02-16 The Gas Tram was a short-lived phenomenon which briefly seemed to herald a new way forward in tramcar design, replacing horses and steam locomotives on the streets with quieter and smoother travel. One of the major advantages of the gas tram, according to those who proposed it, was the low capital cost of the conversion, and all without the need to install the expensive overhead catenary required for electric traction. Designs for gas tramcars were patented all over the world, and systems were briefly operated in Germany, Australia, Holland, Switzerland and the UK, and proposed in France, New Zealand and the USA. The fuel was invariably domestic 'town gas' drawn from the local gasworks, and the vehicles were said to be very cheap to run. This was a development which was probably a century ahead of its time – with twenty-first century gas systems, using much greener biomethane as a fuel, currently being developed in the UK, Korea, China and elsewhere, and biomethane-fuelled trams already in service in Dubai and Aruba. Derived from the natural decomposition of organic waste which would otherwise be released into the atmosphere, biomethane is a clean and green alternative to fossil fuels. Other vehicles, using hydrogen fuel cells to generate electricity, are being developed in several countries. This book – the first ever comprehensive history of these vehicles – uses many previously unpublished photographs, drawings and patents.

Rail Vehicle Technology Joachim Ihme, 2022-06-03

In addition to the legal principles, driving resistances, drives, brakes, running dynamics and running gears as well as the supporting structures and superstructures are dealt with. Great importance is attached to clear illustrations and numerous examples. With the help of this book, even engineers and railway enthusiasts from other disciplines can successfully familiarize themselves with the field of railway vehicle technology. The present edition has been revised and supplemented by the chapter Engineering in rail vehicle construction.

Urban Transport XIV C. A. Brebbia, 2008

Transportation in cities, with its related environmental and social concerns continues to be a topic of the utmost priority for urban authorities and central governments around the world. Frequently, the concern is not orderly but driven by the safety crises, which take place regularly, and even the best-planned urban transport systems require considerable studies to safeguard their safety, maintenance and operational use. On a broader front, the continuing need for better urban transport systems in general and the need for a healthier environment has led to an increased level of research around the world. This is reflected in the proceedings of the Thirteenth International Conference on Urban Transport and the Environment in the 21st Century, which stresses the continuous steady growth and research into the urban

transport systems control aspects, information and simulation systems. All these topics continue to be of importance for analyzing the complex inter-relation of the urban transport environment and for establishing action strategies for transport and traffic problems. Of interest to engineers, scientists and managers working in industry, universities, research organizations and government involved in the planning and management of urban transportation systems and transport policy, this book contains papers within the following subject areas: Environmental and ecological considerations; Information systems and GPS applications; Intelligent transport systems; Intermodal passenger transport systems; Land use and transport integration; Modality in freight; Public transport systems; Road pricing; Traffic management; Transport automation; Transport logistics and operations research; Transport modelling and simulation; Transport security and safety; Transport sustainability; Transport technology; Urban transport planning.

Democratic Planning and Social Choice Dilemmas
Tore Sager, 2020-07-24 Using the economic approach of social choice theory, this unique book examines difficulties found in democratic processes involved in the creation and implementation of planning policies. Social choice theory focuses on the hard trade-offs to be made between rationality in decision-making on the one hand, and political values such as democracy, liberalism and freedom from manipulation on the other. As an institution can be seen as a set of rules, the focus on rules and procedures of collective choice makes social choice theory well suited for analysing important political aspects of planning institutions. Special attention is given to communicative planning and the logical reasons why all the desirable properties of dialogue cannot be simultaneously attained. The analysis provides original and significant new insights into the process and the institutions involved. It highlights weak spots of present planning techniques and procedures and suggests further steps towards institutionally enriched planning theory.
