The Asian Giant Hornet Susan Cobey,Timothy Lawrence,Michael Jensen,2020 The Asian giant hornet (AGH) or Japanese giant hornet, *Vespa mandarinia*, recently found in British Columbia, Canada, and in Washington State, poses a significant threat to European honey bee (EHB), *Apis mellifera*, colonies and is a public health issue. The AGH is the world's largest species of hornet, native to temperate and tropical low mountains and forests of eastern Asia. It appears the hornet is well adapted to conditions in the Pacific Northwest. If this hornet becomes established, it will have a severe and damaging impact on the honey bee population, the beekeeping industry, the environment, public health, and the economy. It is critical that we identify, trap, and attempt to eliminate this new pest before it becomes established and widespread. Here, we will cover how the AGH will impact the honey bee, give the reader a better understanding of the hornet, outline precautions to take, and first aid if attacked by the hornet.

Full-color photographs show these terrifying creatures up close and personal, displaying just how large they are and what makes them so deadly to animals of all kinds.

Wicked Bugs Amy Stewart,2011-05-03 In this darkly comical look at the sinister side of our relationship with the natural world, Stewart has tracked down over one hundred of our worst entomological foes—creatures that infest, infect, and generally wreak havoc on human affairs. From the world's most painful hornet, to the flies that transmit deadly diseases, to millipedes that stop traffic, to the "bookworms" that devour libraries, to the Japanese beetles munching on your roses, *Wicked Bugs* delves into the extraordinary powers of six- and eight-legged creatures. With wit, style, and exacting research, Stewart has uncovered the most terrifying and titillating stories of bugs gone wild. It's an A to Z of insect enemies, interspersed with sections that explore bugs with kinky sex lives ("She's Just Not That Into You"), creatures lurking in the cupboard ("Fear No Weevil"), insects eating your tomatoes ("Gardener's Dirty Dozen"), and phobias that feed our (sometimes) irrational responses to bugs ("Have No Fear"). Intricate and strangely beautiful etchings and drawings by Briony Morrow-Cribbs capture diabolical bugs of all shapes and sizes in this mixture of history, science, murder, and intrigue that begins—but doesn't end—in your own backyard.

Shady Characters: Plant Vampires, Caterpillar Soup, Leprechaun Trees and Other Hilarities of the Natural World Paul Hetzler,2018-09-21 Paul Hetzler is the kind of naturalist with whom you would love to walk in the woods. He knows so much about nature in all its wonders, complexities, and hilarities, and weaves considerable wit into his broad range of wisdom. This book is a classic, to be valued for hundreds of bits of natural science and lore unknown to the average person. Read one page and you will be hooked!
