Selling AWACS to Saudi Arabia Nicholas Laham,2002-09-30 The AWACS debate represents one of the most critical and controversial events in the history of American diplomacy and legislative politics. It locked the Reagan administration and opponents of the AWACS sale in a fierce and pitched battle over American policy in the most economically and strategically vital region in the world: the Middle East. Accordingly, Laham finds there are at least five political lessons to be drawn from the debate. First, contrary to the arguments of its critics in Congress, the pro-Israel lobby does not control American policy in the Middle East. Second, the Senate tends to defer to the authority of the president on matters of foreign policy and national security. Third, while remaining a passive president overall, Reagan was among the most active of chief executives on issues involving the economy and national security. Fourth, given the enormous contribution the AWACS sale made to the vital economic and national security interests of the United States, Reagan's masterful handling of this politically explosive issue provides evidence that he displayed attributes of presidential greatness, but much further study of the other major foreign and domestic policy issues Reagan confronted during his tenure in office will be required before any definitive judgment can be rendered concerning where he stands in the ranking of America's 42 presidents. Fifth, the AWACS debate shows that the United States need not sacrifice its special relationship with Israel in order to forge stronger ties with Saudi Arabia. This analysis will be of particular interest to scholars, students, and policy makers involved with national security issues, presidential politics, interest groups, and Middle East studies.

*Combat Support Operations* A. B. S. Chaudhry,2012 India received the first of its contracted Airborne Warning and Control Systems (AWACS) on May 25, 2009, which was formally inducted by Defence Minister A.K. Antony on May 28, 2009. With the induction of the AWACS, India joined a club of only six other nations-the US, Russia, Britain, Japan, Australia and Turkey-that operate such a sophisticated system. The induction of AWACS was eagerly awaited mainly because of its capability to support the nation's politico military strategy in more ways than one. The dominant role of AWACS in air defence operations needs no emphasis, but in addition to air defence, its importance lies in the strategic capabilities that it engenders for national security. That, perhaps, is the reason for an increasing number of nations evaluating and acquiring different versions of airborne early warning systems to meet their national security requirements. The importance of AWACS for national security stems from its capability to provide strategic, operational and tactical solutions, and battlefield intelligence-all from one platform. In addition to typical air defence operations, AWACS have been utilised for power projection, peace enforcement, instruments of coercive diplomacy! and as a strategic C4I and battle management platform!, etc. There are many issues related to AWACS beyond air defence. Where does the operational role finish and strategic importance begin to take over? Are there areas of overlap and do both roles overshadow each other? What would be the effectiveness of AWACS in mountainous terrain? Will it be able to effectively support battlefield air interdiction missions, close air support missions and provide extensive early warning as is expected from AWACS? The next question could be, If the adversary also acquires AWACS, what would be the implications for a nation in conditions of AWACS symmetry? This book will attempt to cover the evolution and operational employment of AWACS in air defence operations and highlight its strategic role in national security. It would then compare AWACS with other air defence systems, study the constraints of AWACS operations in mountainous terrain, how many systems would be needed, the implications for India in case of AWACS symmetry, and some of the viable and cost effective options that will not replace AWACS, but complement its operations for a developing country like ours.

Soviet-Russian AWACS Aircraft Yefim Gordon,Dmitriy Komissarov,2010 The need to ensure effective protection of the Soviet airspace in areas lacking adequate cover by ground radars led the nation's aircraft designers to start working on airborne early warning systems. The Tupolev OKB was the first among the nation's aircraft design bureaus to create an 'eye in the sky', evolving the Tu-126 AEW aircraft from the Tu-114 long-haul turboprop airliner. The aircraft entered service in 1961, filling an important role with the Soviet Air Force until replaced in the early 1980s by the Ilyushin/ Beriyev A-50 AWACS based on the IL-76MD transport. In addition to these two types, the book describes the highly unorthodox Antonov An-71 with its tail-mounted rotodome (intended for operations from a large aircraft carrier which eventually never materialized) and the Kamov Ka-31 shipboard AEW helicopter. Due mention is also made of projects that never got off the drawing board the Tu-156, IL-150 and Yakovlev Yak-44.

Technology and the Air Force Jacob Neufeld,2009-06 Proceedings of a symposium co-sponsored by the Air Force Historical Foundation and the Air Force History and Museums Program. The symposium covered relevant Air Force technologies ranging from the turbo-jet revolution of the 1930s to the stealth revolution of the 1990s. Illustrations.

**Weapons Acquisition: DoD Should Strengthen Policies for Assessing Technical Data Needs to Support Weapon Systems** ,2006 Army and the Air Force have encountered limitations in their sustainment plans for some fielded weapon systems because they lacked needed technical data rights. The lack of technical data rights has limited the services flexibility to make changes to sustainment plans that are aimed at achieving cost savings and meeting

legislative requirements regarding depot maintenance capabilities. During our review we identified seven Army and Air Force weapon system programs where these military services encountered limitations in implementing revisions to sustainment plans C-17 aircraft, F-22 aircraft, C-130J aircraft, Up-armored High- Mobility Multipurpose Wheeled Vehicle (HMMWV), Stryker family of vehicles, Airborne Warning and Control System (AWACS) aircraft, and M4 carbine. Although the circumstances surrounding each case were unique, earlier decisions made on technical data rights during system acquisition were cited as a primary reason for the limitations subsequently encountered. As a result of the limitations encountered due to the lack of technical data rights, the services had to alter their plans for developing maintenance capability at public depots, new sources of supply to increase production, or competitive offers for the acquisition of spare parts and components to reduce sustainment costs. For example, the Air Force identified a need to develop a capability to perform maintenance on the C-17 at government depots but lacked the requisite technical data rights. Consequently, the Air Force is seeking to form partnerships with C-17 subvendors to develop its depot maintenance capability. Its efforts to form these partnerships have had mixed results, according to Air Force officials, because some sub-vendors have declined to provide the needed technical data.
