Soviet/Russian Armor and Artillery Design Practices ,1995

In the Middle of the Fight David Eugene Johnson,Adam Grissom,Olga Olikar,2008 An analysis of the performance of medium-armored forces across the range of military operations since World War I yields insights with significant implications for U.S. Army decisions about fielding these units in the future. The authors find that medium-armored forces fare poorly against competent, heavily armored opponents, and that the Stryker and Future Combat Systems will not fill the void created by the retirement of the M551 Sheridan.

The Soviet Airborne Experience David M. Glantz,Combat Studies Institute (U.S.),1984 Contents: The Prewar Experience; Evolution of Airborne Forces During World War II; Operational Employment: Vyaz'ma, January-February 1942; Operational Employment: Vyaz'ma, February-June 1942; Operational Employment: On the Dnepr, September 1943; Tactical Employment; The Postwar Years.

NATO and Warsaw Pact Armoured Fighting Vehicles of the Cold War Michael Green,2024-01-30 While tanks were the most recognized armored vehicles during the Cold War, NATO and Warsaw Pact (WP) armies fielded a wide array of armored fighting vehicles (AFVs). These included armored cars, armored personnel carriers (APCs), anti-aircraft vehicles and self propelled artillery. Over the Cold War years nations both progressively developed series of AFVs and introduced entirely new ranges. APCs, vital to all frontline units, evolved from machine gun-armed battlefield taxis such as the US M113 and Soviet BTR-60 series into sophisticated infantry fighting vehicles. The Soviet BMP-1, US Bradley M2/M3, West German Marder and British Warrior and CVR series were classic examples of the latter, with numerous variants. The Soviet BRDM-2 series was the most numerous armored car. The British Army fielded the Saladin, Ferret and Fox and the German Army introduced the eight-wheeled Luchs and tracked SPZ11-2 Kurz. Early anti-aircraft vehicles, such as the American M42 with two 40mm Bofors, were superseded by the formidable Soviet ZSU-23-4 Shilka and the West German Gepard with radar-guided guns. This authoritative and superbly illustrated book covers the full range of AFVs in service with NATO and WP armies over the four decades of the Cold War. It will be an invaluable addition to the libraries of the expert and layman alike.

Tanks and Combat Vehicles of the Warsaw Pact Russell Phillips,2017-08-22 When East and West survived on a knife-edge between peace and war, both sides were busy preparing themselves for military action. But what exactly would NATO's troops have faced if the Cold War had suddenly turned hot? Tanks and Combat Vehicles of the Warsaw Pact is a fascinating reference book looking at the wide variety of combat vehicles which were poised and ready for action throughout the long years of military stand-off. Led by the Soviet Union, the nations which formed the Warsaw Pact were as innovative as they were prepared and these deadly war machines had the potential to change the course of world history forever. Find out more about these combat vehicles from how they worked to what they would have been capable of if they had been used in military action against NATO. Tanks and Combat Vehicles of the Warsaw Pact details more than 100 military vehicles from the 2P26 Baby Carriage - a compact Soviet off-road vehicle mounted with anti-tank missiles – to the T-80U main battle tank, in service from 1985 onwards.

Nozick's Libertarian Project Mark D. Friedman,2011-03-17 Elaborating on and defending a rigorous, rights-based libertarianism, Mark D. Friedman here develops the seminal ideas articulated by Robert Nozick in his landmark work *Anarchy, State and Utopia*. Consolidating more than three decades of scholarly and popular writing to have emerged in the wake of Nozick's text, Friedman offers a 21st century defense of the minimal libertarian state. In the course of this analysis, and drawing on further insights offered by the work of F.A. Hayek, Nozick's Libertarian Project shows that natural rights libertarianism can offer convincing answers to the fundamental questions that lie at the heart of political theory. The book also rebuts many of the most common criticisms to have been levelled at this worldview, including those from left libertarians and from egalitarians such as G.A. Cohen.

Cold War Armored Fighting Vehicles George Bradford,2010-10-21 Technical artist and military historian George Bradford covers the Cold War, from the end of World War II through 1990.

Weapons and Equipment of the Warsaw Pact Russell Phillips,2018-10-10 When East and West survived on a knife-edge between peace and war, both sides were busy preparing themselves for military action. But what exactly would NATO's troops have faced if the Cold War had suddenly turned hot? This ebook box set contains the first three books of the Weapons and Equipment of the Warsaw Pact series: Tanks and Combat Vehicles of the Warsaw Pact, Combat Engineering Equipment of the Warsaw Pact, and Artillery of the Warsaw Pact.

A History of Soviet Airborne Forces David M. Glantz,2019-11-12 For almost 70 years Soviet and Russian military theorists have been fascinated with the concept of airborne operations. Now Russian theorists tackle the problems posed to such operations by high-precision weaponry. This work, using newly released and formerly classified Soviet and East German archives, provides a detailed record of the performance of Soviet airborne forces during peace and war.

Air-Mech-Strike David L. Grange,B. G. (R) Huba Wass de Czege,L. T. C. Richard D. Liebert USAR,Charles A. Jarnot,2002 This book outlines how to reorganize the U.S. Army into a fully 2 and 3-Dimensional maneuver capable, ground force with terrain-agile, armored fighting vehicles sized to rapidly deploy by fixed-wing and rotary-wing aircraft to the scene of world conflicts and strike at the heart of freedom's enemies. The plan to build the Army into Air-Mech-Strike Forces, exploiting emerging information-age technologies, as well as America's supremacy in aircraft and helicopter delivery systems---at the lowest cost to the taxpayers, is described in detail. These Army warfighting organizations, using existing and some newly purchased equipment, will shape the battlefield to America's advantage, preserving the peace before it is lost; if not, then winning fights that must be fought quickly. The dangerous world we live in moves by the speed of the AIR, and the 21st Century U.S. Army 2D/3D combat team will dominate this medium by Air-Mech-Strike!

The Great Bear at War Chris McNab,2019-11-28 A History of the Red Army, Soviet Army and Russian Army in 100 Years of Conflict From the chaos of the civil war to the political manoeuvring of the Cold War, Russia's armed forces have shaped the future not only of Russia but of countless other countries around the globe. The Great Bear at War: The Russian and Soviet Army, 1917–Present explores the development and struggles of Soviet and Russian armed forces across the numerous conflicts which mark its history. It charts the great historical events that have defined the Red/Russian Army, especially World War II and the Cold War, but also the post-communist insurgencies and wars in which the Russian military has redeveloped its outlook and mission. The post-Soviet development of the Russian military into a modern force is explored in detail, including its controversial campaigns in Chechnya (1999–2009), Georgia (2008), and Ukraine (from 2014). Sewn into the narrative are details about the equipment, uniforms, training, service conditions and weaponry of the Soviet/Russian soldiers, bringing personal experience and technological context to the broader history. At a time when the world is closely focused upon Russian military behaviour, The Great Bear at War is both timely and fascinating.

Soviet Airborne Forces 1930–91 David Campbell,2020-02-20 Established in 1932, the Vozdushno-desantnye voyska ('air-landing forces', or VDV) of the Red Army led the way in airborne doctrine and practice. Though they were initially handicapped by a lack of infrastructure, due in part to a turbulent political climate in the 1930s, they still conducted major drops during World War II, including at the Dnepr River in September 1943. After the war ended, the VDV became independent of the Air Force and were elevated to the role of strategic asset. The newly rebuilt divisions were now organized and trained to conduct deep insertions behind enemy lines, attacking command-and-control facilities, lines of communication, and key infrastructure targets such as nuclear power plants. This training came into play in numerous Cold War confrontations, including Soviet operations in Hungary (1956) and Czechoslovakia (1968). During the Soviet war in Afghanistan (1979–89), the VDV proved to be the most formidable of the Mujahideen's opponents, with the development of the air assault concept – the transport, insertion and support of air-landed troops by helicopter rather than parachute. This title explores the development of the VDV from their conception in 1930 to their role in the Cold War and in the later invasion of Afghanistan. Supported by contemporary photography and specially commissioned artwork of uniforms and battlescenes, this title is a comprehensive and engaging guide to the history of airborne forces in the Soviet period.
